Section 1: Requirement

Introduction and summary of requirements

As set out in the scope of work described in Annex C, the UK is strengthening its Inventory Improvement Programme to take a strategic approach to continued Inventory development. The UK wishes to ensure estimates of emissions are as robust and accurate as possible as the UK moves towards Net-Zero Greenhouse Gas Emissions. To help strengthen the improvement program, the Department for Energy Security and Net Zero, which manages the Inventory for the UK, will commission rapid review of the Waste Inventory Sector to identify areas for improvement and inform prioritisation of these improvements.

Background

To date, the UK Greenhouse Gas Inventory (GHGI) has been shaped by an improvement programme which identifies methodological and data improvements to the quantification of emissions. Currently, improvements are:

- proposed annually by contractors (i.e., the Inventory Agency) responsible for compiling the Inventory, with a priority (low/medium/high) rating assigned to each improvement item based on time series consistency, uncertainty analysis and their relationship to policy.
- recommended by expert review teams that undertake routine review of the GHGI for the UNFCCC. However, these reviews tend to focus on immediate issues where the Inventory may not align with IPCC [Guidelines](#) rather than long-term issues within the Inventory system.
- put forward by stakeholders of the National Inventory Steering Committee (NISC) that governs the GHGI. The NISC comprises Inventory contractors, science-policy stakeholders from government departments and the Devolved Administrations, and other users of the Inventory outputs.

The coming five years will be critical to futureproofing the UK GHGI, to allow it to remain an effective tool for estimating GHG emissions and to withstand increasing demands as the UK government and its Devolved Administrations work to achieve Carbon Budgets and our 2050 Net Zero target. The UK will need a state-of-the-art Inventory that keeps pace with the changing emissions landscape and incorporates the best scientific, technological, and digital knowledge.

Aims and Objectives

The aim of this review is to provide information to support the UK Government to make more informed decisions in order to ensure the UK's Inventory is more accurate and transparent, now and into the future. This will be done by implementing the following objectives.

- Review the scientific and technical methods used to calculate different categories of the emissions in the Waste Sector (including interaction with other sectors) ensuring that they are applied correctly while ensuring that consistency in time series is achieved (see "Principles" below).
- Review activity data that are used to derive emissions estimates and advise whether they are sufficient and fit for purpose, in terms of completeness, consistency, transparency and accuracy, and if not, make recommendations on what other data are needed to achieve completeness, consistency, transparency and accuracy both now and in the future with emphasis on future-proofing the Inventory.
- Review how the UK Activity Data is collected (mostly from National Agency) and how inventory models are currently built and propose improvement where needed based on lessons learnt elsewhere. Please note that review of the digital structure of the inventory – i.e., how the methodologies are numerically implemented through software or code – is not core to this project, but any insights gained from experience of where other inventories systems have implemented calculations in an efficient and transparent way are very welcome.
- Assess whether the derivation of uncertainty estimates in each sector comply with internationally adopted methods and carefully consider how correlation between the

categories are handled. Reviewers should consider if the uncertainties could be presented in a more accessible or user-friendly way.

- Identify how current limitations in the UK GHG inventory will affect future domestic and international GHGI reporting if ignored.
- With a view to estimating emissions accurately over at least the next 10 years, identify areas where improvements to methodologies, emissions factors and/or activity data would have the biggest impact on making emissions estimates as accurate and transparent as possible, with emissions uncertainties quantified as well as is possible.
- Make recommendations to DESNZ as to a priority list of improvements to make, and ways in which these improvements can be made.

In implementing these objectives, you will draw on your experience, and on international best practice in the estimation of GHG emissions, including emerging methodologies which may not yet be widely adopted by other countries or covered by IPCC guidelines.

