Annex 2 – Specification

Ribonucleic Acid (RNA) Transcriptomics For Assessing The Effects Of Chemicals In The Environment

1. Background to Requirement

The Environment Agency is a key delivery partner for the Defra 25 Year Environment Plan. The EA have been monitoring data for over 1500 chemicals that can be used to measure exposure at a single point in time, but there are no suitable measures of the effects on aquatic fauna or flora caused by that exposure.

The Outcome Indicator H4 on the exposure and effects of chemicals on wildlife therefore requires development of novel effects indicators to demonstrate effects at the level of the individual that can be used to predict sub-lethal effects in aquatic organisms caused by exposure to chemical mixtures. The effects measures need to be robust, easily adoptable by a regulator and provide demonstrable environmental protection.

Mixture effects are critical to understanding ecological impacts in the environment, as individuals are never exposed to single compounds in isolation, but all ecotoxicological data used to determine safe thresholds are based on exposure of a very small number of species under controlled experimental conditions using good laboratory practice standards. This leads to uncertainty in predicting impacts based on published Predicted No Effect Concentrations used to determine Environmental Quality Standards. This work will contribute to the development of an organism-based indicator to determine *in-situ* and in-laboratory culture effects and help to predict the scale of natural population impacts.

Previous work carried out for this programme has included sampling aquatic invertebrates from different locations, to determine whole genome RNA transcriptomics differences. This work highlighted the critical requirement for high quality whole genome sequences for aquatic invertebrates and work is ongoing to elucidate the genome of the Mayfly, *Ephemera danica* that will be complete in Autumn 2022.

This project will link into the EA Catchment Sensitive Farming network, where work to reduce pesticide contamination of surface and groundwaters has led to significant improvements in water quality. Data from twice weekly water sampling will be used, in addition to further development of passive sampler deployment to enable detection of most compounds present in surface flowing water at these 8 sites. This project also links to PFAS and PFoA monitoring in fish, that will be carried out at some of the same sampling sites. This will permit assessment of RNA transcriptomics responses to PFAS substances in aquatic invertebrates, including how PFAS interact with other chemicals to multiply any long term impacts.

This work links with stakeholders' interests through Defra Pesticide Policy colleagues, the Chemicals Regulatory Division of the Health and Safety Executive, Devolved Authorities and NGOs. For the first time we will be able to assess the chronic effects of mixtures of chemicals at sites where NGO interest is high, and we will be able to respond based on evidence, allowing the EA to demonstrate proactive protection of the

environment. This research will be applicable to chemical manufacturers, enabling a rapid screening of potential impacts in the environment, and providing such data to competent authorities relevant to new active ingredient approvals.

We appreciate this is a new area of research for regulatory tools, and a variety of skills will be required, so we will accept bids from a lead partner with collaborators to adequately cover the diverse range of skills required.

It will be important for bidders to fully comprehend the scope and basis of this project, and potential bidders are encouraged to discuss the project in detail with the project manager prior to submitting a tender.

2. Specific Objectives/Deliverables

This is an outcome-based specification, where project deliverables are critical. These may not be achievable in full due to the novel approach we intend to take, but we expect creativity and innovation in the approach to delivering the objectives with us in good time and within budget.

Objective 1: To undertake an assessment of the effects on RNA transcriptomics on Mayfly (or suitable alternative species) of 10 substances identified as high toxicity from spot sampling at Catchment Sensitive Farming sites

The experiments to be conducted will create a quasi-dose response curve for individual chemicals under controlled laboratory conditions. Reports should include significant changes in RNA expression due to exposure at measured annual median concentrations (data to be provided), corrected for environmental conditions, and identify the inflexion point concentration on the curve at which effects from chemical exposure may be considered insignificant. Given the various toxicities of each substance we would expect the lowest exposure dose to be at or below the predicted no-effect concentration (PNEC) (to be agreed at the start of the project), and the highest concentration tested to be at least 10 times the measured annual median concentration. This will ensure coverage of all relevant environmental exposure scenarios and cover aspects of sub-lethal exposure that may be investigated further.

Careful consideration should be paid to explaining how controls will be used in experiments to minimise effects due to other experimental factors including but not exclusively limited to, water chemistry, nutrient status, sediment interactions and temperature.

We expect this project to open opportunities for parallel research in understanding ecological responses to chemical exposure and will take this into consideration during the assessment of the quotation.

