1

Estimate

Provide us with measurements or use our online calculator and our team will put an estimate together for you within 24 hours. If you send an e-mail with photos of the area and what you are looking for that really helps the team get an idea of project.

2

Confirmation

Once you are ready to proceed, we will send a layout drawing with specifications to ensure we have understood your project correctly.

3

Technical Survey

Once the layout and specifications are confirmed and the technical survey fee has been received, we will book for our professional surveyor to come to your site and take accurate measurements of the area.

4

Drawing

When the survey is completed, and we have complied the data from your survey we will provide a final drawing and quotation for your approval.

5

Installation

As soon as everything has been confirmed and we have received the 50% deposit our expert installers return to install as soon as our current lead times allow.

Ready to make it so?

To confirm this estimate and book your site survey, visit our client portal or call us on 0203 375 1592.

[Read our FAQs →](#)

What is the maximum height the glass and door can be?

We typically install up to a height of 3000mm, any higher and the integrity of the glass is significantly reduced.

How wide is a panel of glass?

We typically install panels between 650mm and 850mm, in the technical survey we will ensure each panel of the partition looks the same width.

I want to proceed, what are the next steps?

Give us a call or send us an e-mail and we can get the ball rolling. Once you have given us the go ahead, we will send you an e-mail including a checklist and a link for the Technical Survey Fee.

Will you manufacture off my measurements?

No, our professional surveyor will always visit the site to take accurate measurements with a laser. After surveying, we will send a drawing with the layout design and measurements for your approval before manufacturing.

What happens if there is data trunking or pipework?

Not a problem, we have a number of solutions for obstructions including 'notching' the glass, cutting the track work around and the use of packing pieces.

Can you install into a suspended ceiling?

Yes, the majority of our installation are into suspended ceilings.

What colour is the perimeter track?

We can do any colour RAL, however our standard and therefore quickest lead time RAL colours are: RAL 9005 (Black), RAL 9006 (Silver), RAL 9010 (White) and RAL 7016 (Anthracite).

What is the lead time?

Our typical lead time is 2-4 weeks, though some specialised materials can take up to 8 weeks.

Will the glass be fire rated?

Our standard glass partitioning is non fire rated, however, we do offer fire rated products ranging from E30 to EI60. Fire glass requires sign off from building control on the exact rating needed.

Will the glass be soundproof?

Installing a glass wall or partition will always reduce noise transfer between rooms. However, we offer various types of glass with different acoustic properties. Clients should note that sound can also travel through suspended ceilings and bounce off hard surfaces.

I have an uneven ceiling, can I still install a glass partition?

Yes, absolutely! The surface area of the uneven sections will determine the most cost-effective option. For old buildings with uneven ceilings, we typically measure each glass panel individually to account for height discrepancies. Alternatively, we can install a deeper perimeter channel to absorb the ceiling's undulations.

Why Choose Us?

We are a family run business founded originally in 1993. Glass Partitioning UK was originally set up in the Gloucestershire region but over the years we have expanded and our team now covers London, Reading, Slough, Brighton and everywhere in between.

Our head office is now in London and our work spans the length and breadth of Great Britain. Many of our clients are national and due to the quality of our work one job regularly leads to another and we find ourselves working in Edinburgh!
