EXECUTIVE SUMMARY

Objectives	
Wheal Jane Consultancy was commissioned by MeiLoc Landscape Architects to undertake an environmental risk assessment for a proposed development.	
Site Setting	
Current Use	The site is currently open recreational land.
History	There was extensive mining industry surrounding the site through the 19th and 20th centuries. In 1879, there were 6 active mines and 6 inactive mines within 2000m of the site, the closest being Wheal Gerry, 150m to the West. These mines were accompanied with extensive stream works, engine houses, shafts, heaps/tips, and railroads. The mines and other industry slowly dwindled during the 20th century, with South Crofty being the last mine to close, closing in 1998 and being marked as inactive on maps in 2016.
Geology	The geological map indicates that the site is underlain by the Mylor Slate Formation of Devonian age formed between 382.7 and 358.9 million years ago.
Controlled Waters	The site possesses a very low RoFRaS Flood Rating (Risk of Flooding from Rivers and the Sea).
Radon	Development is within an area where greater than 30% of properties are above the action level for Radon.
Conclusions	
<ul style="list-style-type: none">• Development is within an area where greater than 30% of properties are above the action level for Radon. However, due to the lack of residents and permanent dwellings in the proposed plans, the risks associated with this are significantly lowered.• Levels of naturally occurring arsenic are likely to exceed the relevant guideline value of 170mg/kg (for public park end uses).• The closest historic works were located 75m NE. Despite the subsequent development in the area and presence of hardstanding in this area, the abundance of historic works means, a contamination pathway may be present.• Due to the abundance of historical landfill sites, as well as the handling of special waste and liquid sludge, a contaminated pathway may be present.• The Category 3 (Minor Impact) pollution incident that occurred in 1999 presents a low risk to human health due to the isolated nature and low severity.• The abundance of Industrial Land Use in the area presents a moderate risk to human health as a contaminated pathway may be present• The presence of a Gas Storage Cylinder 2m North of the site in early maps presents a moderate risk to human health.	

Park Gerry at Park Rd, Camborne, TR14 8QB

- The usage of land immediately North of the site as a military facility is considered a moderate/low risk to human health, due to the decreasing activity in the facility in recent decades.
- An Active Fuel Station is present 213m S of the site. Due to the distance and intervening hardstanding, it is unlikely a contaminated pathway exists, and this is therefore considered a low risk to human health.
- It can be concluded that the site is likely to be suitable for the proposed development, once the recommendations contained within this report have been implemented.

Recommendations

- It is recommended that a Phase II Site Investigation be implemented in order to identify, quantify, and delineate any potential areas of contamination on site. The Phase II Site Investigation should also include a geotechnical assessment of the site.
 - The Phase II Investigation will be aimed at identifying possible sources of contamination highlighted in the Preliminary Conceptual Model.
 - Full radon protective measures are required for any relevant proposed structures in-line with BRE guidelines.
 - In the event unexpected contamination is found during development, work should cease until the material can be identified and remediated appropriately.
 - All site workers should be equipped with the correct PPE and have undertaken suitable risk assessments, job safety and environmental analysis before work commences.
 - Waste material to be removed from site should be handled by a suitably licensed waste contractor
-
-

1 INTRODUCTION

1.1 General

- 1.1.1 Wheal Jane Consultancy was commissioned by MeiLoco Landscape Architects to undertake an environmental risk assessment at the site known as 'Park Gerry at Park Rd, Camborne, TR14 8QB'. Wheal Jane Consultancy was formally instructed to proceed via email on the 31st October 2022.
- 1.1.2 This report has been prepared by Wheal Jane Consultancy solely for the benefit of the client. It shall not be relied upon or transferred to any third party without the prior written authorisation of Wheal Jane Consultancy.

1.2 Previous Reports

- 1.2.1 No previous land contamination reports are known to have been commissioned for this site.

1.3 Scope and Objectives

- 1.3.1 The Objective of this Desk Study is to examine past and present site conditions to identify any potential risk of contamination or ground instability resulting from historical and contemporary site usage. Any recommendations for further works have been made as deemed appropriate, based upon the findings of the investigation.
- 1.3.2 This assessment has been undertaken with guidance from BS10175:2011+A2:2017 and the UK government Land Contamination Risk Management (LCRM) framework published October 2020 (superseding Environment Agency report CLR11), and as such represents a Phase 1 Desk Study / Preliminary Risk Assessment.
- 1.3.3 This report does not constitute an asbestos inspection that may fall within the 'Control of Asbestos' regulations, 2006.
- 1.3.4 The conclusions and recommendations of this report are valid for a period of 12 months from the date of issue. Outside of this time frame the report will require reviewing by a suitably qualified geoenvironmental engineer / environmental scientist, to ensure that the report complies with any changes to industry standards, policies and/or guidelines.
- 1.3.5 It is recommended that a copy of this report be submitted to the local authority for checking, prior to commissioning any further work which may be required.

1.4 Information Sources

- 1.4.1 This assessment has been based upon mapping and information obtained from a number of trusted third-party sources. Although we only use information from trusted sources, Wheal Jane Consultancy cannot accept any responsibility for any inaccuracy of third-party information. The sources used in this assessment are listed below:
- Planning Applications PA22/00625/PREAPP and PA21/10223, 10m NW of the site.

Park Gerry at Park Rd, Camborne, TR14 8QB

- Landmark Environmental Data dated 10th November 2022.
- Historic mapping dated 10th November 2022.
- Zetica Unexploded Ordnance (UXO) risk map.
- BGS sheet 352, Falmouth

2 PHASE I ASSESSMENT

2.1 Site Location and Layout

- 2.1.1 The site is located off the A30 approximately 1.10km South-West of the Camborne (East) A30 junction. The site is situated within Camborne town. The site is approximately centred on National Grid Reference SX 165280 40640.
- 2.1.2 The site is irregular in shape and covers an area of approximately 3.79 Ha.
- 2.1.3 A site location plan (SLP) is contained in Figure 2.1, to the rear of the report.
- 2.1.4 The current site plan is contained in Figure 2.2, to the rear of the report.