Deliverables will be:

- an annual report summarising expenditure, outputs, significant findings to date and implications for direction of the research in the next 12 months. These will be due every 14th February during the project.
- A monthly telephone call / video conference between the EA technical lead, EA project manager, and the successful contractor's project lead to highlight issues, update on progress and identify developing risks to the project.
- A three-monthly call with all project team members to discuss progress and propose workplans and milestones for the following 3 months.
- A final report and publications related to the project at the end of the project.
- Invoices to be submitted quarterly in arrears subject to satisfactory completion of the deliverables for this objective.

Objective 2: Determine the effects of mixtures of chemicals on RNA transcriptomic expression of Mayfly (or an alternative aquatic organism) under laboratory conditions.

The aim of this Objective is to understand if there are any specific interactions between chemicals in mixtures that lead to differences in the scale of change in RNA transcriptomics in aquatic invertebrates that may have long term chronic population effects, linking exposure to potential effects.

Using data from results gained for Objective 1, the successful Contractor will identify the 5 compounds most likely to change RNA transcriptomics of the chosen organisms, and the 5 least likely, splitting the group into 2 classes, group 1 and group 2 (see table below) . Recent work has shown that it is likely that the most toxic compound in the mixture accounts for most of the theoretical risk. The aim of this objective is to quantify the effects of mixtures, and to identify significant interactions between agrochemical classes (herbicide / insecticide / fungicide etc) on the effects on RNA transcriptomics.

- Undertake experiments to determine any additional / subtractive or synergistic interactions in RNA transcriptomic changes within and between the groups at the lowest concentration identified in Objective 1 that can be shown to significantly alter RNA transcriptomics.
- Undertake experiments to determine any additional / subtractive or synergistic interactions in RNA transcriptomic changes within and between the groups at the measured annual mean concentration derived from monitoring data to determine if significant effects result from exposure to mixtures at relevant environmental concentrations.
- The effects of mixtures should be further explored using combinations of paired compounds, groups of 3, 4 and 5 compounds to determine any additive effects. We expect to have as many interactions tested as possible within the constraints of the project.

Deliverables will be:

- an annual report summarising expenditure, outputs, significant findings to date and implications for direction of the research in the next 12 months. These will be due every 21st March during the project.
- A monthly telephone call / video conference between the EA technical lead, EA project manager, and the successful contractor's project lead to highlight issues, update on progress and identify developing risks to the project.
- A three-monthly call with all project team members to discuss progress and propose workplans and milestones for the following 3 months.
- A final report and publications related to the project at the end of the project.
- Invoices to be submitted quarterly in arrears subject to satisfactory completion of the deliverables for this objective.

Objective 3: Development of a rapid screening laboratory assay to measure RNA transcriptomics of natural water samples

The aim of this objective is to provide a laboratory assessment of trends over time for the effects of chemical contamination of surface water bodies. The concept of a standard assessment system for reporting ecological impacts at a sub-lethal level is new and will provide additional information for the Environment Agency to act proactively when environmental protection is required. We will use RNA transcriptomics to compare with standard biological assessments of invertebrate population health, delivering a refinement of our current ecological assessment regime.

We want to establish a laboratory assay system capable of providing data on changes in RNA transcriptomics due to exposure to several natural water samples already collected for other monitoring purposes. This should provide a snapshot of the chemical health of surface waters in England to drive action on priority areas and substances.

Deliverables will be:

- an annual report summarising expenditure, outputs, significant findings to date and implications for direction of the research in the next 12 months. These will be due every 15th February during the project.
- A monthly telephone call / video conference between the EA technical lead, EA project manager, and the successful contractor's project lead to highlight issues, update on progress and identify developing risks to the project.

- A three-monthly call with all project team members to discuss progress and propose workplans and milestones for the following 3 months.
- A final report and publications related to the project at the end of the project.
- Invoices to be submitted quarterly in arrears subject to satisfactory completion of the deliverables for this objective.

4	Future work plans, Implementation plans beyond project	Contractor	TBA	From mid-2024 onwards
5	Risk Register	Contractor	Excel Spreadsheet	By end Month 1 Reviewed monthly

4. Skills of Personnel Required

The key skills required for this project are:

- Evidence of research experience and publications in a relevant subject in high quality peer review journals in the areas related to this project
- Ability to demonstrate creative thinking around solutions to environmental problems
- Demonstrate a good working relationship with UK Government and arm's length authorities
- CVs of personnel will be required
- Evidence of sufficient laboratory capacity and skilled technical staff to undertake the project

5. Project Risks

In addition to the EA Risk register we will require a project risk register to be maintained by the successful Contractor's project lead, with reviews on a monthly basis throughout the project.

