Schedule 1: Services

Approach Overview

BCN would like to propose that we will take the following approach to delivering the Authority's specified requirements:

- To ensure that Marvin is maintained, developed, and supported, BCN will assign a dedicated team of experienced developers, testers, and support staff who will work closely with the Authority's stakeholders and end-users. We will follow the best practices of agile software development, in an effort to strive for continuous improvement. We will also look to utilise automated tools and processes where possible to monitor, test, and deploy Marvin & SIAF, ensuring its reliability, security, and performance.
- Arun Ponnusamy will be allocated as the lead engineer with technical project support from Adam Hyland on this project. This will ensure that there are dedicated resources on hand to develop a deep understanding of both the challenges faced by the Authority and the vision for the future, allowing them to provide the best technical guidance on facing those challenges and reaching that future. BCN will surround Arun and Adam with colleagues whose experience and expertise can be drawn on when required but also to provide resilience where needed and allow them to be a specialist point of contact but not a bottle neck to efficient development.
- To fix bugs and system errors within prescribed timescales, BCN will look to ensure that our dedicated team of developers are always up to date with the latest changes ensuring that they can hit the ground running. BCN will also look to provide regular reports and updates to the NHS England on the status and resolution of incidents, as well as the root causes and preventive measures. BCN uses an integrated ticketing support system with configured escalations to ensure that reported issues are put in front of the right person at the right time and allow us to respond to them promptly. The system also provides a history of issues raised and their resolutions which can be used to fix issues faster and bring other members of the organisation up to speed on your solution and increase our response time.
- To deliver the incident recording system as specified and within prescribed timescales, we will follow a structured project management methodology that will cover the entire project lifecycle, from initiation to closure. We will define the project scope, objectives, deliverables, milestones, and risks, and agree on them with the NHS England. We will also establish a project governance structure that will ensure effective communication, collaboration, and decision-making among all project stakeholders. We will also use a quality assurance framework that will ensure that the incident recording system meets the Authority's functional and non-functional requirements, as well as the relevant standards and regulations.
- BCN use Azure DevOps to manage all code developed in a project and utilise its integrated pipelines to deploy solutions. This enables us to track changes, roll back a solution to a previous version where required, and can implement stage gates to manage and approve deployments. The system also serves as a central store for all code and developed material which is secure but sharable with appropriate stakeholders where needed. With the systems used by BCN to develop, refine and manage solutions we can give assurances of compliance with best practice, data governance and security.
- To facilitate knowledge transfer during contract delivery and exit management at the conclusion of the contract, we will adopt a comprehensive and systematic approach that will include the following elements:

Documentation: We will produce and maintain clear and accurate documentation of Marvin and the incident recording system, covering their design, architecture, code, configuration, testing, deployment, operation, and maintenance. We will also document the business processes, workflows, and user guides related to the systems. We will share and update the documentation with NHS England throughout the contract period, and hand over the final versions at the end of the contract.

Training: We will provide training sessions and workshops to NHS England users on how to use, manage, and support Marvin and the incident recording system. We will also provide training materials, such as manuals, and online courses via our partners on how to maximise usage of Microsoft 365 ensuring that all tools available are being utilised to their fullest. We will tailor the training content and delivery methods to suit the different needs and preferences of the trainees such as end user training, power user training and administrator training. We will also evaluate the effectiveness of the training and provide feedback and support to the trainees.

Transition: BCN will work with NHS England to plan and execute a smooth and seamless transition of Marvin and the incident recording system to the NHS England or a new supplier at the end of the contract. We will ensure that all the necessary data, assets, and resources are transferred and verified, and that all the contractual obligations and liabilities are fulfilled and settled. We will also provide post-transition support and assistance to the Authority or the new supplier for a specified period, to ensure that any issues or queries are resolved and that the systems are functioning properly.

Team & Implementation

Risk Management

SharePoint 2013 End of Life:

- **Risk:** The current Marvin system is built on SharePoint 2013, which has reached its end of life. This poses security vulnerabilities and lack of support.
- **Mitigation Approach:** We will create a detailed migration plan to move Marvin to a supported platform. This involves upgrading to a newer version of SharePoint or migrating to SharePoint Online. We will assess the existing customizations and third-party solutions to ensure compatibility during the migration process. Additionally, we'll engage with Microsoft's extended support services if needed.

Windows Server 2012 & SQL Server 2012 End of Life:

- **Risk:** The underlying Windows Server and SQL Server 2012 supporting SharePoint 2013 and Marvin is also at its end of life. This may lead to security risks and operational challenges.
- **Mitigation Approach:** As SharePoint 2013 is not supported on any other platform (although it can be configured to work on Windows Server 2016 [although this is not officially supported by Microsoft]) the path of least resistance will be to migrate the existing SharePoint 2013 environment to the Microsoft 365, either N365 or the NHS England's own tenant.

Classic SharePoint Platform and M365 Compatibility:

- **Risk:** Marvin's development using classic SharePoint technologies (C# / .NET) makes it incompatible with SharePoint Online. Therefore, a direct migration of the application is not possible.
- **Mitigation Approach:**
 - **Assessment:** We will conduct a thorough analysis of Marvin's existing features, customisations, and dependencies. This includes identifying deprecated components and assessing their impact.
 - **Redevelopment:** We propose redeveloping Marvin using the SharePoint Framework (SPFx) or Power Platform (Power Apps, Power Automate). This allows seamless integration with SharePoint Online and M365 services.
 - **Incremental Migration:** We'll break down the redevelopment into manageable phases. Each phase will address specific functionalities, ensuring continuity for users.
 - **User Training:** As part of knowledge transfer, we'll train users on the new platform, emphasizing the benefits of modern tools and collaboration features.
 - **Data Migration:** We'll migrate existing data from the classic system to the new platform, ensuring data consistency and integrity where possible using out of the box tools.
 - **Testing and Validation:** Rigorous testing will validate the redeveloped Marvin against functional requirements, security standards, and user expectations.
 - **Change Management:** We'll communicate the transition plan, manage user expectations, and provide ongoing support during the migration.

In conclusion, our approach focuses on a systematic transition, risk mitigation, and collaboration with the Authority. We'll ensure that Marvin remains secure, compliant, and aligned with the latest technologies throughout the contract lifecycle. At contract conclusion, we'll facilitate a smooth exit, including knowledge transfer and handover to NHS England.

Social Value

In our approach to delivering the contract, we are committed to minimising waste and promoting sustainability. Here's how we plan to influence staff and suppliers to fight climate change:

- **ESG & carbon offsetting**
 - ESG represents the company's efforts to systematically assess, manage, and monitor risks of material potential impact to the strategic and financial decisions of the company. Many companies report on ESG, which may create value and look positive. However, BCN are keen to ensure that our ESG strategy provides real value, with a focus on "Being Good", not "Looking good".
 - BCN is committed to environmental sustainability and social responsibility through various initiatives. Our active work towards a more balanced, diverse workforce, encouraging volunteerism, and support for charitable causes demonstrate our commitment to be part of a more sustainable and responsible world.
 - Environment, Recycling & Sustainability
 - Equipment recycling
 - Charity Volunteer Days
 - Changing the gender bias: More women in tech
- **Environment, Recycling & Sustainability**
 - BCN are striving to achieve a greener more sustainable world through:
 - Sustainability within our supply chain
 - Energy saving across all our sites
 - EV and Cycle schemes available to all our team
 - Fostering environmental awareness and responsibility of all employees
 - Waste recycling
 - Use recyclable cleaning products at our offices
 - Our Green Ambassador raises awareness and encourages energy saving and recycling, as well as making changes to process and suppliers
