Font specifications

Type specifications have been set as a guide to create a consistent look and feel to all Natural England publications.

As a general rule of thumb, please ensure the following:

- 1 All main body text is set in FF Megano Regular. Megano TF should only be used in tables.
- 2 The standard size for all main body text is 12pt on 15pt leading. Minimum type size is 11pt on 14pt leading.
- 3 Use Medium and Demi-bold sparingly to add emphasis and interest.
- 4 Headings should clearly have more emphasis than the main body text. They should be initial capital only. Do not use italics.

- 5 Use colour sparingly to add further emphasis and interest.

- 6 Reversed body text should be 12pt Megano medium on 15pt leading.

- 7 Photo credits should be in 7pt Megano regular, black or white whichever gives best contrast.

Standard text sizes

The following table defines font, point size and colour for most house style applications for the commonly used A4, A5 and $\frac{1}{3}$ A4 document sizes.

These are preferred sizes and can be varied when there is good reason to do so. However, some absolute minimums are defined, eg for body text.

Application	Weight	Colour	A4	A5	$\frac{1}{3}$ A4
Cover title	Medium	White/colour	34/38	24/26	18/20
Sub title	Regular	White/colour	22/24	16/18	14/16
Heading 1	Medium	White/colour	26/30	24/26	22/24
Heading 2	Medium	Colour	16/18	14/16	14/16
Heading 3	Demi-bold	Colour	12 (min 11)	12	12
Heading 4	Demi-bold	Black	12 (min 11)	12	12
Body text	Regular	Black	12/15	12	12
Body text [min]	Regular	Black	11/15	11	11
Reversed body text	Medium	White	12 (min 11)	12	12
Table title row [min]	Demi-bold	Black/White	11	11	11
Table body [min]	Regular	Black	11	11	11
Footnotes, Charts	Regular	Black	9	9	9
Captions, folios	Demi-bold	Black/White	9	9	9
Running head	Demi-bold	Black/colour	9	9	9
Photo credits	Regular	Black/White	7	7	7
Page numbers in 4x4 mm box	Demi-bold	White/Colour	9	9	9

Logo use

Positioning and sizing

When using the logo in printed or digital format, the guidance must be adhered to in order to maintain consistency.

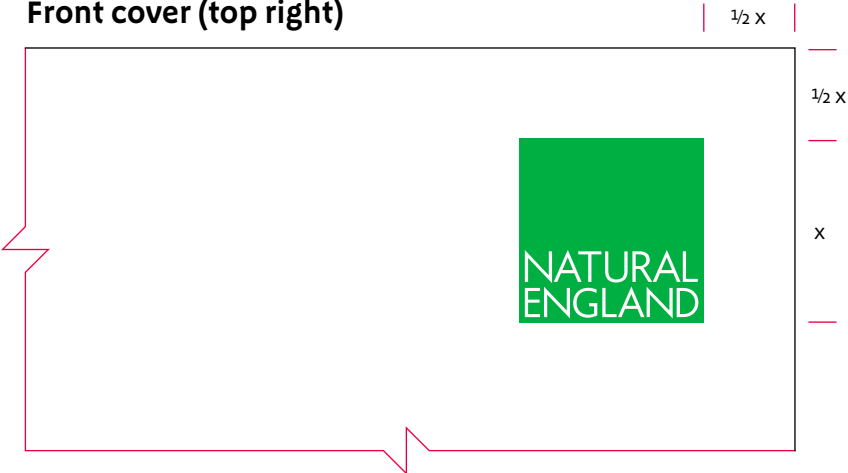

The logo must appear on the front of all Natural England publications.

It should always be placed top right or bottom right as illustrated on this page.

The size of the logo has been determined for all common print sizes up to A0, and should be adhered to at all times.

Please note that these sizes are applicable to both portrait and landscape formats.

Front cover (top right)

Front cover (bottom right)

Logo size for specific formats

A6	(105 x 148 mm)	18 mm
1/3 A4	(99 x 210 mm)	18 mm
A5	(148 x 210 mm)	21 mm
A5 sq	(148 x 148 mm)	21 mm
A4	(210 x 297 mm)	30 mm
A4 sq	(210 x 210 mm)	30 mm
A3	(297 x 420 mm)	44 mm
A2	(420 x 594 mm)	64 mm
A1	(594 x 841 mm)	92 mm
A0	(841 x 1189 mm)	130 mm

Back covers

Impress

The logo must always feature on the back cover of any Natural England publication, positioned as indicated.