2.2 Surrounding Area

Direction	Land Use
North	Residential
East	Residential
South	Residential
West	Residential

2.3 Site Walkover Survey

- 2.3.1 Wheel Jane Consultancy conducted a site walkover survey on 2nd November 2022. Photographs from the walkover survey are provided in Appendix A.
- 2.3.2 The site is currently a public park with no structures present. The park is split into three playing fields. Access is possible into each area through various breaks in the hedgerow.
- 2.3.3 The site is surfaced with grass throughout. There were no areas of surface water or soft spots encountered.
- 2.3.4 The site is mostly bound by residential properties.
- 2.3.5 The site can be accessed from various points around the perimeter.
- 2.3.6 Topographically speaking, the site slopes in a north easterly direction, with changes in elevation of approximately 5m across the site.
- 2.3.7 Mature trees are present across the site.
- 2.3.8 There were no visual or olfactory signs of contamination present at the time of the walkover survey.

2.4 Proposed Development

- 2.4.1 The project aims to re-invigorate the parkland to bring health and wellbeing benefits, and is to include: a skatepark, accessible pathways across the site with seating, Multi-Use Games Area (MUGA) plus outdoor gym/activity facilities, the creation of pavilion block and space for community hire, the re-instatement of football pitch, installation of public conveniences, a sensory garden and wildflower meadows, the provision of sufficient car parking, improved signage and wayfinding, an improved sense of security and safety
- 2.4.2 The proposed site plan is contained in Figure 2.3, to the rear of the report.

2.5 Site History

- 2.5.1 Using a range of historical mapping sources, an overview of the findings relating to the site and its surroundings can be found below in Table 2.1. Where maps of similar dates are provided (eg maps with differing scales) showing similar information, they may be summarised together.

Table 2.1: Summary of Historical Site Usage

Source	On Site	Surroundings
Cornwall & Isles of Scilly, 1877-1878, 1:500 (Incomplete)	The entirety of the site is unused open land, likely recreational.	Railroad running North/South (West Cornwall Railway) 100m E Coal Yard 165m SE Worked ground / mine refuse tips: 307m SE, 360m SE, 400m SE
Cornwall & Isles of Scilly, 1879-1880, 1:2,500	Unused open land. Three small buildings (Approx 3m x 3m) situated in the North of the site, around a small yard with road access.	Gasometer (Gas Storage) 2m N Armoury and Drill Yard (Military Centre) 15m N Duncans Shaft (Mineshaft) 75m NE Roskear Shaft 200m E Camborne-Redruth Railroad 600m S Mine Refuse Tips 250m N Mine Refuse Tip 750 W Tramway 1.0km E Arsenic Works (Active) 1.1km N Iron Foundry 1.2km E

Park Gerry at Park Rd, Camborne, TR14 8QB

Active mines and associated engines, shafts, and tips:

- Wheal Gerry 150m W,
- South Roskear Mine 300m NE,
- Dolcoath Mine 700m E,
- West Wheal Seton 700m N
- New Cook's Kitchen Mine 1.1km E,
- Cook's Kitchen Mine 1.4km E

Disused mines and associated engines, shafts, and tips:

- Camborne Vean Mine 850m S,
- North Roskear Mine 850m N,
- Carn Camborne Mine 1.1km S
- North Crofty Mine 1.2km NE
- West stray Park Mine 1.4km S
- Great Condurrow Mine 1.6km S

Stream Works (Active):

900m E, 1.0km NE, 1.2km N, 1.3 km N, 1.4km SE, 1.5 km NE

Cornwall & Isles of
Scilly, 1888,
1:10,560

No significant
change

No significant change

Park Gerry at Park Rd, Camborne, TR14 8QB

Cornwall & Isles of Scilly, 1908, 1:2,500	Three buildings and yard no longer present, N/S field boundary constructed across site.	South Roskear mine now disused.
---	---	---------------------------------

Cornwall & Isles of Scilly, 1938, 1:10,560	No significant change	West Wheal Seton now disused.
--	-----------------------	-------------------------------

Ordnance Survey Plan, 1963, 1:10,000	No significant change	Dolcoath Mine, Cook's Kitchen Mine, Wheal Gerry Mine now disused
--------------------------------------	-----------------------	--

Ordnance Survey Plan, 1967-1975, 1:10,000	No significant change	New Cook's Kitchen now active as South Crofty Mine
---	-----------------------	--

Ordnance Survey Plan, 1979, 1:10,000	No significant change	Wheal Gerry now disused. West Cornwall Railway dismantled. Tramway dismantled. A30 bypass constructed 600m N. Unspecified works constructed 400m S
--------------------------------------	-----------------------	--

Park Gerry at Park Rd, Camborne, TR14 8QB

Ordnance Survey Plan, 1980-1991, 1:10,000	No significant change	Stream working has ceased.
Additional SIMs, 1993, 1:1,250	No significant change	No significant change
Aerial Photo, 1999	Site is grassy with trees along field boundaries	No significant change
10k Raster Mapping, 2000, 1:10,000	Site is described as playing field on map	No significant change
Ordnance Survey, 2016, 10,000	No significant change	South Crofty Mine no longer active.
VectorMap Local, 2022, 10,000	No significant change	No significant change
Aerial Photo, 2022,	No significant change	No significant change

- 2.5.2 The site has been unused/recreational land since the earliest map (1887). Three small building and a yard were constructed in the north of the site in 1887 but they were demolished by 1908. The land is currently designated as a playing field.
- 2.5.3 There was extensive mining industry surrounding the site through the 19th and 20th centuries. In 1879, there were 6 active mines and 6 inactive mines within 2000m of the site, the closest being Wheal Gerry, 150m to the West. These mines were accompanied with extensive streamworks, engine houses, shafts, heaps/tips, and railroads. The mines and other industry slowly dwindled during the 20th century, with South Crofty being the last mine to close, closing in 1998 and being marked as inactive on maps in 2016.

2.6 Geological Setting

Table 2.2: Overview of the geological setting

Geology	
Reference has been made to the Published Geology (BGS sheet 352, Falmouth, 1:50,000), as well as the BGS online map viewer.	
Superficial Geology	The geological map shows no superficial deposits to be present on site.
Bedrock Geology	The geological map indicates that the site is underlain by the Mylor Slate Formation of Devonian age formed between 382.7 and 358.9 million years ago. The BGS describes this unit as 'Dark grey, locally green-grey slates, interbedded with thin bands and laminae of sandstone, graded and locally cross-bedded siltstone, basic lavas and sedimentary breccias.'
Geology from BGS Borehole Records/Previous Site Investigation Records	There is no evidence of BGS boreholes being available in this area.
Background Estimated Soil Chemistry	<ul style="list-style-type: none">- Arsenic: >120mg/kg Tellus SW map 200-400mg/kg- Cadmium: <1.8 mg/kg- Chromium: 90 - 120 mg/kg- Lead: 100-200 mg/kg- Nickel: 15-30 mg/kg Values for arsenic exceed guideline values for public park end uses, however arsenic is typically of low bioaccessibility (see Conceptual Site Model below). The values for other metals do not exceed guideline values for commercial or residential end uses.