Methodology and Working Arrangements

You will use your expertise in Inventory science to consider all key methods, activity data and emissions factors used in the Inventory, and – drawing on the Inventory science in your own and other Annex 1 Parties, as well as materials produced by the Intergovernmental Panel on Climate Change Task Force on National Greenhouse Gas Inventories (IPCC TFI) and other emissions experts, you will propose approaches to strengthen the accuracy and transparency of the UK Inventory. This review should go much further than just assessing compliance with the guidelines, as is the scope of a UNFCCC review. Instead, this review should also aim to identify wider options to improve the Inventory and national system and recommend proactive steps the UK could take to ensure the Inventory can meet the UK's needs for the next 10-15 years.

Three expert reviewers will work together on the waste sector to identify the best ways to improve the UK GHG Inventory in line with the scope outlined. A chair will be agreed in advance to coordinate the review process of each sector and to make sure there is no duplication of effort between reviewers. Prior to commencing work, agreement will be reached on areas to focus on by each expert.

A Chair Expert Reviewer will be reviewing the recommendations of the review team and provide further recommendations on how best to go about implementation of recommended improvement possibly to align them with the IPCC guidelines.

Ricardo Energy & Environment – the UK Inventory Agency – will be accessible to the expert reviewers throughout the contract to answer questions including details about the Inventory architecture and provide background information and materials as appropriate. The availability of Ricardo experts will be shared with the expert reviewers and DESNZ ahead of time. Where possible requests for information will mainly be resolved by emails. Questions outside Ricardo's area of expertise will be forwarded to other members of the consortium in a timely fashion so that queries can be resolved as soon as possible.

Ricardo will also provide an overview of the Inventory architecture before work starts to give expert reviewers a basic knowledge of the UK Inventory and how the UK Inventory is compiled.

DESNZ will supply the reviewers with the following documents at the start of the project.

- Latest UK National Inventory Report
- Latest UK Emissions Projections (EEP 2022 / EEP 2023)
- UK Net-Zero Strategy Document (2021)
- UK Hydrogen Strategy Document (2021)
- UK Biomass Policy Statement (2021)

Questions about data, methodology, models etc, that are not covered by this documentation should be posed to the Inventory Agency, as previously agreed by DESNZ, as soon as they arise.

Regular catch ups should be held between reviewers to share learning and developments and to ensure that they are not spending too much time on the same issues.

Where sub-sectors are being reviewed in parallel, we encourage that cross-cutting issues that arise during the review process should be addressed through communication between different reviewers.

There will be project catch up meetings between DESNZ, Defra, Environment Agency, Devolved Administration, the expert reviewers, and Ricardo, where progress and issues are discussed. These meetings should focus information not yet clear to the review team, on providing solutions to challenges and how those solutions can be implemented in the Inventory.

The full in-depth review (rapid review) project will be guided by a non-disclosure agreement between all parties as this project should not be discussed elsewhere, however, you may use lesson learned from this project in your day-to-day activities without direct reference to the UK Inventory.

Outputs Required

1. A written report, agreed by all reviewers, and finalised by the Chair Reviewer, considering comments from the UK Inventory Agency (Ricardo Energy & Environment, and its sub-contractors) that sets out findings of the report and recommendations for improvement – see **Annex 3** for the full scope of work to be undertaken to deliver this report, and **Annex 4** for a detailed report template. The report will cover.
 - Findings of review into the scientific and technical methods used to establish emissions estimates.
 - Review of activity data.
 - Review of models.
 - Assessment of the robustness of uncertainty estimates.
 - Assessment of the current limitations of the Inventory with regard to full and accurate estimates of future UK GHG emissions
 - Jointly agreed recommendations on improvements which could be made to future-proof the inventory
 - Advice on the best way to implement these improvements
 - Proposed solutions to future Inventory challenges caused by changing emissions landscape.
2. A 3-hour workshop – by MS Teams – with UK Inventory experts and potentially experts from other countries to discuss these findings.