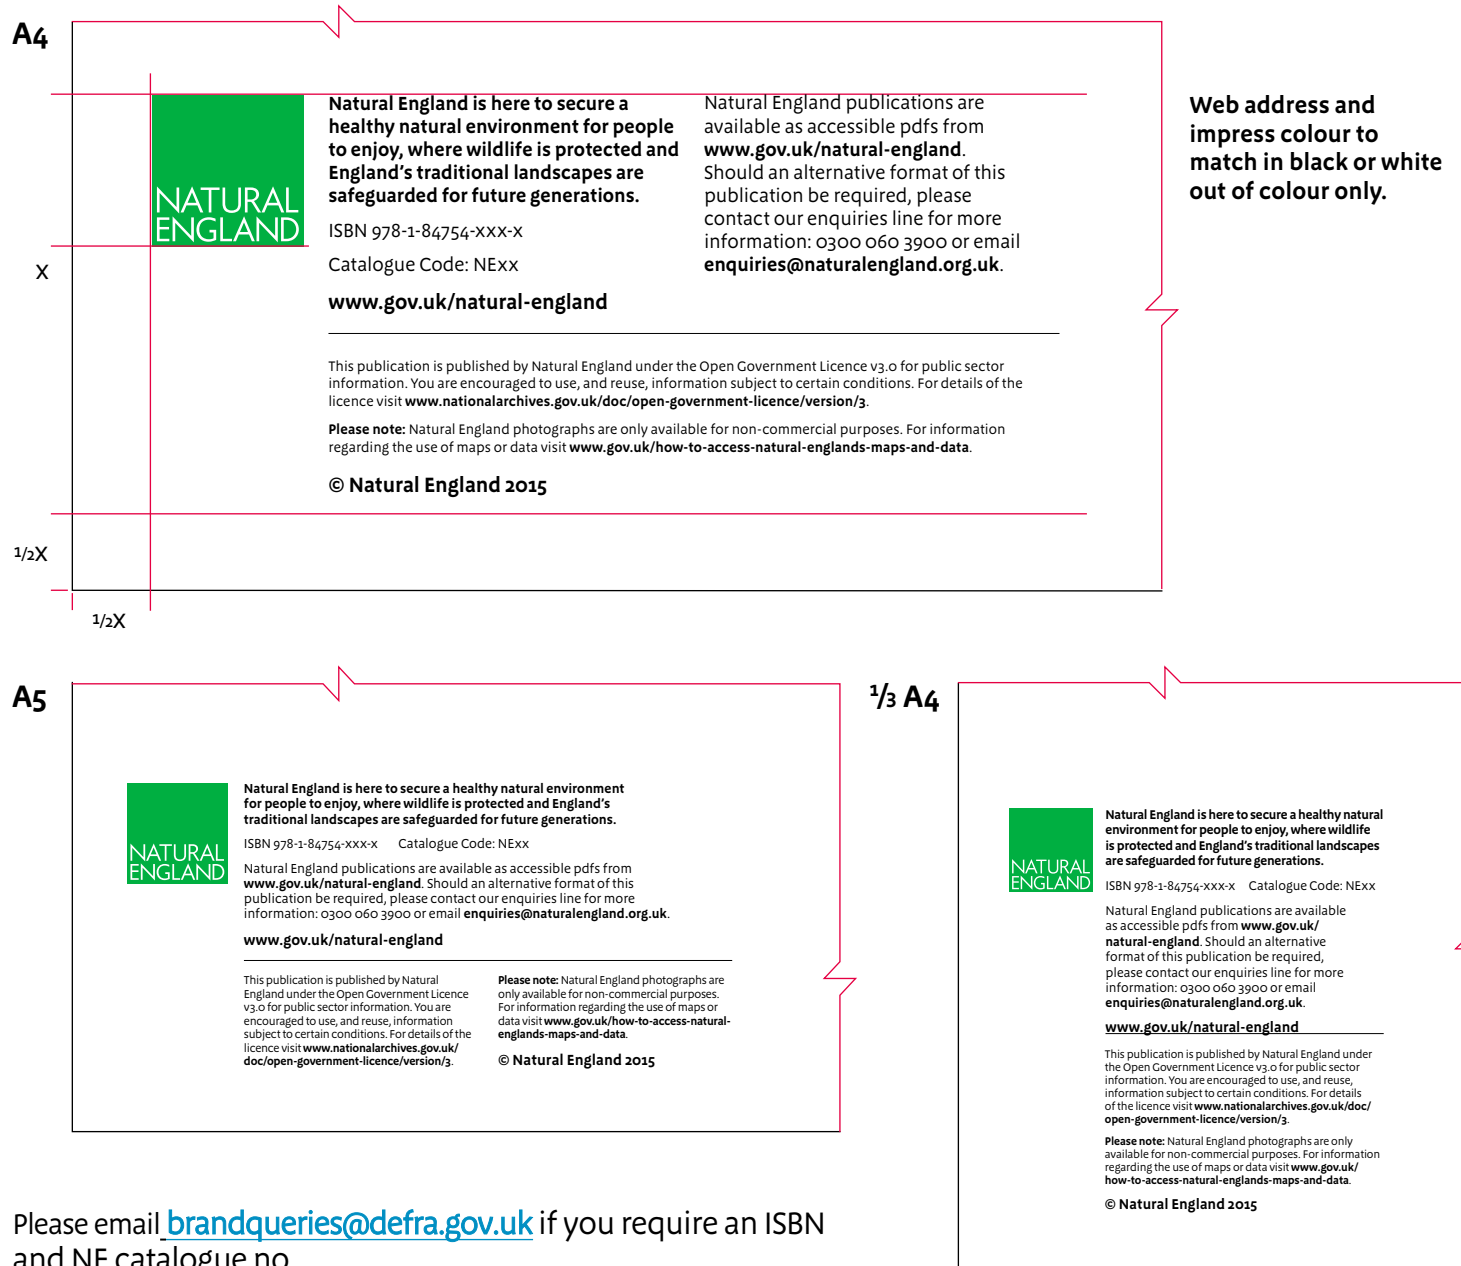

The size of the logo should be the same as on the front cover of the publications and should align with the top of the statutory information.

The positioning of the information should sit $\frac{1}{2}X$ from the bottom of the publication.

Impress body text is set in 11pt Megano Regular at A4, 10pt at A5, and 8pt on $\frac{1}{3}$ A4 documents. The web address is 12pt Megano Demi-bold on A4, 11pt on A5 and 9pt on $\frac{1}{3}$ A4 covers.

The Natural England standard impress block is available as artwork from Natural England design Unit.

Please note all of our external facing general publications are now required to carry both an ISBN and NE catalogue no, with the exception of short-shelf products eg. fliers, posters, newsletters etc.

Please email brandqueries@defra.gov.uk if you require an ISBN and NE catalogue no.

Font hierarchy

Headers and body text

This example shows font hierarchy for an A4 document.

Header 1 (section headers), Header 2 (sub headers) and Header 3 should be set in a colour from the corporate palette – normally the same colour as the cover swoosh and titles.

Header 4 (tertiary header) should be set in black or the alternative body text colour.

Base line grid for 12pt body text is set at increments of 15pt.

All templates are set up with 15pt baseline grids (**green**) and document grids aligned to ascender heights (**grey**). (In Normal view in InDesign press ⌘ to turn on/off document grid and ⌘ to turn on/off baseline grid.)

Header 1 Megano Medium 26pt on 30pt leading

Gap is equivalent to a double line space. Gap is equivalent to a double line space. Gap is equivalent to a double line space. Gap is equivalent to a double line space. Gap is equivalent to a double line space.

Header 2 Megano Medium 16pt on 18pt leading two lines max

Standard body text is Megano Regular 12pt with 15pt leading. Space before is 9pt. Tracking is set at zero and kerning set to optical. Body copy should always be aligned left and never hyphenated. Ligatures must be turned off.

Header 3 Megano Demi-bold 12pt

Standard body text is Megano Regular 12pt with 15pt leading. Tracking is set at zero and kerning set to optical. Body copy should always be aligned left and never hyphenated.

Header 4 Megano Demi-bold 12pt

Standard body text is Megano Regular 12pt with 15pt leading. Tracking is set at zero and kerning set to optical:

- See page 10 for more info regarding bullets
- left indent 5 mm, first line left indent -5 mm
- in the same colour as header
- and set at 12pt on 15pt leading
 - left line indent 8, first line left indent -3
 - in the same colour as header
 - and set at 12pt on 15pt leading

5 mm

Font hierarchy

Header 1

Examples show correct and incorrect use of header 1 within documents.

Set title within three vertical columns and over two lines

Font hierarchy

Header 2 – A4 docs

This example shows header 2 settings for an A4 document.

When lines of header 2 appear at the top of a page the ascenders should align to the top margin to maintain the structure of the page.

Spacings are the same for copy set out in single or double columns.

Using these paragraph spacings will allow for body copy to remain horizontally aligned.

<p>Two line header 2 at top of page ascender aligned to top margin</p> <p>'Space After' two line header 2 at top set at 9pt. Font hierarchy

Header 2 – A5 and 1/3 A4 docs

This example shows header 2 settings for A5 and 1/3 A4 documents. Header 2 settings for A5 and 1/3 A4 are set at 14pt Megano Medium on 16pt leading.

When lines of header 2 appear at the top of a page the ascenders should align to the top margin to maintain the structure of the page.

Spacings are the same for copy set out in single or double columns.

Using these paragraph spacings will allow for body copy to remain horizontally aligned.

Two line header 2 ascender aligned to top margin

'Space After' two line header 2 at top set at 12.5pt. Vel iureetue tem zzriure modolortie feum eugait lore do odolore do dunt vulla ad elesto ver summy nosto conum iriustie del et, sit la faci blan ut lorper acinisi.

Ut alisit duisis at lum vel ex feugait wisim in volore feumsan ut alisciduis am alit augait

Two line header 2 within copy 'Space Before' 18pt

One line 'Space Before' 19pt

'Space After' one line header 2 in copy set at 10pt. Re min vendreet aliquatum in veliquisl.

Font hierarchy

Bullet points

Bullets representing a list of single words or short sentences should not have a line space between them. Bullets representing longer, complex sentences or paragraphs should have a line space between each bullet. In all cases the introductory copy and the last line of the bullets should be followed by a line space.

Major bullets should be either Apple symbols font, (glyph unicode 25A0) or Wingdings font, (glyph unicode Fo6E) set at same size and leading as body copy.

Secondary bullets should be same glyph set at 7pt with same leading as body copy and a baseline shift of 1pt.

Should you not have either of these fonts paste a 2.5 mm or a 1.5 mm square into the body copy.