Park Gerry at Park Rd, Camborne, TR14 8QB

Radon

The property is in a Radon Affected Area, as greater than 30% of properties are above the action level.

2.7 Environmental Setting

2.7.1 The table below outlines the key environmental settings relating to the site.

Table 2.3: Overview of the environmental setting

Hydrology/Surface Water	
Nearest Surface Water Feature	The nearest surface water feature is identified 491m East of the site, understood to be a small stream, part of the Red River catchment
OS Water Network	There are no Inland rivers present within 250m of the proposed development: There are no lakes, reservoirs or ponds present within 250m of the proposed development. There are no tidal rivers or streams within 250m of the proposed development.
Surface Water Abstractions	There is no active surface water abstraction licences within 1000m of the planned development.
Monitoring	There is no biological monitoring data within 500m of the site. No chemical monitoring data has been recorded within 500m of the site.
Hydrogeology/Groundwater	
Superficial Aquifer	No superficial aquifer is present
Bedrock Aquifer	The Mylor Slate Formation bedrock is classified as a Secondary A aquifer.
Source Protection Zones	The site is not located within a Source Protection zone
Groundwater Abstractions	There are four groundwater abstraction licence records within 1000m of the site: 611m NE, Small Garden, Borehole, 611m NE, Small Garden, Borehole, 673m N, Small Garden, Borehole, 673m N, Small Garden, Borehole,
Sensitive Land Uses	
Environmental	There is 1 Site of Special Scientific Interest (SSSI) within 2000m of the proposed development: West Cornwall Bryophytes (Natural England 2000365) – 679m SE There is 1 Local Nature Reserve within 2000m of the proposed development: Red River Valley – 977m NE

Park Gerry at Park Rd, Camborne, TR14 8QB

	<p>No National Nature Reserves, Special Protection Areas, Ramsar Sites, Special Areas of Conservation, Areas of Ancient Woodland, Areas of Outstanding Natural Beauty or Environmentally Sensitive Areas are within 2000m of the site.</p> <p>The proposed development is not within an existing Nitrate Vulnerable Zone (NVZ).</p>
Heritage/ Archaeological	<p>The site is within the Cornwall and West Devon Mining World Heritage Site. There are no archaeologically significant features in or around the immediate surroundings of the site.</p>
Other Environmental Information	
Contaminated Land	<p>No sites determined as Contaminated Land under Part 2A EPA 1990 are situated within 500m of the site.</p>
Waste	<p>There is one BGS Recorded landfill site within 1000m: 767m NE, Unknown</p>
	<p>There are five Environment Agency historic landfill site within 1000m: 398m N - Inert, Industrial, Commercial, Household 423m N - Unknown 609m NE - Inert, Industrial, Commercial, Household, Special Waste and Liquid Sludge 660m E – Unknown 927m NE, Unknown</p>
	<p>The is one active licensed waste management facility within 1000m: 433m S, Metal Recycling Sites (Mixed)</p>
	<p>There are 5 active discharge consent licences within 500m of the site, all concerning Sewage Discharge (Final Effluent) into Land Soakaways. 10m E, 32m NW, 154m SW, 325m W, 458m NW</p>
	<p>There are no Red List Discharge Consent licences within 500m of the site.</p>
Hazardous Substances	<p>There are no locations related to the control or handling of Hazardous Substances within 2000m of the site.</p>
Pollution Incidents	<p>There is one recorded pollution incident within 500m of the proposed development: 105m SW – 1999 - Contaminated Material (Fire Fighting Run-off) – Category 3 (Minor Impact)</p>
Flooding	<p>The site possesses a very low RoFRaS Flood Rating (Risk of Flooding from Rivers and the Sea).</p>
	<p>The site is not within 250m of a Zone 2 or Zone 3 Floodplain area</p>
	<p>There are no groundwater flooding susceptibility areas within 50m of the proposed development.</p>

Park Gerry at Park Rd, Camborne, TR14 8QB

Current Industrial Land Uses

There are seven current potentially contaminative activities identified by contemporary trade directory entries within 500m of the proposed development:

254m S, Dry Cleaning (Active)
278m Se, Garage Services (Active)
349m SE, Garage Services (Active)
367m N, Commercial Vehicle Dealers (Active)
420m SW, Garage Services (Active)
421m NE, Spraying – Paint & Coatings (Active)
429m S, Scrap Metal Merchants (Active)

There is one fuel station entry record within 500m of the proposed development:

213m S (Active)

There are 12 current potentially contaminative activities identified by commercial services directory entries within 500m of the proposed development. These include Vehicle Repair and Services, Metal Salvage and Recycling, and Storage and Haulage:

35m N, 43m S, 139m S, 190m S, 227m S, 258m S, 278m SE, 349m SE, 369m SE, 379m N, 430m S, 439m SW

Historic Industrial Land Uses

There are 26 historic potentially contaminative activities identified by contemporary trade directory entries within 500m of the proposed development:

25m SE, Glass Fibre Manufacturers (Inactive)
35m N, Garage Services (Inactive)
112m SE, Garage Services (Inactive)
166m S, Laundry Services (Inactive)
190m E, Garage Services (Inactive)
200m SE, Refrigerator and Freezers - Servicing & repairs (Inactive)
219m SW, Precision Engineers (Inactive)
252m S, General Engineers (Inactive)
252m S, Air Compressors (Inactive)
258m NE, Garage Services (Inactive)
265m SE, Garden Machinery, Sales & Services (Inactive)
279m SE Clothing and Fabrics – Manufacturing (Inactive)
311m NE, Marine Electronics Manufacturing (Inactive)
332m S, Rubbish Clearance (Inactive)
340m SE, Pest & Vermin Control (Inactive)
347m S, Woodburning Stoves (Inactive)
360m S, General Engineers (Inactive)
362 m W, Sailmakers and Repairers (Inactive)

