The following matters will be included in the Early Warning Register

To fully explore the viability of Natural Flood Management, additional surveys and assessments may be required.

If it is found that GI works are needed within a SSSI and/or SPA/SAC, then an Appendix 3 (SSSI assent) and/or HRA would be required.

Review of information available may find that a CCTV survey of the Markham Brook tributary culvert is required at OBC stage.

Review of existing information may find that a topographic survey is required at OBC stage.

For Markham Brook Pumping Station, following information review and visual site visit intrusive/specialist surveys may be required.

If the preferred option alters and becomes higher environmental risk a Preliminary Environmental Information Report (PEIR), Indicative Landscape Plan (ILP), Environmental Site Appraisal Plan (ESAP) etc... may be required.

Atkins will look at the metrics to achieve good BNG target for the OBC stage. It may found during OBC development that additional assessments and surveys are required.

If it is determined that materials required for public meetings and stakeholder meetings are more than the work in progress as part of delivery of the OBC then additional drawings and/or specialist engagement software may be required.

Consultation to confirm the requirement for a Habitat Regulations Assessment (Stage 1 Assessment) for the overall project may find that this activity is required at OBC stage.
