Annex 1 – Specification

BACKGROUND

Defra have committed to legally binding targets for biodiversity. These are:

- To halt the decline in species abundance by 2030
- To increase species abundance so that it is greater than in 2022 and at least 10% greater than in 2030
- To improve the Red List Index for England for species extinction risk by 2042, compared to 2022 levels
- To restore or create more than 500,000 hectares of a range of wildlife-rich habitat outside protected sites by 2042, compared to 2022 levels

Previous work has highlighted gaps in our knowledge for how to deliver the biodiversity species targets. Notable gaps in our evidence to inform target delivery include understanding;

- the contribution of actions within agri-environment schemes towards the abundance target,
- how much reduction of pressures is needed, through which actions and where to achieve the species abundance target (aquatic pressures and air quality are priority areas to evidence),
- the implications of climate change for delivery of the abundance target.

The work will aim to fill these spatial evidence gaps by addressing the following questions;

- What are the modelled impacts on species abundance in England, of land-use scenarios that take different approaches to meeting Net Zero (e.g. the nine net-zero land-use scenarios developed by UKCEH for Defra and DESNZ, whose approaches range from technology-dominated solutions to nature-based solutions)?
- How might other interventions (for example Agri-environment schemes, actions outlined in the plan for water) be best used to deliver the species abundance target alongside land-use change:
 - What are the most high-impact actions for influencing a) the abundance of species that contribute to the species abundance target and b) a theoretical species abundance indicator comprising all those species currently modellable?
 - What are beneficial combinations and spatial configuration of actions for influencing a) the abundance of species that contribute to the species abundance target and b) a theoretical species abundance indicator comprising all those species currently modellable?
- How might biodiversity outcomes of the scenarios differ under current and future climate?

This project will spatially and temporally model scenarios of current or future policy and how much these contribute to the species abundance targets. Scenarios should include different levels of ambition, different combinations of actions and spatial targeting of actions.

The work will support policy decisions on how best to deliver the legally binding species abundance target. Outputs will inform the design, implementation and timing of policies to deliver biodiversity

targets such as ELM, LNRs and Nature Recovery Network. This work should support Defra in ensuring that decisions on land use balance the requirements for climate mitigation with the long-term goals for biodiversity.

PROJECT DESCRIPTION

Work undertaken by UKCEH, which completed in June 2023, reviewed potential to build process-based (*4Pop) models (which can predict changes to species abundance in response to changes to land use/management) for taxa representative of Defra's species abundance target indicator. This project will build upon the scoping work and develop this work further by;

- developing scenarios to answer the questions outlined above and spatial layers describing these (e.g. by adding agri-environment and other interventions to the Defra/DESNZ net zero future land-use scenarios),
- completing the data collation for parameterising and validating the agreed *4pop models and models of freshwater invertebrate abundance,
- creating and validating new *4pop models and freshwater invertebrate models for agreed species/ taxa,
- exploring methods to link newly developed and existing *4pop process-based models with existing SDM's and/or physiological models to introduce responsiveness to climate changes,
- developing proxy indicator,
- running scenarios through the models.

Details of the objectives for the project for the period 22nd January 2024 to 31st March 2025 to are set out below.

Requirement 1: Developing Scenarios that will answer the project questions

- Milestone 1.1 Work with the Defra biodiversity and land use spatial data science team to produce a clearly defined list of future scenarios to model in later requirements of the project. The final list of scenarios should be discussed and agreed with the steering group. The following should be considered when deciding which scenarios should be included in the project;
 - Resources available for study
 - Outcomes from current or future policy and how much these contribute to biodiversity targets as well as variations to these (for example, different levels of ambition, different combinations of actions, spatial targeting)
 - Can any of the questions be answered by rapid assessment or do they require spatial modelling?
 - Can any of the scenarios build on wider Defra or JNCC modelling projects?
- Milestone 1.2 Data preparation for the agreed scenarios and generation of future land-use maps based on these scenarios (these could include the addition of small-scale field margin interventions (hedgerows, wild-flower margins, buffer strips), through to land-use changes at field-scale or larger, building on existing scenario-development work carried out at UKCEH).