The following outcomes describe what we want to achieve for the natural environment over the next five years:

- A healthy natural environment.
- People are inspired to value and conserve the natural environment.
- Sustainable use of the natural environment.
- Secure the natural environment for the future.

Um in ullaore dui tie facilis adit il ing ero ex eugiamet wiscil in vel dui tis nonsectem nostisl ullaor sumsan er susciidipit praesendipit. Wiscil in vel dui tis nonsectem.

When booking a conference room, do the following:

- Confirm that the room has not already been booked on the day you require it.
- Request one of the following seating plan
 - horseshoe
 - theatre-style
 - rows.
- Organise suitable refreshments.

Within the plan we frequently use specific terms which might require explanation. These are:

- The natural environment, which includes all land, flora and fauna, freshwater and marine environments, geology and soils. It ranges from inner city gardens, to farmland, remote wilderness and high seas.
- Managing the natural environment includes our role in helping people enjoy it in towns as well as in the countryside and our statutory responsibilities for the management of particular wild species
- Geographic literacy which we use to describe our approach to understanding, mapping and prioritising our work to conserve, enhance and manage the natural environment in different areas of the country.

Font hierarchy

Page markers

Page numbers

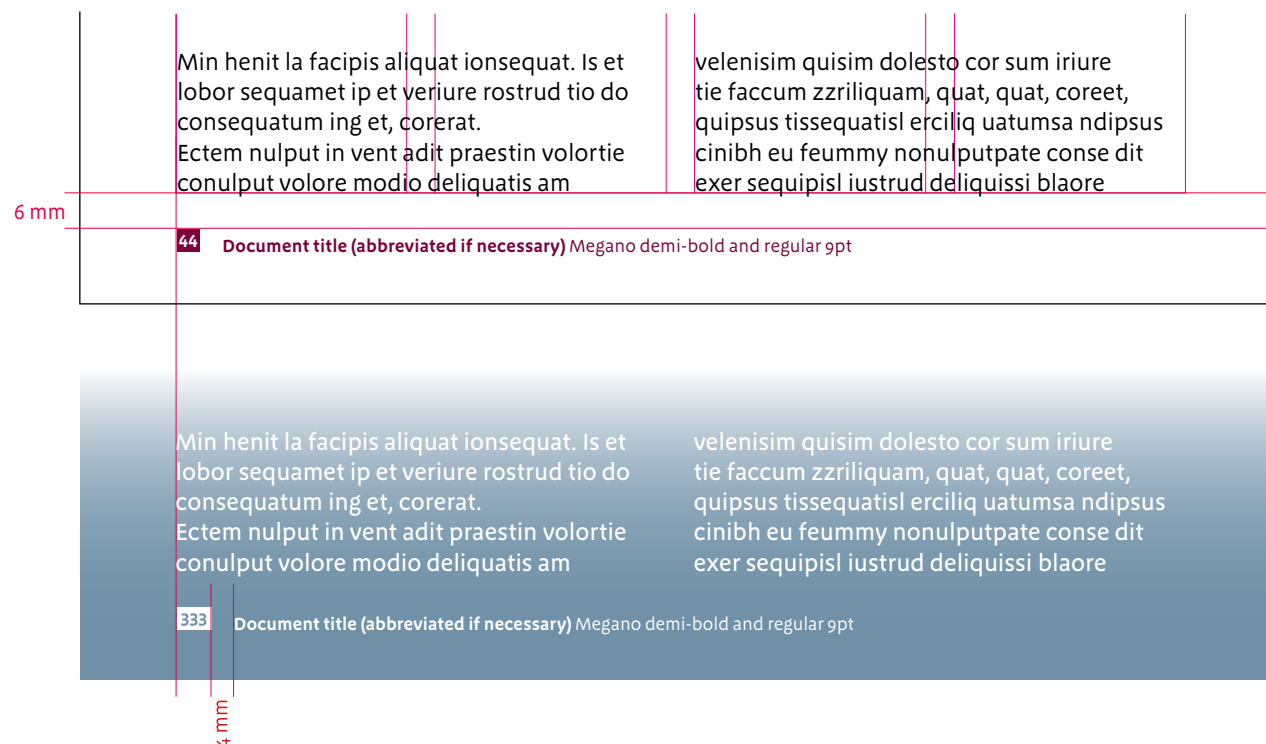

Page numbers are set in boxes 4 × 4 mm for number 1-99. On the few occasions a document goes over 99 pages please use a 4 x 6 mm rectangle.

They should be in a full colour from the colour palette or white when using full tint page. The text should be 9pt Megano Demi-bold in white or same colour as full tint page.

Running titles

Where possible the document title, abbreviated if necessary, should be added to the foot of the page, alongside the page number box, 4 mm to the left or right. Also set in 9pt Megano Demi-bold or Demi-bold **and** Regular (if using a sub heading) on the same baseline.

All literature templates are set up with page numbers and running titles.

Font hierarchy

Footnotes

Footnotes should be in Megano regular 10pt on 12pt leading. They should be set from the bottom margin of the page and seperated from body copy by two line spaces with a 1pt line in the same colour as the main document colour set on the baseline between.

The superscript number on the footnotes is set in Megano Demi-bold 12pt in red (C15 M100 Y100 Ko).

Superscript number within the body text is 14pt Megano Demi-bold set in red (C15 M100 Y100 Ko).

If using a full page background colour set superscript in white along with body copy.

Font hierarchy

Internal grid use

All document sizes have a specific internal grid on which to layout copy.

Copy can run across two, three or four vertical columns. Single vertical column text is reserved for breakout info or pull-quotes when using 3 column body copy.

Copy can either begin from the **top margin (T)** or, to create a document with greater white space, the **lower margin (L)**. This must be maintained throughout the document.

When starting copy from either margin align the ascender to the margin.

Details for all margins can be found in each relevant document size section.

Font hierarchy

Contents pages

Main section headings are Megano Medium 16pt on 18pt leading with space before of 18 pt.

Secondary section headings are Megano Regular 12pt on 15pt leading with a first line space before of 9pt.

Indent settings when using numbered headings are 14 mm, with first line left indent set at -14 mm.

Pull quotes and call-out info

Pull quotes and call-out info should be used sparingly to emphasise specific information.

They should be in the same colour as the main colour of the document.

The 27pt pull quotes should be reserved for A4 documents.

Avoid using straight quotation marks ("dumb" quotes) and use typographic quotation marks ("smart" quotes) instead.

A4 docs only

Pull quote Megano regular 27pt on 30pt leading with space before of 11pt. 60 - 80% tint. 	<p>Break-out supporting text Megano Demi-bold 9pt on 22pt leading. Top line ascender aligns with ascender of adjacent copy. Six lines maximum.</p>

Captions and credits

Full bleed images

When using an image that is full bleed/full page width try and leave two line spaces of body copy bewteen the bottom/top of the caption or bottom/top of the image if no caption is being used. In A5 and 1/3 A4 documents leave one line space.

Captions are 9pt Megano Demi-bold set on 12pt leading. Credits are 7pt Megano Regular and sit at 90° to the image top right hand corner. If the image is full bleed the credit sits 7 mm (3 mm for 1/3 A4 docs) from the top and right hand edges of the page.

Use black or white for captions/credits whichever provides best contrast. Should you find it difficult to achieve a satisfactory contrast, subtle use of the effect **Outer Glow** is permissable.

