Schedule 1 – Services

Supplier Proposal v4 *Printed and inserted at Schedule 1, or to be appended to the signed contract.*

[REDACTED]

The following notes clarify certain provisions and assumptions in the Suppliers Proposal and take precedence over the Suppliers Proposal.

- The use of the Tanium tooling is to cover any MOJ /HMPPS infrastructure identified in addition to known Quantum.
- The Supplier owns the tooling service and the related service wrap but is not required to own access to those devices outside their current MOJ/DXC contracts. .
- Where Tanium can identify additional assets without deployment of agents, this would provide useful additional information to the programme, and as the Buyer would be interpreting the data directly using the core Tanium functionality, it is not expected to incur any additional costs, risks or obligations on the Supplier.
- It is agreed that any non-MOJ/HMPPS devices are out of scope of the project.
- The Supplier is to have administrative level access to Tanium.
- The Buyer organisation shall have direct access to the data created by the Tanium tooling.
- The MOJ is to own the rights to use Tanium SaaS Subscription for the Tanium Core, Asset and Discover modules up to 10,000 licences only unless agreed and recorded as a change to this Call-Off Contract. MOJ to comply with the terms of the Tanium EULA.
- It is agreed that some areas of aged or low specification hardware may not be able to accommodate the Tanium agent process.
 - Given that Tanium would be required to identify those devices that have a risk of failure in loading investigative agents, the Buyer organisation will not be able to supply a database of at-risk devices.
 - Based on the negligible failure rate during the proof of concept, these should be identified where reasonably technically feasible using the resources identified in the SOW (e.g. by identifying devices that refuse the load) but any failure to load or operate the agents on these low-specification devices is seen as low impact / low probability, and is accepted as a technical risk and that this may not be achieved.
- Tanium is capable of finding unmanaged and rogue devices that are connected to the network but will not find every device and this Call Off Contract does not include any remediation activities such that the missing devices can be located.
- Tanium is capable of finding devices via a network scan but can only find limited information about these devices. This information can though be enhanced by using other Network discovery tools such as SCCM; Vulnerability Scanning; Network Access Control; Network Management. These would complement Tanium reports to provide fuller and complete pictures of network assets. All of these are not included as part of this Call-Off Contract.
- The Tanium Server will be hosted in the Buyer's data centre. The Buyer will stand up the server based on the Supplier's requirements in the Buyer's data centre.
- The agent once installed will consume minimal CPU, Memory, and Disk but this will be inconspicuous to the end-user.
- The high level project plan included in the Suppliers proposal (requirement 2) will be amended and agreed by the Parties prior to commencing the work described in the SOW's.
- DXC shall provide an agreed reasonable level of support to assist with the integration of the tooling and with other suppliers to the Buyer if agreed through a change to this Call-Off Contract.
- The Parties have agreed to use the scripts developed during the POC for assessing network performance.
- The Parties have agreed that the only training to be provided will be on the job knowledge transfer as recorded in the SOW.
- Endpoints that become unusable after deploying the Tanium agent will be replaced by the Buyer and not be

subject to SLAs in accordance with the contract under which the endpoints are provided.

- Should any risk materialise or an assumption prove invalid from the Suppliers proposal then the impact of such shall be identified by the Supplier and the impact recorded through a Variation to this Call-Off Contract.
- When the Supplier deploys the Tanium software it offers no guarantee that all Tanium agents will be installed due to a number of common reasons for example, device not connected. Automatic redeployment will be in place but the Supplier cannot guarantee that the agents will install at this point. The Charges do not cover fault finding by the Supplier.

Support and Specialist Endpoint Delivery Services

An agreed managed service wrap shall be provided by the Supplier to the Buyer and will include:

-
- Support to Tanium for install & configuration of Tanium server & integration with HMPS AD
- Package & test Tanium agent, config and deployment.
- Deploy Tanium client software package.
- Remove Tanium client software package.
- Update firewalls to enable EUDs connecting via RAS and Quantum to access Tanium server (excludes PTTP devices)
- Update AV policy to exclude Tanium files & processes from AV scan
- Review of Tanium policy
- Provide subject matter expertise assistance on Tanium security aspects
- Add any risks discovered to this Call Off Contract project Risk Register
- Develop process for handling issues found which relate solely to this Call Off Contract
- Update firewalls to remove rules for access to Tanium server

The principles outlined in the Supplier Proposal v4 will form the foundation of the delivery and each agreed SOW will align as much as is practical to these core service design principles

All SOWs or Work Packages must be agreed in advance of the work commencing and at a minimum be approved in writing by the Programme Manager or the appropriate Programme governance established for that purpose. Minor, short-term or related SOWs may be agreed together as a Work Package.