Park Gerry at Park Rd, Camborne, TR14 8QB

	<p>379m N, Car Customisation and Conversion (Inactive)</p> <p>379m N, Boatbuilders and repairers (Inactive)</p> <p>379m N, Steam Cleaning (Inactive)</p> <p>379m N, Precision Engineers (Inactive)</p> <p>379m N, Commercial Vehicle Bodybuilders and Repairers (Inactive)</p> <p>428m SW, Jewellery Manufacturers and Repairers (Inactive)</p> <p>434m S, Agricultural Vehicles (Inactive)</p> <p>455m SE, Car Dealers (Inactive)</p> <p>497m SW, Builders' Merchants (Inactive)</p>
	<p>There are 7 historic potentially contaminative activities identified by manufacturing and production directory entries within 500m of the proposed development. Unless otherwise specified, listed are shafts or other mining works:</p> <p>273m NE, 301m N, 304m S, 351m NE, 421m N (Forge Industrial Park), 442m SE, 467m N</p>
Unexploded Ordnance (UXO)	<p>The risk to the site and its surroundings from the presence of UXO is low (see Appendix D).</p>
Archival Metalliferous Mining Search	<p>A Desktop mine search was completed by WJC in November 2022 Ref: MS42799. This is contained as Appendix E. The search concludes that the site is at significant risk and further work is recommended.</p>
Adjacent Planning Applications	<p>A Phase I investigation was carried out in 2021 by YES - Your Environmental Solutions, relating to PA21/10223, 10m NW of the site. This investigation involved a mining report completed by Wheal Jane Consultancy.</p> <p>The Phase I investigation concluded there to be a moderate risk to human health, controlled waters, and building materials, and recommended a Phase II site investigation should be carried out. There is no evidence in the submitted planning documents that this was carried out.</p> <p>The mining report concluded the risk of subsidence relating to past mining activity is significant and recommended a site investigation as a further action.</p>

3 PRELIMINARY CONCEPTUAL MODEL

3.1 Introduction

- 3.1.1 The Assessment of risk is based upon the principal of the pollutant linkage, which is described in more detail below. This assessment seeks to identify plausible pollutant linkages associated with the proposed development. Once this has been done, the resultant risk is determined based on the probability and the possible consequence of the pollutant linkages being present. As such, this qualitative risk assessment has been undertaken in accordance guidance published in Annex 4 of the National House Building Council/Environment Agency/Chartered Institute of Environmental Health R&D publication 66, Guidance for the Safe Development of Housing on Land Affected by Contamination (NHBC/EA/CIEH, 2008) which updates and supersedes CIRIA C552: Contaminated Land Risk Assessment, A Guide to Good Practice (Rudland et al., 2001).
- 3.1.2 A summary of the R&D66 risk classification matrix is presented below;

Table 3.1: Risk Classification Matrix

Risk Classification Matrix					
Taken from CIRIA C552		Consequence			
		Severe	Medium	Mild	Minor
Probability	High Likelihood	Very High	High	Moderate	Moderate / Low
	Likely	High	Moderate	Moderate / Low	Low
	Low Likelihood	Moderate	Moderate / Low	Low	Very Low
	Unlikely	Moderate / Low	Low	Very Low	Very Low

3.2 Preliminary Conceptual Site Model

- 3.2.1 This conceptual site model has been undertaken with due regard to guidance provided in BS10175:2011+A2:2017 and the LCRM framework. The assessment of risk from land contamination also pays due regard to the definition of contaminated land, as defined within Part 2A of the Environment Protection Act 1990. This legislation defines contaminated land as any land that is in such a condition that by reason of substances in, on or under the land:
- Significant harm is being caused or there is a significant possibility of such harm being caused; or

- Pollution of controlled water is being, or is likely to be, caused.

3.2.2 This definition is based on the principles of risk assessment defined as a combination of the probability (or frequency) of occurrence of a defined hazard and the magnitude (including the seriousness) of the consequences. Central to the risk assessment process is the concept of contaminant linkage, which is a linkage between a contaminant and a receptor by means of a pathway.

Table 3.2. Summary of statutory definitions relating to pollution linkage.

Statutory definitions relating to contaminant linkage.	
Contaminant	"a substance which is in, on or under the land and which has the potential to cause harm or to cause pollution of controlled waters."
Receptor	"a living organism, a group of living organisms, and ecological system or a piece of property" which meets given criteria. "controlled waters which are, or could be, polluted by a contaminant".
Pathway	"one or more routes or means by, or through, which a receptor: <ul style="list-style-type: none">• is being exposed to, or affected by, a contaminant, or• could be so exposed or affected".

3.2.3 Without the presence of all three components, there is no linkage and therefore no risk. The relationship between these components is discussed below in order to identify the existence of any source-pathway-receptor linkage on the site, and hence the potential risks associated with any contamination.

Table 3.3: Identified Sources, Pathways and Receptors

Source – Pathway – Receptor Overview	
Contaminant sources	Natural geology
	Mine Waste
	Historic Mining Works
	Landfill
	Pollution Incidents
	Industrial Land Use
	Gas Storage
	Military Centre

	<i>Fuel Station</i>
Pathways	<i>Inhalation of dust and vapours</i>
	<i>Dermal contact</i>
	<i>Ingestion</i>
	<i>Ingress into buildings</i>
	<i>Ground and surface waters</i>
Receptors	<i>Future site users</i>
	<i>Site workers</i>
	<i>Flora & Fauna</i>

- 3.2.4 From this table, the Conceptual Site Model can be derived. It outlines the critical pollutant linkages of concern for a particular land contamination problem. The development of the CSM is a primary planning tool that is used to organise information about the site and support the decision-making process in managing potentially contaminated sites. The matrix below makes up the initial CSM based on the data and information collated during the desk study and site walkover.