Full page image – caption top or bottom

Captions and credits

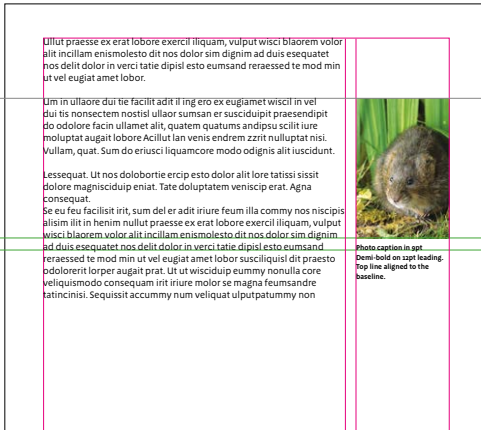

Images within margins

When using an image that is four vertical coumns wide leave two line spaces of body copy between the bottom/top of the caption or bottom/top of the image if no caption is being used. In A5 and 1/3 A4 documents leave one line space.

For images over two vertical columns leave one line space.

Use black or white for credits whichever provides best contrast. Subtle use of the effect **Outer Glow** is permissable should you find it difficult to achieve a satisfactory contrast.

Captions and credits as per previous page.

Text boxes

Styling

Three types of boxes are allowed for highlighted text within a document. They should match the width of vertical columns (either 2, 3 or 4) and they should align with the baseline grid of the document.

Larger text boxes should be used for case studies and should use tints of the primary or secondary colour palette as per page 19.

Smaller text boxes should be used for important highlighted information and should be a full tint of the primary or secondary colour palette with white out text.

In addition keyline text boxes may be used if an extra style is required. The keyline should be 1pt with stroke aligned to the inside in the same colour as the text box header.

Text boxes

Use of

Text boxes can straddle 2, 3 or 4 vertical columns of the internal document grid.

Text boxes that straddle 2 or 3 vertical columns must have one column of text which is set 5 mm from the left and right edges of the text box. Images can be 1 or 2 vertical columns wide in two column text box and 2 or 3 columns wide in a three column text box.

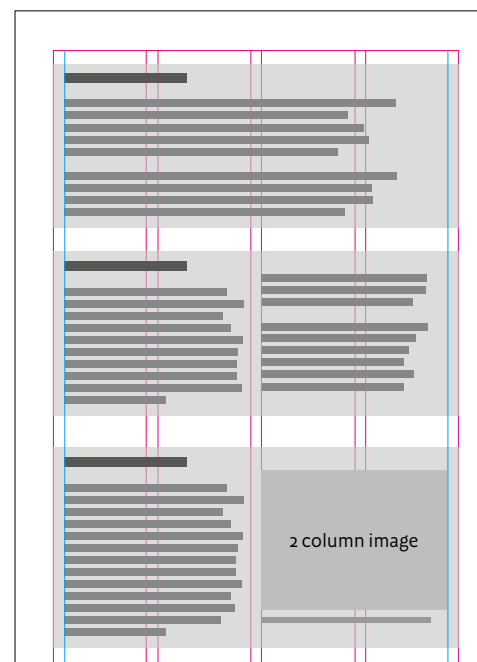

Text boxes that straddle 4 vertical columns can have single or two columns of text. Images can straddle 2, 3 or 4 vertical columns. If using a 4 column text box with 2 columns of text use the 5 mm page gutter.

The 5 mm insets are used only on outside edges of the box.

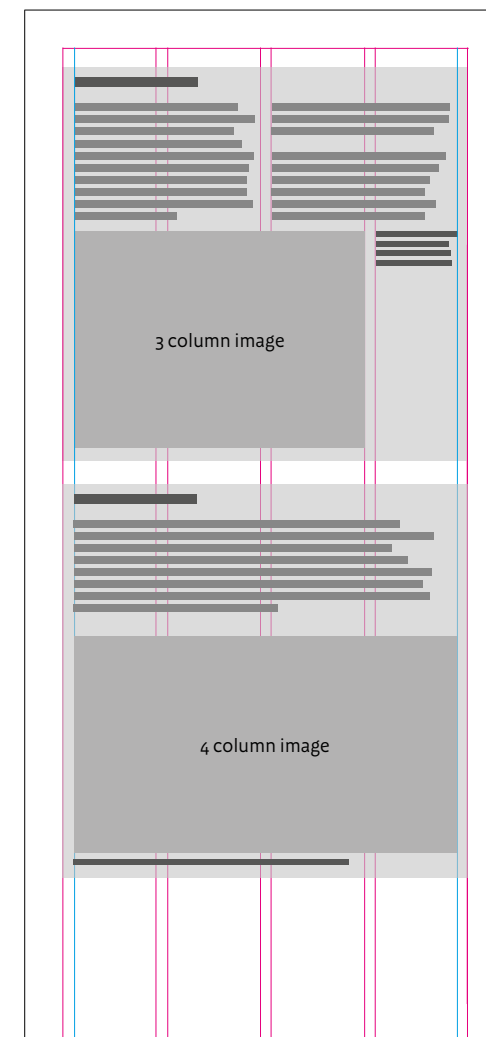

Two vertical column text boxes

Four vertical column text boxes

Three vertical column text boxes

Text boxes

Examples

In the examples on this page all the elements of the text box align to the base line grid apart from the top of the box which should be aligned to the ascender height of the line it falls in.

Tables

Use of

Title row should be 11pt Megano TF Demi-bold. Remaining text for rows should be 11pt Megano TF Regular on 14pt leading should two or more lines be required.

Line between rows and columns should be 1pt and white unless using the optional keyline version.

All measurements for tables were generated in Adobe Indesign.

First column header.
Text left aligned and aligned to the bottom of the cell with 2.2 mm bottom cell inset and left cell inset of 5 mm.

Column headers.
Text centre aligned and aligned to the bottom of the cell with 2.2 mm bottom cell inset.

9.5	Rud mod dolore	Sequat	Tation

Optional keyline table in black or any of the Natural England primary or secondary colours.

Measurements in millimetres

Examples

Maps should be professionally produced/designed to be as clear as possible. Avoid using maps generated directly from Geographical Information software (GIS) without any further editing in a graphics package.

Due to their bespoke nature it may not be possible to convey all the information within a map using the Natural England corporate palettes. If this is the case you may use other colours that illustrate the information more clearly. Please email brandqueries@defra.gov.uk if you need to discuss further colour options.

Charts

Examples

Charts should be simple and clear and may use any of the solid tints from our colours (including supplementary colours).

Arrange pie charts and bar charts so that colours that are similar tonally do not sit adjacent to each other. This is to avoid confusion when documents are printed on black and white printers.

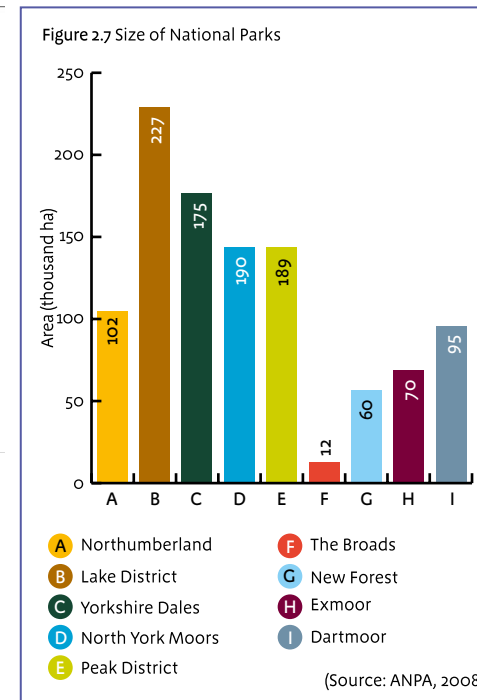

The key should be in the same order as the pie segments starting from the vertical line going clockwise.