The Chair Reviewer will be responsible for ensuring the quality of the final report, both in terms of the robustness of the scientific findings, and the clarity and accuracy of all written, graphical, and numerical information provided. Following final Quality Assurance by DESNZ – and subject to Ministerial approval - the final report will be made publicly available on [.gov.uk](https://www.gov.uk)

Ownership and Publication

All outputs from the research project will be assumed to be owned by DESNZ. The outputs, raw data and analyses carried out in the research will be transferred to DESNZ at times agreed with DESNZ and can only be used for further uses with the express permission of DESNZ only. The Contractor will be required to seek approval in advance from the Authority Project Officer(s) of any press release, presentation or publication related to this project until the final report is published. The Contractor shall allow sufficient time for this approval.

Project outputs should be accessible, and suitable for publication.

Quality Assurance

The expert reviewers should work together to Quality Assure all analysis, and recommendations. The Chair Reviewer will have final responsibility for the quality of the outputs.

- You have experience of undertaking GHG Inventory related activities.
- You have conducted reviews for Annex 1 Parties recently (2015-2022) or be able to demonstrate equivalent experience in inventory preparation.
- You have demonstrated capability to deliver the scope of activities defined below in **Annex 3**.

Section 3: Declarations

Potential Supplier Information and Exclusion Grounds

The standard Selection Questionnaire is a self-declaration, made by you (the potential supplier), that you do not meet any of the grounds for exclusion³. If there are grounds for exclusion, there is an opportunity to explain the background and any measures you have taken to rectify the situation (we call this self-cleaning).

A completed declaration of Part 1 and Part 2 provides a formal statement that the organisation making the declaration has not breached any of the exclusions grounds. Consequently, we require all the organisations that you will rely on to meet the selection criteria to provide a completed Part 1 and Part 2. For example these could be parent companies, affiliates, associates, or essential sub-contractors, if they are relied upon to meet the selection criteria. This means that where you are joining in a group of organisations, including joint ventures and partnerships, each organisation in that group must complete one of these self-declarations. Sub-contractors that you rely on to meet the selection criteria must also complete a self-declaration (although sub-contractors that are not relied upon do not need to complete the self-declaration).

When completed, this form is to be sent back to the contact point given in the procurement documents along with the selection information requested in the procurement documentation.

Consequences of misrepresentation

If you seriously misrepresent any factual information in filling in the Selection Questionnaire, and so induce an authority to enter into a contract, there may be significant consequences. You may be excluded from the procurement procedure, and from bidding for other contracts for three years. If a contract has been entered into you may be sued for damages and the contract may be rescinded. If fraud, or fraudulent intent, can be proved, you or your responsible officers may be prosecuted and convicted of the offence of fraud by false representation, and you must be excluded from further procurements for five years. Notes for completion

1. The “authority” means the contracting authority, or anyone acting on behalf of the contracting authority, that is seeking to invite suitable candidates to participate in this procurement process.
2. “You” / “Your” refers to the potential supplier completing this standard Selection Questionnaire i.e. the legal entity responsible for the information provided. The term “potential supplier” is intended to cover any economic operator as defined by the Public Contracts Regulations 2015 (referred to as the “regulations”) and could be a registered company; the lead contact for a group of economic operators; charitable organisation; Voluntary Community and Social Enterprise (VCSE); Special Purpose Vehicle; or other form of entity.
3. Please ensure that all questions are completed in full, and in the format requested. If the question does not apply to you, please state ‘N/A’. Should you need to provide additional information in response to the questions, please submit a clearly identified annex.
4. The authority recognises that arrangements set out in section 1.2 of the standard Selection Questionnaire, in relation to a group of economic operators (for example, a consortium) and/or use of sub-contractors, may be subject to change and will, therefore, not be finalised until a later date. The lead contact should notify the authority immediately of any change in the proposed arrangements and ensure a completed Part 1 and Part 2 is submitted for any new organisation relied on to meet the selection criteria. The authority will make a revised assessment of the submission based on the updated information.
5. Every organisation that is being relied on to meet the selection must complete and submit the self-declaration.

The authority confirms that it will keep confidential and will not disclose to any third parties any information obtained from a named customer contact, other than to the Cabinet Office and/or contracting authorities defined by the regulations, or pursuant to an order of the court or demand made by any competent authority or body where the authority is under a legal or regulatory obligation to make such a disclosure.