3.3 Preliminary Conceptual Site Model Matrix

Table 3.4: Preliminary Conceptual Model Matrix

Preliminary Conceptual Model							
	Source(s)	Contaminant(s)	Pathway(s)	Receptor(s)	Probability	Consequence	Risk Assessment
On Site	Natural Geology	Radon gas	Ingress into proposed buildings	Future site users	High Likelihood	Minor	Moderate / Low Risk. – Development is within an area where greater than 30% of properties are above the action level. However, due to the lack of permanent residents or dwellings in the proposed development, the risks associated with the build-up of Radon gas are significantly lower.
		Arsenic	Dermal contact Soil and dust ingestion and inhalation	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk – Estimated levels of arsenic within the soil were estimated at >120mg/kg in Envirocheck data and 200-400mg/kg using the Tellus SW Map. This exceeds the generic acceptance criteria for the public park setting of 170mg/kg. Soil sampling and testing on site is recommended.
Off Site	Infilled Land/Mine Wastage	Heavy Metals	Dermal contact Soil and dust ingestion and inhalation	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk –Estimated levels of arsenic within the soil were estimated at >120mg/kg in Envirocheck data and 200-400mg/kg using the Tellus SW Map. This exceeds the generic acceptance criteria for the public park setting of 170mg/kg. Soil sampling and testing on site is

						recommended. Levels of other metals may also be higher within mine waste materials.
Historic Mining Works/Shfts	Total Petroleum Hydrocarbons (TPH) Polycyclic Aromatic Hydrocarbons (PAH) Heavy Metals	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk – The closest historic works were located 150m W, at Wheal Gerry. The closest shaft is located 75m to the NE. Due to the close proximity, and abundance of mine workings in the area, a contaminated pathway may be present.
Landfill	Ground Gas: Methane, Carbon Dioxide, Leachate	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters Ingress into proposed buildings	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk – There are five historic landfill sites within 1000m. Due to the abundance of landfill sites, as well as the presence of a landfill handling special waste and liquid sludge, a contaminated pathway may be present,
Pollution Incidents	Various	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters	Future site users Site workers Site flora and fauna	Low Likelihood	Low	Low Risk – There is one recorded pollution incident with 500m of the site, occurring in 1999 due to firefighting run-off. The incident was classified as category 3 (Minor Impact), but due to its proximity to the site, as well as occurring on an equal elevation, a contaminated pathway may be present. However, due to the isolated nature and low severity of the incident, this is considered a low risk to human health.

Industrial Land Use	Total Petroleum Hydrocarbons (TPH) Polycyclic Aromatic Hydrocarbons (PAH)	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk- Due to the abundance of Industrial Land Use (A total of 52 current and historic Trading, Commercial and Manufacturing Directory Entries within 500m) it is likely a contaminated pathway exists.
Gas Storage	Ground Gas: Methane Total Petroleum Hydrocarbons (TPH) Polycyclic Aromatic Hydrocarbons (PAH)	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters Ingress into proposed buildings	Future site users Site workers Site flora and fauna	Likely	Medium	Moderate Risk- Beginning on the earliest Map (1879) a Gas Storage cylinder has been present on the 2m N of the site. It is unclear when it is decommissioned/demolished. Because of the longevity of the cylinder, as well as the proximity to the site, a contaminated pathway may be present.
Military Centre	Total Petroleum Hydrocarbons (TPH) Polycyclic Aromatic Hydrocarbons (PAH)	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters	Future site users Site workers Site flora and fauna	Likely	Mild	Moderate / Low Risk: The earliest maps indicate the northern edge of the site is bordered with a military facility, containing an Armoury, Drill Yard, and Flagstaff. This usage is somewhat ongoing to the present day, with the area currently being utilised as a Tactical Army Reserve Centre. This facility will have been potentially contaminative, and if so, it is likely a contamination pathway exists.

Fuel Station	Ground Gas: Methane Total Petroleum Hydrocarbons (TPH) Polycyclic Aromatic Hydrocarbons (PAH)	Dermal contact Soil and dust ingestion and inhalation Ground & surface waters Ingress into proposed buildings	Future site users Site workers Site flora and fauna	Unlikely	Medium	Low Risk – An Active Fuel Station is present 213m S of the site. Due to the distance and intervening hardstanding, it is unlikely a contaminated pathway exists, and this is therefore considered a low risk to human health.

4 GEOTECHNICAL RISK ASSESSMENT

4.1 Introduction

- 4.1.1 This risk assessment has been undertaken with due regard to the advice relating to ground instability as provided in the Department of the Environment (Welsh Offices) Planning Policy Guidance (no. 14) for "Development on Unstable Land". The guidance discusses the causes of Unstable Land and defines them as falling into one of three categories:
- The effects of underground cavities; these may be of natural origin or due to mining or to civil engineering works.
 - Unstable slopes; these may be natural, in both coastal and inland situations; or man-made, whether excavated, as in quarries or cuttings, or constructed, as in tips and embankments.
 - Ground compression; this may be of natural origin due to peat, alluvial, estuarine or marine soils; or due to human activities, e.g. made ground, landfill or restored opencast mines; and ground subject to movement due to shrinking and swelling clays.
- 4.1.2 While in all cases instability may arise whether or not there is any development on the surface, it is important to recognise that the development itself or the intensification of development may be the triggering factor, which initiates instability problems.
- 4.1.3 The risks posed by each type of unstable ground are discussed based upon the proposed redevelopment of the site for dwellings. Table 5 below outlines the key findings.

Table 4.1: Overview of the risks posed by unstable ground

Underground Cavities
The property is situated within a former mining area, the man-made cavity is 2m to the NW.
Unstable Slopes
The site is gently sloping; the risk from unstable slopes is low.
British Geological Survey Data
Information relating to potential ground instability issues at this site has been collected from the BGS digital and hard-copy mapping. Below is the summarised information.

Natural Hazard Findings	
Hazard	Risk Classification
Shrink – Swell Clays	Negligible - Ground conditions predominantly non-plastic. No special actions required to avoid problems due to shrink-swell clays. No special ground investigation required, and increased construction costs or increased financial risks are unlikely likely due to potential problems with shrink-swell clays.
Landslides	Very Low - Slope instability problems are unlikely to be present. No special actions required to avoid problems due to landslides. No special ground investigation required and increased construction costs or increased financial risks are unlikely due to potential problems with landslides.
Soluble Rocks	Negligible - Soluble rocks are present, but unlikely to cause problems except under exceptional conditions. No special actions required to avoid problems due to soluble rocks. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with soluble rocks.
Compressible Deposits	Negligible - No indicators for compressible deposits identified. No special actions required to avoid problems due to compressible deposits. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with compressible deposits.
Collapsible Deposits	Very Low - Deposits with potential to collapse when loaded and saturated are unlikely to be present. No special ground investigation required or increased construction costs or increased financial risk due to potential problems with collapsible deposits.
Running Sand	Negligible - No indicators for running sand identified. No special actions required to avoid problems due to running sand. No special ground investigation required, and increased construction costs or increased financial risks are unlikely due to potential problems with running sand.