All charts should be contained within 1pt text boxes in the same tint as the main tint used within the document. They should have a white interior to maintain clarity.

Minimum text size is 9pt. Stroke between pie segments is 0.5pt. Coloured dots are 4.5 mm wide.

Tables are not full size but are to scale.

If it is not possible to convey all the information within charts using the Natural England colour palettes you may use other colours. Please email brandqueries@defra.gov.uk if you need to discuss further colour options.

A4 documents

Cover grid with swoosh bottom

A set swoosh has been developed which is to be used on all A4 printed documents.

It is designed to be set approximately $\frac{1}{3}$ rd of the way up the page when using a standard length title.

If a publication has a lengthy title/sub title the curve may be moved up to accommodate it.

A cover with a single line title and without a sub-title should have a gap from bottom of curve to bottom of page of 99 mm.

All titles are set from the line 15 mm above logo and in no circumstances should titles appear below this area.

Space before the sub-title is set at 24pt or one line space.

Bottom swoosh on front and back cover

Double line title

Double line sub title

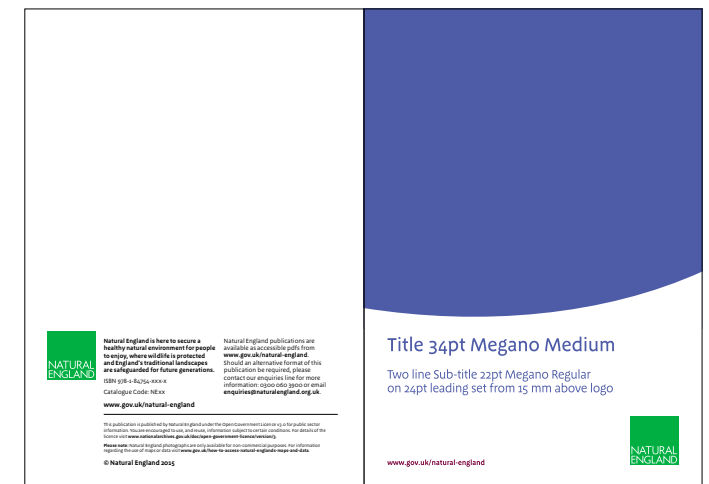

Indesign template **NE A4 swoosh bottom.zip** for designers is available from the Natural England project officer you are working with.

A4 documents

Cover styling with swoosh bottom

The left hand examples show the Natural England curve wrapping around the front and back cover using full tints of the Natural England colour palette.

The right hand examples show more simplified versions with the swoosh only on the front cover.

A4 documents

Cover grids with swoosh top

The Natural England logo must be 30 mm and be positioned ½X away from the top right corner.

Standard impress artwork is available from Natural England design Unit.

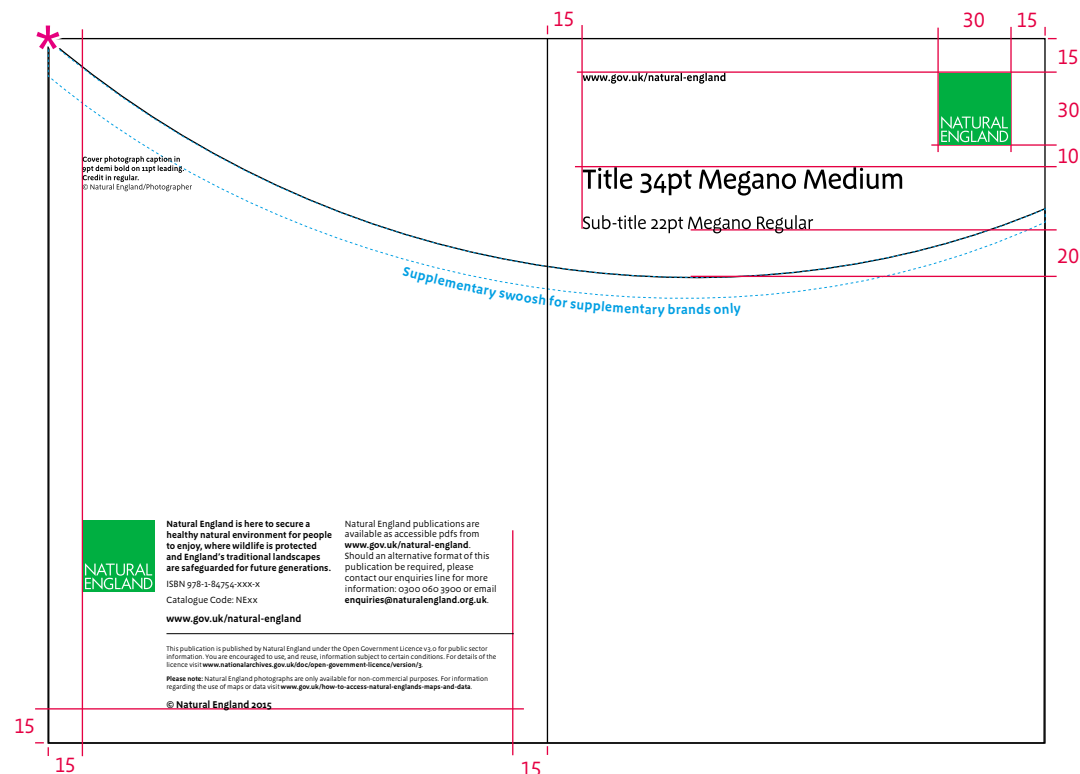

If a publication has a lengthy title/sub title the curve may be moved down to accommodate it.

All titles are set from the line 10 mm below the logo and in no circumstances should titles appear above this area.

If the cover has a one line title and no sub title set the curve from the top left hand corner of the back page (*).

Where possible, try to avoid titles and sub-titles that run underneath the logo.

Top swoosh on front and back cover

Double line title

Double line sub title

Indesign template **NE A4 swoosh top.zip** for designers is available from the Natural England project officer you are working with.

A4 documents

Cover styling with swoosh top

These are examples of ways in which the top 1/3 swoosh can be used on A4 portrait publications.

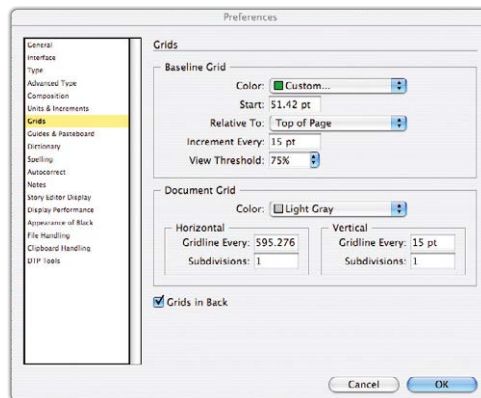

A4 documents

Internal sample grid

The A4 grid is based upon four vertical columns.

The grid is a necessary structure to maintain consistency. It also offers flexibility in the way it is used to create layouts, ensuring freshness within a uniform approach.

The **62.625 mm** and **bottom margin (19.5)** are dictated by the baseline grid. If using a baseline grid set **Start** to **51.42 pt**, **Relative To** to **Top of page** and **Increment Every** to **15 pt**.

All templates are set up with margins and baseline grid details.

Example spreads

The right hand examples show the grid system being used for more simplified designs in single or two column with Images generally within column widths.

The examples show how the grid can be employed to create both a two column and single column layout for A4 brochures.

A4 documents

Online only A4 portrait publications

In some instances It may be that your only option is to produce a an online only publication.

A4 portrait Online only publications should be set in one column to aid the user (it is difficult to read two column documents on screen) and create an ideal line length of between 75-100 characters. They should have hyperlinked contents and a hyperlink back to the contents on every page (either in the top or bottom margin).

