Project Background

The solution to be provided by the Supplier will be used to gather data from survey participants to support the Buyer's '*CIAB: Speak up and help beat coronavirus*' initiative. The data provided by members of the public who consent to participate in this study includes row-level health data, and as a result the solution must meet the security and data privacy requirements outlined below. The data gathered is being used as part of a study to assess the potential uses of machine learning-based approaches to screening for COVID-19, and subsequently data quality and integrity are factors critical to the success of this initiative.

Scope

The Supplier will design, test, build, deploy, host and maintain an online form solution for the Buyer capable of recording audio and storing participant data. The Supplier will also design, test, build, deploy and maintain a secure API solution that the Buyer will use to transferring data to the Buyer's data and analytics environment for subsequent analysis.

The Supplier will provide multiple customised versions of the online form solution, tailored to different user groups and hosted on different page paths, with customisations made to the question wording and flow as per the requirements of the Buyer (see 'Support and Maintenance' section below).

Timeline

The form solution must be ready for go-live on 4th August 2021. The data collection and run support period will last for six months from this date. The go-live date will be met on a best-effendeavours basis by the Supplier. Given the short timescales it may be necessary to prioritise functionality to build an MVP (minimum viable product) replicating the Alpha solution to go live by this date, with progressive enhancements released afterwards to meet the required Beta specification. Any agreed delay to the go-live date or change in scope is to be agreed between the Buyer and Supplier and would reduce the effective run support period after go-live, maintaining the same contract end date.

Solution Requirements

User Interface

1. The solution should be accessible to end users via common web browsers on mobile and desktop.
2. Question types that need to be supported, with mandatory and non-mandatory variants, are:

4. Audio recordings should be limited to 20 seconds in length, be recorded at a 48kHz sample rate and persisted in a .wav file format (see detailed audio requirements below). Only one audio recording should be persisted for each question per submission
5. A barcode and QR code scanner should be included for digitising the Test Kit ID via the device's camera
6. Users will be directed to the solution via publicly accessible URL. The URL address is to be agreed between the Supplier and the Buyer during the design sprint, and is to be purchased and hosted by the Supplier. The solution will direct users from specific user groups to particular variants of the form, located at different URL paths
7. The solution UI design should be simple with NHS Test and Trace branding and adhere to the GOV.UK design patterns
8. The solution must support gathering longitudinal study data by generating unique participant codes on first submission of the form that can be used by individuals to provide repeat submissions over time. The unique participant codes should be emailed to the study participant by the Supplier upon completion of the survey, but the participant's email address should not be retained for data privacy reasons
