Statement of Requirements

Ambient Noise Upgrade to Royal Navy's Slocum G2 Glider - Statement of Requirement Background

1. Project HECLA is part of the Future Military Data Gathering (MDG) Programme (FMDG) and sits within the Develop Directorate of Navy Command. The project aims to develop the concepts and key user requirements to support the transition to Maritime Autonomous Systems (MAS) for oceanographic and hydrographic surveying.
1. The intent is to upgrade one of the Royal Navy's Slocum G2 Gliders to carry a fully integrated Ambient Noise collect systems to develop experience in the collection and processing of ambient acoustic data.

Constraints

1. The new module must have minimal impact on the Glider under water dived performance.
1. The sensor must be low powered and either draw power from its own source or from the gliders rechargeable power source. In either case whether charging the sensor, programming or data extractions must be achieved without compromising the water tight integrity of the glider.
1. Lightweight, compact, and rugged for ease of transportation and for launch and recovery without the need of any lifting equipment.

Operational output

1. The glider ambient noise system will also inform Proj HECLA, the Future Military Data Gathering Programme, wider Underwater Battlespace Autonomous system development.

Requirement

8. This describes succinctly the requirement that needs to be satisfied and is to be expressed in output-based terms.

Ambient System	Noise
Portability	The new sensor must be provided with a suitable rugged container (s) for the Glider and any removable ambient noise sensing components.
Transportation	Safe transportation by a small van.
Power	To demonstrate minimal power consumption.
Hull form	Must minimise impact of glider's existing hull form
Usability	Simple sensor configuration and data analysis to allow personnel to exploit systems without a dependency on OEM support. Sensor must be readily swappable between the 3 Slocum G2 gliders owned by the Royal Navy.
Performance	Capable of collecting ambient noise data to a depth up to 1000m and not affect other sensors within the glider. Frequency range above 30kHz.
Endurance	Must be able to log and store data for at least 3 months. Low power requirement. Either have its own rechargeable power source, rechargeable without opening the gliders body or drawing power from the gliders rechargeable Lithium power source.

Operating envelope	
Areas	Capable of operating in saltwater in coastal and open water environments from small low freeboard unspecialised boats or ships.
Depth	Up to 1000m depth rating.
Sensors, Data and Comms	
Vehicle Navigation Systems	Must utilise GNSS, and other relevant navigation data from the host platform or have an embedded source.
Data Analysis	Sensor analysis software to be included. To be confirmed by the supplier, but open and standard formats required.
Data formats	Documented formats for all logged vehicle and sensor data. To be confirmed by the supplier, but open and standard formats required.
Command and Control (C2)	Wi-Fi Modem between vehicle and control point with 'Return to Home' function to aid swift recovery of the AUV to the operator's actual position.
Data Storage and Delivery	All data to be stored internally. Selectable processed/subset data is also to be available for transmission over the glider's iridium system. Furthermore, data is also to be readily accessible, without risk of damage to AUV in open air maritime environment. Rugged data processing IT is to be provided.
Training	
Delivery of Training	System is to be supplied with comprehensive operating manuals for the sensor's configuration and product generation. All training shall be delivered remotely with hardcopy training course note supplied on delivery.
Support & Maintenance	
Support Package for the Maintenance of the System	Supplier is to support the installation of the ambient noise sensor on to RN gliders. Including swapping between RN glider platforms. Furthermore, telephone support for the troubleshooting and basic maintenance of the sensors.
Ongoing Maintenance	Periodic sensor servicing / maintenance
Warranty	2 year of Warranty
Safety	
Safety information	Safety related information is to be provided with the system to enable safe operations within design specification
Delivery	
Hardware	Should be delivered to UK location by 31 Mar 22
Software	Should be delivered to Proj HECLA by 31 Mar 22
Training	Local training for 5 personnel.

Timeline

9. Delivery of the equipment should be complete by 31/03/2022 or as soon as is practicable after said date.

Delivery Information

10. The equipment is to be delivered to the following address:

Project HECLA
 HM Equipment Store
 Shackleton Building (MO56)
 Morrice Yard
 HM Naval Base Devonport

PL2 2BG

Security Considerations.

11. Data collected by the sensor system should not be accessible remotely by the supplier or any third-party organisations without prior approval of the MOD.

12. All information related or generated by the sensor is to be treated in the appropriate manner in accordance with Government Security Classifications. The classification of the material to be handled shall not exceed OFFICIAL in nature.

13. A Security Assurance Coordinator (SAC) is to be included in the supplier design team and the solution is to be registered on the Defence Assurance Risk Tool (DART). Data at rest and in transit must be protected according to its classification and a Risk Management and Accreditation Document Set (RMADS) is to be produced by the SAC.