They should also be correctly tagged so that screen readers read the content in the correct order and there are alternative tags for all none text items.

All other principles for document layout are as per these guidelines.

A4 documents

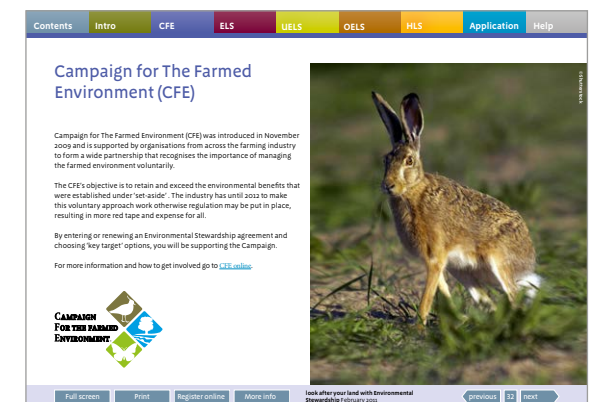

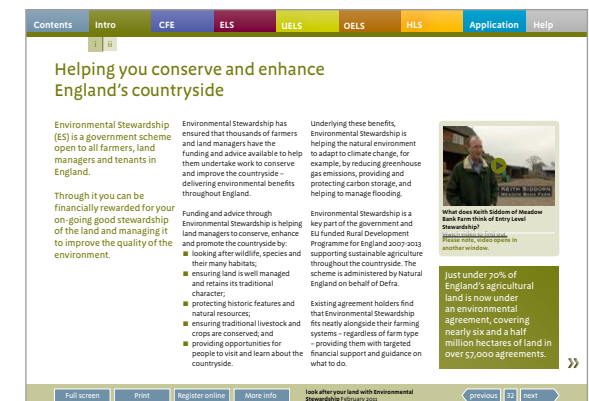

Tabbed online only A4 landscape publications

Another option for creating online only documents to produce an A4 landscape document. These documents are suitable as stand alone documents that aren't viewed in a web browser and are designed to take up as much of the screen as possible.

A4 landscape online only publications can be set in 2, 3 or 4 column and they should have interactive/hyperlinked tabs to aid navigation.

They should also be correctly tagged so that screen readers read the content in the correct order and there are alternative tags for all none text items.

All other principles for document layout are as per these guidelines.

Any queries regarding tabbed/online only pdf publications please contact brandqueries@defra.gov.uk

A5 portrait documents

Cover grids

Positioning and relationship of elements as per A4 front and back cover on page 26.

If the top swoosh cover has a one line title with no sub title set the curve in the top left corner of the back page (*).

If the bottom swoosh cover has a one line title with no sub title set the bottom of the curve 70 mm from the bottom of the page.

Space before the sub-title is set at 18pt or one line space.

Indesign templates **NE A5 portrait swoosh top.zip** and **NE A5 portrait swoosh bottom.zip** for designers is available from the Natural England project officer you are working with.

Top swoosh on front and back cover

Bottom swoosh on front and back cover

A5 portrait documents

Cover styling

These are examples of cover styling on A5 documents.

The same basic styling guidance applies as for A4 documents.

A5 portrait documents

Internal sample grid

The A5 grid is based upon four vertical columns.

The grid is a necessary structure to maintain consistency. It also offers flexibility in the way it is used to create layouts, ensuring freshness within a uniform approach.

The **42.75 mm** and **bottom margin (15.9)** are dictated by the baseline grid. If using a baseline grid set **Start to 40.1 pt, Relative To to Top of page** and **Increment Every to 15 pt**.

All templates are set up with margins and baseline grid details.

A5 portrait documents

Example spreads

The left hand examples show the Natural England grid system being used for more complex designs, using full bleed images and blocks of the Natural England palette colours. The swoosh is used alongside more complex text layouts that may include reversed text and columns.

The right hand examples show the grid system being used for more simplified designs in single or two column with Images generally within column widths.

The examples show how the grid can be employed to create both a two column and single column layout for A5 brochures.

