Statement of Requirements

1. BACKGROUND AND REQUIREMENT

1.1 1710 NAS provide Front Line Commands, Flight Safety and other Forward and Depth customers with diagnostic and prognostic monitoring programmes for military aircraft engine and transmission systems. Such programmes are a mandated requirement of Military Aviation Authority (MAA) Manual of Maintenance and Processes MAP-01

1.2 Wear debris monitoring programmes enable force elements at readiness (FE@R) for the Front Line Commands, ensuring and maximising, the continued and safe operation of MOD air assets. Rapid sample turnaround time is a key enabler for FE@R, and a capability gap presently exists for forward deployed aircraft. 1710 NAS wish to conduct technology and capability trials using a self-contained, portable Laser Induced Breakdown Spectrometer as part of a wider investigation into forward deployed analytical capability.

2. DETAILED SPECIFICATION

2.1 General Requirements.

2.2 The instrument is to conduct materials analysis using Laser Induced Breakdown Spectroscopy.

2.3 The instrument must meet the requirements of IEC 60825-1 for a class 1 LASER product.

2.4 The instrument must be practicably portable with physical dimensions no greater than 50cm x 50cm x 50cm, a maximum weight of 25kg, and require no services other than mains electricity.

1. Analytical Capability.

3.1 The instrument must be capable of measurements in accordance with ASTM D8182-18: Standard Test Method for Alloy Classification of Wear Debris using Laser Induced Breakdown Spectroscopy.

3.2 The instrument must be capable of automatically identifying and analysing the material composition and (two dimensional) surface area of all discrete particles greater than 75µm x 75µm (length x breadth) in size, present on a self-adhesive sample patch, having a surface area of at least 1cm².

3.3 As a minimum requirement, the instrument must be capable of reliably identifying samples having an elemental composition consistent with the 23 tested alloys and metals detailed in ASTM D8182-18, Table 1. The instrument must also have a learning facility to enable the operator to add further alloys to the instrument's materials library.

It is desirable for the instrument to be able to operate in 'unknown material' mode and to provide the relative abundances of elements present in metal alloys not resident within material libraries. The supplier is to state the analytical capability of the instrument in this regard.
