Regulation Index

FAQ

Is there a page limit or word limit on the proposal?

No limit but please ensure you cover all relevant questions outlined in the tender.

Do you have a view on the number of countries to include in the index?

No agreed countries so we are keen to take views from interested bidders on what they think might be realistic and design in collaboration.

Any indication on the number of metrics for the index?

Same as above

Do you anticipate updating the index in future or is it a one-off exercise?

Yes, we hope to update over time.

Is there a desire to focus on types of regulation that have the most direct impact on innovation (e.g. environmental or consumer protection regulations which set barriers and limits on technologies) or is there an interest to also consider regulation with indirect impacts (e.g. labour market regulation allowing for skills availability, regulation that facilitates entrepreneurship/start-ups)?

We'd like to explore all options available for metrics both direct and indirect.

Is there are any specific cybersecurity accreditations that each tendering party must have in order to qualify for the tender process? Or are you simply seeking evidence of any cybersecurity accreditations each tenerdering party holds to verify security measures are in place?

KTN works with the recommendations from the National Cyber Security Centre and implements the 10 steps to cyber security through the adoption of the Cyber

Essentials (CE) scheme. To ensure security throughout the supply chain, we require that all providers meet the minimum of CE standards and hold CE certification. Please note that this is a minimum requirement, and ideally, CE+ or other International standards, i.e. ISO 27001 or SOC II should be demonstrated.