4.2 Groundwater

- 4.2.1 It is unlikely that groundwater will be shallow in this area. It is anticipated that groundwater will flow to the north west.

5 CONCLUSIONS AND RECOMMENDATIONS

5.1 Anticipated Ground Conditions

- 5.1.1 The anticipated ground conditions are based on the geological information available at the time of writing this report, as well as an evaluation of existing structures on site and their potential associated Made Ground.
- 5.1.2 It is anticipated that the site is underlain by up to 0.50m of TOPSOIL across the site.
- 5.1.3 Any TOPSOIL, will be underlain by clayey sandy GRAVEL belonging to the Mylor Slate Formation.

5.2 Geotechnical Considerations

- 5.2.1 Any Made Ground encountered on site will not suffice as a suitable bearing, therefore shallow foundations should be placed in the underlying natural material.
- 5.2.2 Conventional strip foundations may be viable at this site; however a site investigation will be required to confirm this. It would also be considered prudent to carry out soakaway testing in accordance with BRE 365 to assess the sites suitability for conventional drainage.

5.3 Conclusions

- 5.3.1 Development is within an area where greater than 30% of properties are above the action level for Radon. However, due to the lack of residents and permanent dwellings in the proposed plans, the risks associated with this are significantly lowered.
- 5.3.2 Levels are naturally occurring arsenic are likely to exceed the relevant guideline value of 170mg/kg (for public park end uses).
- 5.3.3 The closest historic works were located 75m NE. Despite the subsequent development in the area and presence of hardstanding in this area, the abundance of historic works means, a contamination pathway may be present.
- 5.3.4 Due to the abundance of historical landfill sites, as well as the handling of special waste and liquid sludge, a contaminated pathway may be present.
- 5.3.5 The Category 3 (Minor Impact) pollution incident that occurred in 1999 presents a low risk to human health due to the isolated nature and low severity.
- 5.3.6 The abundance of Industrial Land Use in the area presents a moderate risk to human health as a contaminated pathway may be present
- 5.3.7 The presence of a Gas Storage Cylinder 2m North of the site in early maps presents a moderate risk to human health.
- 5.3.8 The usage of land immediately North of the site as a military facility is considered a moderate/low risk to human health, due to the decreasing activity in the facility in recent decades.

- 5.3.9 An Active Fuel Station is present 213m S of the site. Due to the distance and intervening hardstanding, it is unlikely a contaminated pathway exists, and this is therefore considered a low risk to human health.
- 5.3.10 It can be concluded that the site is likely to be suitable for the proposed development, once the recommendations contained within this report have been implemented.

5.4 Recommendations

- 5.4.1 It is recommended that a Phase II Site Investigation be implemented in order to identify, quantify, and delineate any potential areas of contamination on site. The Phase II Site Investigation should also include a geotechnical assessment of the site.
- 5.4.2 The Phase II Investigation will be aimed at identifying possible sources of contamination highlighted in the Preliminary Conceptual Model.
- 5.4.3 Full radon protective measures are required for any relevant proposed structures in-line with BRE guidelines.
- 5.4.4 In the event unexpected contamination is found during development, work should cease until the material can be identified and remediated appropriately.
- 5.4.5 All site workers should be equipped with the correct PPE and have undertaken suitable risk assessments, job safety and environmental analysis before work commences.
- 5.4.6 Waste material to be removed from site should be handled by a suitably licensed waste contractor.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Cornwall & Isles Of Scilly

Published 1888

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2022

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Cornwall & Isles Of Scilly

Published 1877 - 1878

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Cornwall & Isles Of Scilly

Published 1879 - 1880

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1975

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1994

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

|  transport |  dock |  Luftwaffe targets |
|  utilities |  Bombing decoy |  other |

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: (<https://zeticauxo.com/downloads-and-resources/risk-maps/>)

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

Action: See Recommendations

Dear Sirs,

Re: Park Gerry, Park Road, Camborne, Cornwall, TR14 8QB

We thank you for your recent request.

As instructed, we have carried out a mining search in respect of the above property, as delineated on the plan supplied for the purpose of requesting this search (a copy of which is included with this report).

The purpose of this mine search is to examine and interpret the plans and records in our possession relating to metalliferous mining activity and based upon this information, give a professional opinion in respect of potential risk to the property from such historical mining activity and, if required, make recommendations as may be deemed appropriate.

Where other workings relating to clay, stone or other minerals are noted to be in close proximity to the property mention will be made of them.

It is of a format suitable for conveyancing purposes.

Mining Activity

The property, which is shown edged in green on the attached plan is located within the once important Camborne-Redruth mining district, which has witnessed considerable activity for the mining of copper and tin ores from the early 17th century up to the present day.

The northern section of the property is underlain by deep workings associated with the former South Roskear Mine, as these would not directly affect the ground surface they have been omitted from the plan for clarity.

The shallowest significant recorded mine tunnel is an adit (drainage tunnel) shown in blue, which would lie at sufficient depth to not cause a direct risk to the property.

Based upon the orientation of the recorded workings, the suspected surface outcrop of the South Roskear Lode lies just to the north of the property within the zone coloured orange.

A second lode at an unspecified horizon is indicated to extend across the property as indicated, we can find no records of any workings on this lode in our archive.

Recorded old mine shafts lie close to the northern boundary of the property as represented by red circles.

During development work on a property adjacent the southern corner of the property, a previously unrecorded shallow tunnel was encountered, as shown in red.

This feature was observed to extend in a west-north-westerly direction into the property.

We have found no evidence of clay workings or other mineral workings in the immediate vicinity of the property.

Action: See Recommendations

Based upon the historic mapping sources we have reviewed we have found no evidence for the presence of any water supply wells within the boundaries of the property.

Conclusions

The property lies within the lease area of the South Crofty Mine, which is being evaluated / prepared for possible re-opening.

In the event that active mining resumes in the future, any such workings would be carried out subject to strict regulation and at considerable depth below ground to not have any adverse effect upon the surface.