A5 landscape documents

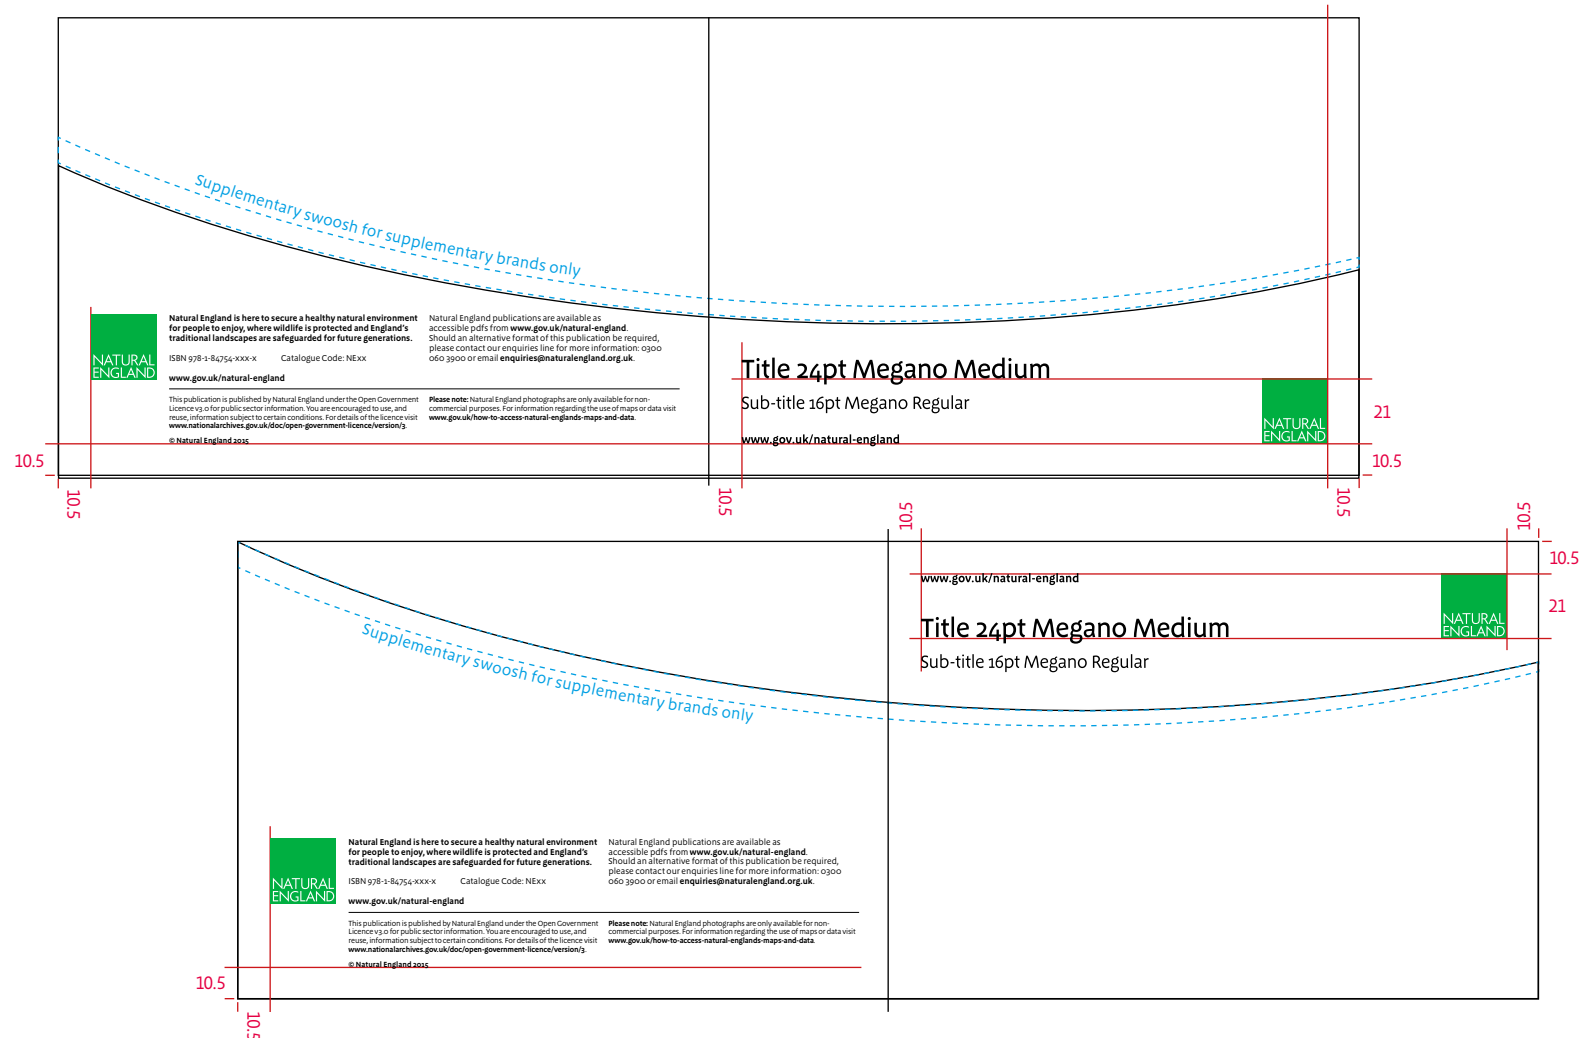

Cover grids

All landscape A5 leaflets are presumed to be promotional and public-facing.

The Natural England logo must be 21 mm and be positioned ½X away from the top or bottom right corner.

Because of limited space on the cover of a landscape A5 booklet space before the sub-title is set at 9pt.

Indesign templates **NE A5 landscape swoosh top.zip** and **NE A5 landscape swoosh bottom.zip** for designers is available from the Natural England project officer you are working with.

A5 landscape documents

Cover styling

These are examples of cover styling on A5 landscape documents.

The same basic styling guidance applies as for A4 documents.

A5 landscape documents

Internal sample grid

The A5 landscape grid is based upon four vertical columns.

The grid is a necessary structure to maintain consistency. It also offers flexibility in the way it is used to create layouts, ensuring freshness within a uniform approach.

The **44.75 mm** and **bottom margin (15.9)** are dictated by the baseline grid. If using a baseline grid set **Start to 45.75 pt, Relative To to Top of page** and **Increment Every to 15 pt**.

All templates are set up with margins and baseline grid details.

A5 landscape documents

Example spreads

The examples on this page show how the grid can be employed to create both a two column and single column layout for A5 brochures.

Always ensure that text is legible when used on a colour or reversed white out of a colour or image background. Reversed text should be a minimum 12pt Megano Medium.

1/3 A4 leaflets

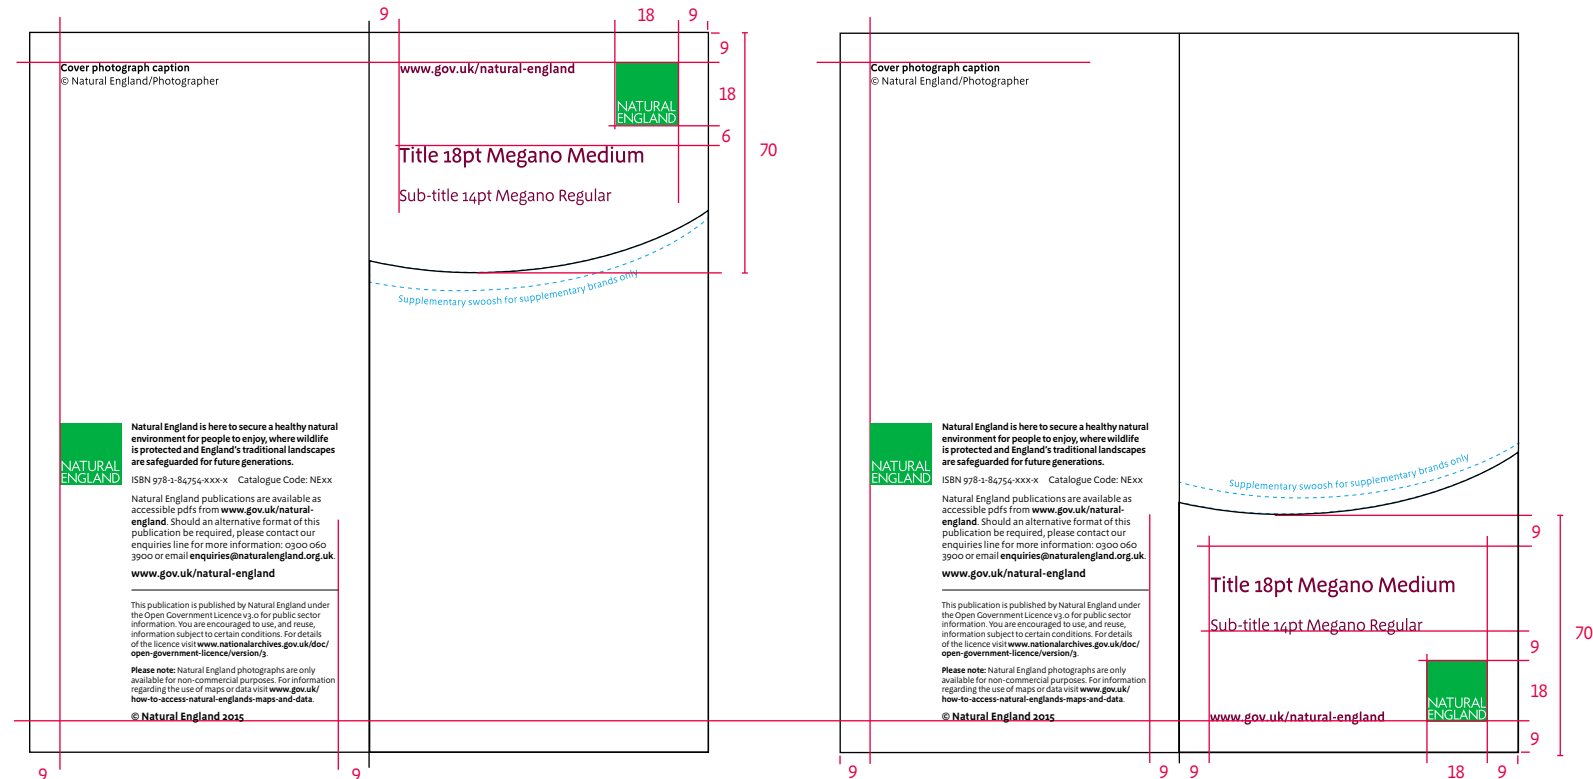

Cover grids

All 1/3 A4 leaflets are presumed to be promotional and public-facing.

The Natural England logo must be 18 mm and be positioned 1/2X away from the top or bottom right corner.

The impress block is set in one column on the back page of all 1/3 A4 leaflets. Standard artwork is available from the Natural England Graphics Unit.

6 and 4 page Indesign templates for 1/3 A4 leaflets for designers are available from the Natural England project officer you are working with.

