During the period of notice the Contracting Authority may direct the Supplier to perform all or any of the work under the Contract. Where the Contracting Authority has invoked either of these rights, the Supplier may claim reasonable costs necessarily and properly incurred by him as a result of the termination or reduction, excluding loss of profit, provided that the claim shall not exceed the total cost of the Contract. The Supplier shall have a duty to mitigate its costs and shall on request provide proof of expenditure for any compensation claimed

2. Requirement

Corporate Finance Interim Support Scope of Work and Delivery Methodology

This scope of work is for a lead adviser, producing presentations and papers to help shape BEIS's thinking on the process, market engagement and business models going forward.

In most cases the methodology will be as follows:

- Discuss the scope of the paper, presentation or advice required with the relevant parties at BEIS so that the requirements are clear and particular concerns, policy issues and constraints are factored into the analysis
- Develop the detailed paper or presentation, largely working independently, but consulting as necessary
- Present and discuss the draft paper at either the weekly Carbon Capture and Storage (CCS) management team meeting or specific workshops established for that topic
- Refine the paper in light of comments

BEIS Scope of Works

Particular comments on precedents and methodology in relation to the scope of work are included below. The supplier will be expected to deliver on the following:

1. Supporting BEIS in scoping out a programme of activity which would include; developing an understanding of the time needed to develop a high level (focusing on the minimum required) commercial framework for Carbon Capture, Usage and Storage (CCUS) transport and storage networks; and a proposed engagement strategy with high level communication messages for use with potential CCUS projects. This will need to align with the Industrial Decarbonisation Challenge (IDC) scheme, phase 2 (which is due to open in May 2020 and conclude in August 2020) with award potentially made in November. This would include providing written advice and answers on questions from BEIS on the nature of the CCUS Advisory Group's Transport and Storage model for CO₂.
 - a. End April.

Output. A defined timetable setting out proposals of potential steps for BEIS to consider in developing its work leading up to November 2020 and a high level outline communications handling proposal with key messages for use in engaging with potential CCUS project clusters.

2. Scope out and establish appropriate conditions precedent, which should include a summary of pros and cons from Her Majesty's Government's perspective, to align industry Front End Engineering Design (FEED) investment decisions and development of ongoing CCUS business models and the development of outline commercial frameworks. This is to include reasoning and justification as to why those proposed

conditions precedent are appropriate and relevant. This is to be provided in the form of written document that can be used to develop internal advice as required.

End April. Document setting out the rationale for including conditions precedent as part of the ongoing BEIS work associated with industry FEED investment decisions. The requirement and rationale for each condition precedent should be clearly explained and set out, supported by an analysis of the pros and cons for including or not including.

Programme planning

Provide advice on BEIS's development of a long-term work programme to facilitate deployment, involving Legal, Financial, and Technical advisors, to be established in Q2 2020 with the first phase running up to financial close for initial projects.

End April. Options paper summarising the nature of proposed activities and possible key work packages that BEIS should consider undertaking/commissioning from external advisors as part of its CCUS programme. Subject to an initial discussion to be held, this could include key areas of financial modelling that might be required for example.

Scoping an engagement plan with industrial clusters on the long-term programme for deployment. This should identify key commercial stakeholders within each cluster and finance providers where BEIS does not yet have this information. This should aim to conclude by the end of April in the form of an options paper.

Commercial frameworks

Providing input into the high-level specifications and requirements/areas to be included in a high-level commercial framework for CO₂ transport and storage. This should be completed by the end of April with an options paper setting out the required high level specifications with rationale for their inclusion with and assessment of the implications for not including them.

Providing initial bespoke corporate finance scoping advice on the options for deploying CCUS, including the potential to establish a Government company to build, own (potentially in partnership with industry), and operate a CO₂ transport and storage network, with the potential for future privatisation once the industry is established. A high level options paper should be completed by the end April setting out possible options for achieving such a body with a summary of the high level pros and cons of each approach.

The output should incorporate known business models, knowledge of private sector requirements and a review of the approach to derive benefit from their strategic interest in progressing CCS.

Corporate finance advice on the high-level outline and scope out requirements for a financial model that can be established to assess the financial implications of CO₂ T&S fees and impacts on CO₂ emitters building on BEIS' in house T&S model.

Completion should be targeted for the end April with an options paper setting out matters that BEIS should consider when developing a financial model to assess the financial implications of CO₂ transport and storage fees and impacts on CO₂ emitters.

Provide advice on the nature of the corporate finance frameworks required to establish complex contractual arrangements within a CCUS cluster, between different stakeholders of

differing levels of maturity and complexity across power, industry and hydrogen applications and financial risk appetites. This advice should be in the form of a discussion paper for BEIS that could be used to develop advice for internal use as required.

Provide advice in the form of a discussion paper on considerations on cluster prioritisation, in particular proposing engagement strategies in light of the March 2020 Budget and input into the IDC bid evaluation criteria. This could also include scoping out matters to consider when establishing cluster value for money and affordability assessment criteria and maintaining competitive tension. This will include developing criteria and governance to be adopted by successful bidders to demonstrate value for money.

3. Commercials

The total value of this contract is up to £90,000.00 excluding VAT as per the breakdown of costs detailed below:

██ The contract is time based and subject to the requirements set by BEIS. The outline of the proposed work in the contract is time based, and is based on an estimate of 2-3 days week. The supplier will provide a forecast and breakdown of work undertaken on a regular basis i.e. 1-2 weeks subject to the requirements set by BEIS.