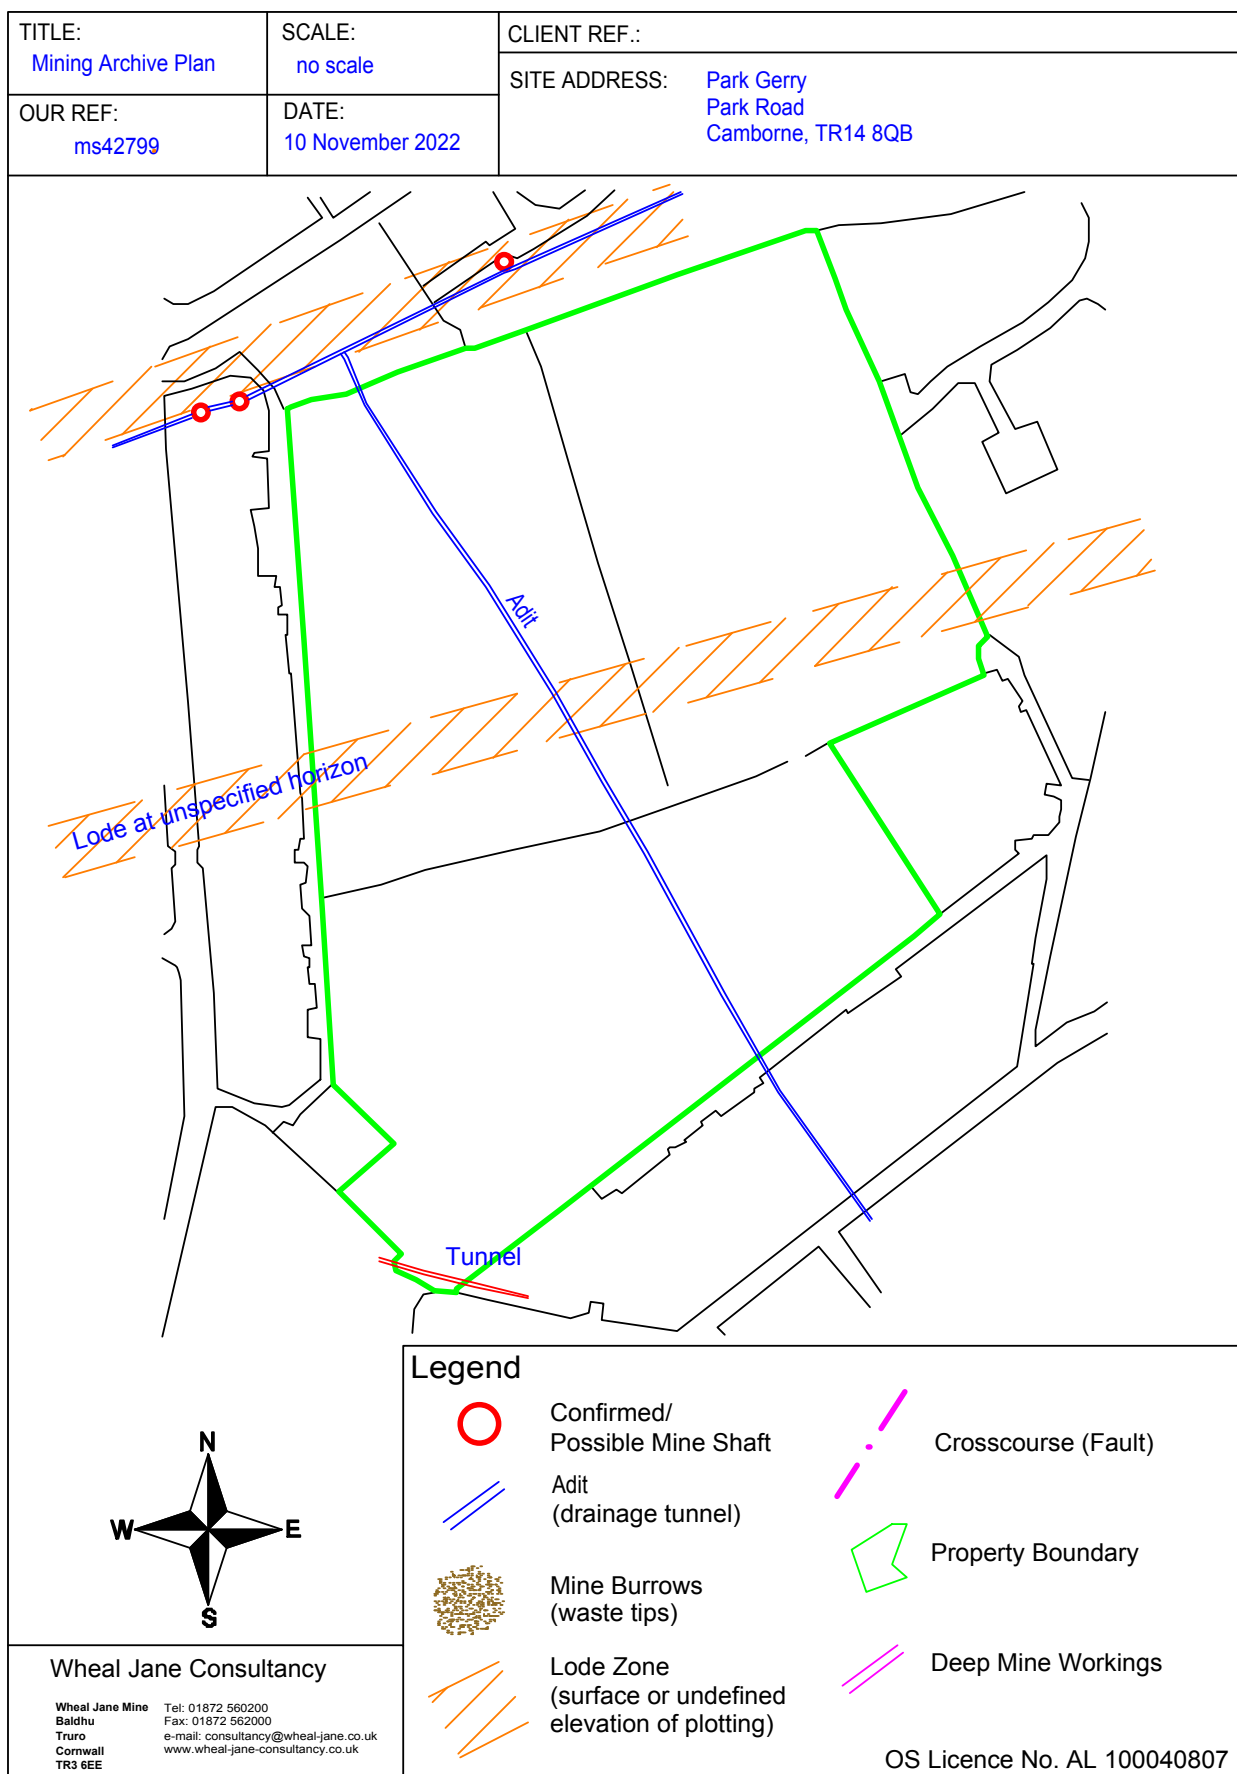

Whilst the plans and records that are currently held in our possession at the time of compiling this report, relating to this district, do not indicate the presence of significant shallow or surface metal mine workings or shafts within the boundaries of the property, given the identified features mentioned above, we are unable to give an assurance that the property will not be adversely affected by mining activity.

