About Hello Lamp Post

Hello Lamp Post is a communications and engagement platform that connects people to their town or city. Driven by AI, citizens are invited to interact with objects that they use every day and the things that make up the world around them (lamp posts, bus stops, benches, hoardings, statues and parking metres), using their mobile phone. By encouraging people to slow down, reflect and anonymously engage with their local area, Hello Lamp Post's technology in return makes local information more accessible and gathers citizen insights and sentiment on community initiatives - empowering people to influence the future development of their local area.

By making the planning of cities more centred around the needs and ideas of our citizens, Hello Lamp Post is helping to drive the way we shape local areas and services, bettering local democracy and positively impacting places where people live, work and visit - in the vision of those who use the area most.

What problem/ challenge is Hello Lamp Post solving?

In today's urban world, cities are developing and evolving at a rapid rate and it is believed that by 2050 more than 68% of the world's population will live in cities. Every city in the world has a duty to include citizens in urban decision making. However, as urbanisation increases, the voices of citizens are often unheard or neglected and decision makers face the increasing challenge of properly understanding their wide and varied audiences. In addition to this, current tools for public communication are outdated and analogue leading to slow, expensive and often non-compliant public engagement.

The idea of Hello Lamp Post started from a need to solve these challenges - by inviting residents to interact with familiar objects, we would be able to provide cities with the support they needed, to effectively and efficiently engage with their citizens - acting as an extension to their team. What we discovered was that by encouraging people to anonymously interact with our digital platform, we were able to increase participation and engagement by 40%, in comparison to traditional methods of communication. As well as gather insights, that had been previously inaccessible.