The key risk for the EA is guaranteed funding beyond the end of March 2024 and to mitigate this, the project must be divided in to separate one-year sections. These should include deliverables for each year.

Another major risk is that because this is a substantial project, we do not expect one organisation to be capable of completing the project, therefore we welcome responses from consortia with one project lead organisation to deal with financial and project management responsibilities if required.

3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.

4.2 Goods clauses

- (a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.
- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.
- (j) The Supplier will notify the Authority of any request that Goods are returned to it or the manufacturer after the discovery of safety issues or defects that might endanger health or hinder performance and shall indemnify the Authority against the costs arising as a result of any such request. Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.

(k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.

4.3 Services clauses

(a) Late delivery of the Services will be a breach of the Contract.

(b) The Supplier must co-operate with the Authority and third party suppliers on all aspects connected with the delivery of the Services and ensure that Supplier Staff comply with any reasonable instructions including any security requirements.

(c) The Authority must provide the Supplier Staff with reasonable access to its premises at such reasonable times agreed with the Authority for the purpose of supplying the Services.

(d) The Supplier must at its own risk and expense provide all equipment required to deliver the Services. (f) The Supplier must take all reasonable care to ensure performance does not disrupt the Authority's operations, employees or other contractors.

(g) On completion of the Services, the Supplier is responsible for leaving the Authority's premises in a clean, safe and tidy condition and making good any damage that it has caused to the Authority's premises or property, other than fair

wear and tear and any pre-existing cleanliness, safety or tidiness issue at the Authority's premises that existed before the commencement of the Term.

(h) The Supplier must ensure all Services, and anything used to deliver the Services, are of the required quality and free from damage or defects.

(i) The Authority is entitled to withhold payment for partially or undelivered Services or for Services which are not delivered in accordance with the Contract but doing so does not stop it from using its other rights under the Contract.

5. Pricing and payments

5.1 In exchange for the Deliverables delivered, the Supplier shall be entitled to invoice the Authority for the charges in Annex 3. The Supplier shall raise invoices promptly and in any event within 90 days from when the charges are due.

Details of the Authority's requirements for a valid invoice at the Start Date are set out in Annex 3.

5.5 If there is a dispute between the Parties as to the amount invoiced, the Authority shall pay the undisputed amount. The Supplier shall not suspend the provision of the Deliverables unless the Supplier is entitled to terminate the Contract for a failure to pay undisputed sums in accordance with clause 11.6. Any disputed amounts shall be resolved through the dispute resolution procedure detailed in clause 35.

5.6 If any sum of money is recoverable from or payable by the Supplier under the Contract (including any sum which the Supplier is liable to pay to the Authority in respect of any breach of the Contract), that sum may be deducted unilaterally by the Authority from any sum then due, or which may become due, to the Supplier under the Contract or under any other agreement or contract with the Authority. The Supplier

shall not be entitled to assert any credit, set-off or counterclaim against the Authority in order to justify withholding payment of any such amount in whole or in part.

5.7 The Supplier must ensure that its subcontractors and supply chain are paid, in full, within 30 days of receipt of a valid, undisputed invoice. If this doesn't happen, the Authority can publish the details of the late payment or non-payment.

6. The Authority's obligations to the Supplier

6.1 If the Supplier fails to comply with the Contract as a result of an Authority Cause:

(a) the Authority cannot terminate the Contract under clause 11 on account of the failure to comply, provided this will not prejudice the Authority's right to terminate for another cause that may exist at the same time;

(b) the Supplier will be relieved from liability for the performance of its obligations under the Contract to the extent that it is prevented from performing them by the Authority Cause and will be entitled to such reasonable and proven additional expenses that arise as a direct result of the Authority Cause;

- (b) as to the sustainability or health and safety conduct of the Supplier, subcontractors and supply chain in the performance of the Contract;

then the Authority may:

(i) require that the Supplier provide to the Authority (for its approval) a plan setting out how the Supplier will ensure continued performance of the Contract (in the case of (a)) or improve its sustainability conduct or performance (in the case of (b)) and the Supplier will make changes to such plan as reasonably required by the Authority and once it is agreed then the Supplier shall act in accordance with such plan and report to the Authority on demand

(ii) if the Supplier fails to provide a plan or fails to agree any changes which are requested by the Authority or materially fails to implement or provide updates on progress with the plan, terminate the Contract immediately for material breach (or on such date as the Authority notifies).