Recommendations

We would consider the following to be appropriate:

- In respect of the recently discovered shallow tunnel at the southern margin on the property we would consider that this area should be investigated to assess the depth and extent of this feature.
- If any new building development is planned on this property in the future a site investigation to check for any unrecorded or otherwise unrecorded mine workings will be required.
- Taking into account that much of the development appears to be leisure facilities, we would recommend that a detailed walkover of the site is undertaken to check for any visual evidence of localised, abnormal ground settlement or subsidence should be undertaken.
- Any such areas identified should be subject to physical investigation to assess the cause.
- If, during the course of any site works, any infilled or otherwise abnormal ground conditions are encountered, investigation to examine the extent and nature of such would be required.

Action: See Recommendations

Action: See Recommendations

Scope of Search & Limitations

This search has been carried out with reference to the extensive collection of plans, records and archives that are held in our possession at the time of writing this report and from this material we have endeavoured to give as accurate a report as possible in respect of the property as delineated in the initial request.

However, taking into account that such records may not be wholly complete or accurate, that records may exist of which we do not hold copies, or records exist that are held in private sources which are not available to us and that in Cornwall, Devon and Somerset many ancient shallow workings and shafts exist of which there are no records, we cannot accept liability for any inaccuracies there may be.

This report is concerned solely with the property searched and should not be used in connection with adjacent properties as only relevant mining features have been mentioned and any known features that would not have a direct influence upon the target property may have been omitted for clarity.

The report is based upon the property boundaries as shown on the supplied request plan.

We cannot accept liability for any inaccuracies if the property boundaries, as supplied to us by the client or the client's agent, are subsequently shown to be incorrect, incomplete or if no such request plan has been supplied when the search has been requested.

This report is confidential to the client and the client's legal advisor and the client's mortgage lender and as such may be used by them for conveyancing or related purposes.

We have no liability toward any person or organisation not party to commissioning this report.

This report or any part of it, is not permitted to be reproduced, copied, altered or in any other way distributed by any other person or organisation.

Unless otherwise expressly stated, nothing in this report shall create or confer any rights or other benefits pursuant to the Contracts (Rights of Third Parties) Act 1999 in favour of any person or organisation other than the person/organisation commissioning this report.

This report is not a contaminated land, environmental, geotechnical or archaeological survey and should not be interpreted as such.

No site visit has been made.

We trust that this report is to your satisfaction and will be happy to answer any queries with respect to it.

Yours faithfully,

Wheal Jane Consultancy

Action: See Recommendations

Mining Glossary

Adit	Horizontal mine drainage tunnel driven from low ground into mine workings. The adit tunnel is the shallowest level shown on mine plans and usually represents the earliest period of workings recorded. Adits have ventilation shafts at regular intervals, which are mostly unrecorded.
Alluvium	Clay, sand and debris deposited by a river. Often streamed for tin.
Burrow	A mine waste tip.
Caunter lode	A lode which runs in a different direction to the general trend of lodes in the district.
Coffin/Koffen	Trench-like openwork at surface.
Costean Pit	A small surface pit excavated to locate and/or sample a lode.
Crosscourse	Geological features which run at right-angles to the principal lodes of a district, and are vertical or sub-vertical faults. Mostly barren of payable minerals, but can carry values of iron ore, cobalt and other metallic minerals. Also known as 'guides' or 'trawns' in the St Just and St Ives mining districts respectively.
Crosscut	Tunnel driven underground, usually at right-angles to the lodes.
Dip of Lode	Angle of inclination of a lode from the horizontal.
Drive	Tunnel driven along the course of a lode.
Elvan	Igneous rock (quartz-porphry) occurring as a vein or dyke. Can be extremely hard. Exploited by quarrying.
Granite	Igneous rock. Crystalline mixture of quartz, feldspar and mica.
Greenstone	Igneous rock also called 'blue elvan'. Generally extremely hard.
Gunnis	Open stope at surface or underground.
Kaolinisation	Alterations or weathering of granite to clay and sand from solid rock.
Killas	Generic term given to sedimentary rock in Cornwall.
Leat	A man-made watercourse.
Level	Horizon underground where ore movement and communications are maintained. Levels consist of lode drives and crosscut tunnels: i.e. 12 fathom level; the system of tunnels driven at 12 fathoms below adit horizon.
Lode	A mineralised structure or vein. Most lodes run from surface vertically or sub-vertically, and can vary from a few inches to several metres in width.
Mundic	Iron pyrite, arsenic and sulphur - arsenopyrite.
Openwork	A surface working, which has usually left a pit or backfilled excavation.
Outcrop	The part of the lode which breaks surface. Worked-out voids and backfilled areas are outcrop features.
Rab	Weathered zone of mixed rock and soil (natural profile)
Sett	An area of land leased for mining.
Shaft	Holes in the ground, which can vary from 0.5m x 1m up to shafts 7m across. Engine shafts tends to be large (typically 3m x 2m) and adit shafts are smaller (typically 1.2m x 1.8m). Depths vary down to 700m.
Stockwork	Mass of narrow veins or lodes running parallel and sub-parallel.
Stope	Ground where lode has been removed leaving void. Sometimes open to surface.
Tailings	Residual sands and slimes from ore dressing. Usually heavily contaminated.

Please note that request plans do not automatically follow the convention for north to be oriented 'up' the page, however, all directional references made in this report are based upon correctly oriented mapping resources that are held by Wheal Jane Consultancy.

Accuracy, quick turnaround times, competitive prices, fully qualified and experienced staff, full professional indemnity insurance cover.

Cornwall's first ISO certified mine search and site investigation specialists

The Phased Approach to Land Contamination

As set out in Contaminated Land Report 11 - Model Procedures for the Management of Land Contamination, Environment Agency Guidelines