1/3 A4 leaflets

Cover styling

1/3 A4 leaflets are used in the main for public-facing information/ guides and therefore should use library imagery. Imagery should be chosen that is relevant to the featured site.

Always establish how leaflets are to be displayed so that our logo is immediately visible and in a prominent position. For instance, if a leaflet is to be contained within a dispenser, the logo should be positioned at the top of the leaflet.

1/3 A4 leaflets

Internal sample grid

The grid is a necessary structure to keep consistency. It also offers flexibility in the way it is used to create layouts, ensuring freshness within a uniform approach.

It may not be necessary to use page numbering on a 1/3 A4 leaflet. If you decide not to use page numbering you may use a bottom margin of 11.5 mm which allows for an extra line of body copy.

All templates are set up with margins and baseline grid details.

1/3 A4 internal grid for four page or booklet style

1/3 A4 internal grid for six page or fly out on booklet style

If spread goes to three pages
this margin becomes 7 mm

1/3 A4 leaflets

Example spreads

1/3 A4 booklet style internal spread

Moor House - Upper Teesdale

On the backbone of England, around the headwaters of the River Tees, 8,800 hectares of upland country forms the Moor House-Upper Teesdale NNR.

The Reserve encompasses an almost complete range of upland habitats typical of the North Pennines, from lower lying haymeadows, rough grazing and juniper woods to limestone grassland, blanket bogs and the summit heaths of the high fells. Nowhere else in Britain is there such a diversity of rare habitats in one location.

The remote and dramatic landscape of Moor House-Upper Teesdale can be enjoyed from the Pennine Way National Trail, the Public Rights of Way network and on Open Access land. Three routes are suggested in this leaflet, suitable for a range of fitness levels. To find out more or to join one of our guided walks, events or volunteer days visit: www.naturalengland.org.uk

The NNR is covered by OS Outdoor Leisure maps OL31 North Pennines and OL19 Howgill Fells.

The Pennine Way alongside the River Tees between Widdabybank Farm and Cauldon Moor

1/3 A4 six page internal spread

English Longhorns

For centuries the English Longhorn was widely used as a general purpose animal providing labour, meat and milk. However, the breed was improved as a food animal in the 18th century and the Longhorn rapidly became the country's most popular source of beef. Unfortunately, the introduction of fast-maturing 'Shorthorn' cattle in the 19th century caused the Longhorn to go into decline, but enthusiasts kept the breed alive.

The Stoke herd

One such enthusiast was Wiltshire farmer, Robert Wales (a past president of the Longhorn Cattle Society) who created the 'Stoke' Longhorn herd in 1939. Named after the village of Winterbourne Stoke, this herd is now the oldest registered breeding herd of English Longhorns in existence.

After Mr Wales' death, the herd and most of his land passed to Natural England (through the NCC and English Nature). The land is now managed as Parsonage Down National Nature Reserve (NNR) and the Stoke herd is used extensively for conservation grazing.

Today, the Stoke herd comprises a stock bull, some 25 breeding cows, and followers. Cattle from the Stoke herd are regularly exhibited at major agricultural shows, both as ambassadors for Natural England and to

promote the importance of conservation grazing. They also help promote the value of the Longhorn breed itself, which is once again recognised as a source of quality beef.

Conservation grazing

As well as the Stoke herd, Parsonage Down NNR is home to a herd of commercial beef cattle and around 350 sheep. Cattle and sheep graze together on the chalk downland, creating wildlife rich grasslands that can contain up to 40 plant species per square metre.

Crazing is an important way of maintaining wildlife diversity, as unmanaged grassland sites are soon taken over by shrubby growth. English Longhorns are ideal conservation grazers. They are hardy, long lived and adapt easily to a wide range of vegetation: everything from rough pasture to saplings!

In recent years, cattle from the Stoke herd have been sold to graze wood pastures in Windsor Great Park and Epping Forest. Another twelve Stoke Longhorns have also been taken to Sherwood Forest to form the nucleus of a new herd. Here, the Longhorns will play a key part in an innovative grazing project, involving local landowners and Natural England, that will help conserve the forest's ancient wood pasture and heath.

The Cotswolds & Upper Thames Tributaries

Are you a farmer or landowner within the Cotswolds or Upper Thames Tributaries (UTT)?

Already in an environmental scheme or thinking about applying?

The Cotswold & UTT is a key target area for Environmental Stewardship, come along to our breakfast meeting and find out more.

The Programme

The Cotswolds & UTT target area is particularly important for its lowland hay meadows, wet grassland and distinctive ridge and furrow.

Environmental Stewardship offers you the resource and expertise to further enhance this area of outstanding natural beauty.

Come along and enjoy a "bacon buttie" with an update on both the Entry and Higher Level Environmental Stewardship schemes.

Talk informally to Natural England staff, farmers and local experts all with a working knowledge of both schemes.

Speakers

Anne Newson - NE local team advisor
George Fensmore - Home Farm, Clifton
Drew McVey - RSPB farm conservation advisor

1/3 A4 six page internal spread

Nature's infrastructure

At this time of great environmental change, we need nature more than ever in our history. Our health, wellbeing and happiness depends on it. A healthy natural environment provides us with a wide range of benefits which are essential for our long-term prosperity. We cannot afford to take nature for granted anymore.

What do we mean by 'ecosystem services'?

The term ecosystem services describes the many benefits we get from the natural environment - products like food, fibre, wood, and water; services like pollination, nutrient cycling, soil formation, water purification, flood defence and opportunities for reflection and recreation - all are critical for our wellbeing.

Dale rainbow

Mixed stocking on organic farms

Joining forces to close the deficit

A secure future, one which needs to value and safeguard ecosystem services, requires us to work together to provide those benefits. By combining our expertise and resources, land managers, public and private sector organisations can achieve more with less. Through three demonstration projects we will show that an integrated approach is the most efficient and effective way to deliver these services as key elements of viable land managing businesses.

So what's new?

These pilots are unique because:

- they will deliver multiple benefits: environmental, economic, social and cultural;
- we will change land and water management to do this.

Where and how will we work?

There are three pilot areas, one in each of three main upland areas of England. These areas are vital for carbon storage, flood risk management, water quality and supply, food and recreation, as well as being home to many rare and important species.

In each of these areas partnerships have been established to represent those responsible for securing benefits from ecosystem services. These partnerships will identify current and potential services provided by their particular area of upland, determine the value of these services and identify those who benefit. A greater understanding of these benefits will lead to new markets and ways of investing in the natural environment and land management, which will deliver more services, and a healthier natural environment, for less money.

Paper types

General

All publications should be printed on recycled paper containing as much post-consumer waste as practical.

Double sided printing should be used where possible.

Lamination on covers should be avoided.

Low-solvent or solvent-free products such as water based paints, varnishes and glues should be used, where possible.

Your requirement	Type of paper	Environmental requirement	Recommended weight
All standard uses including internal reports.	Photocopying and laser grade uncoated paper.	100% post-consumer waste, Elemental Chlorine Free (ECF).	80 gsm
Better quality than standard or where need is for good quality litho reproduction.	Matt, silk or gloss coated paper.	Minimum 75% recycled fibre comprising no more than 40% pre-consumer waste. Virgin fibre pulp content, preferably Totally Chlorine Free (TCF) or, less preferably, Elemental Chlorine Free (ECF).	Publications: Covers: 250-300 gsm Internal pages: 110 gsm Leaflets/Newsletters: 130 gsm Self cover/Flyers: 170 gsm Folders: 300 gsm
Durable report cover that will not easily mark.	Machine sealer varnish.	Water miscible sealer varnish (water based rather than solvent based).