Requirement 2: Data collection for the models. UKCEH have begun a review of the opportunities and data available for species on the species abundance indicator list. This work will continue this review and will involve data gathering from scientific literature and various species experts, to assess;

- Milestone 2.1: Collecting expert opinion questionnaires to parameterise models for bat species that contribute to the species abundance indicator
- Milestone 2.2: Collating and analysing the data required for developing freshwater invertebrate abundance models (e.g. to identify key drivers of abundance that would need to be included in the process-based modelling)

Requirement 3: Expanding the *4pop model family to build between 4-6 new adaptations and validation (including assembling of validation data).

- Milestone 3.1: build a prototype lept4pop model that includes the following functionality: a). sensitivity to the habitat preferences of larval stage moths and butterflies, b). dispersal movement ranges in the adult stage. Validating the lept4pop model against observational data.
- Milestone 3.2: Extending bat4pop model and validating against observational data
- Milestone 3.3: Build a prototype model of how interventions representative of agreed actions in the water quality teams policy pathway are expected to affect the abundance of freshwater invertebrates

Requirement 4: Exploring methods advancements to introduce responsiveness to climate changes into *4pop models

- Milestone 4.1: Scoping work to explore methods to link newly developed and existing *4pop process-based models with existing SDM's and/or physiological models, assessing feasibility of each for different taxa.
- Milestone 4.2: Ontological work relating the meaning of SDM outputs to the meaning of the process-based model outputs, expected to yield a small range of (~2- 3) possibilities for how these model outputs might be meaningfully linked or used to validate the outputs of linking *4pop with physiological models.

Requirement 5: Generate a theoretical species abundance metric

- Milestone 5.1: Combine outputs of the *4pop and freshwater invertebrate abundance models to explore generating a 'theoretical species abundance metric' and test by hindcasting over the time span of the real-life species abundance metric and assessing the extent to which it reproduces the observed trends during that period.

Requirement 6: Create modelled outputs from scenarios

- Milestone 6.1: Run the models on the land-use scenarios generated by milestone 1.2 to predict effects on species abundance.

Requirement 7: Developing methods to augment modelling for plant species

- Milestone 7.1: Trial methodologies for combining MultiMOVE with dispersal and extinction functions (e.g. from *4pop models) to incorporate impact of dispersal limitations on habitat suitability.
- Milestone 7.2: Develop links from air pollution and climate scenarios to the MultiMOVE inputs using a biogeochemical ecosystem model (MADOC)
- Milestone 7.3: Scope out a methodology for translating air pollution predictions into impacts on plant species cover (i.e. the metric that is equivalent to 'abundance' for plant species) using functions that convert habitat-suitability predictions into cover predictions.

Table 1 The models that will be used within the project (to be confirmed after agreeing on the specifics of requirements).

3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.

4.2 Goods clauses

(a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.

- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.
- (j) The Supplier will notify the Authority of any request that Goods are returned to it or the manufacturer after the discovery of safety issues or defects that might endanger health or hinder performance and shall indemnify the Authority against the costs arising as a result of any such request. Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.
- (k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.

4.3 Services clauses

(a) Late delivery of the Services will be a breach of the Contract.

(b) The Supplier must co-operate with the Authority and third party suppliers on all aspects connected with the delivery of the Services and ensure that Supplier Staff comply with any reasonable instructions including any security requirements.

(c) The Authority must provide the Supplier Staff with reasonable access to its premises at such reasonable times agreed with the Authority for the purpose of supplying the Services.

(d) The Supplier must at its own risk and expense provide all equipment required to deliver the Services. Any equipment provided by the Authority to the Supplier for supplying the Services remains the property of the Authority and is to be returned to the Authority on expiry or termination of the Contract.

(e) The Supplier must allocate sufficient resources and appropriate expertise to the Contract.

(f) The Supplier must take all reasonable care to ensure performance does not disrupt the Authority's operations, employees or other contractors.

(g) On completion of the Services, the Supplier is responsible for leaving the Authority's premises in a clean, safe and tidy condition and making good any damage that it has caused to the Authority's premises or property, other than fair wear and tear and any pre-existing cleanliness, safety or tidiness issue at the Authority's premises that existed before the commencement of the Term.

- (h) The Supplier must ensure all Services, and anything used to deliver the Services, are of the required quality and free from damage or defects.
- (i) The Authority is entitled to withhold payment for partially or undelivered Services or for Services which are not delivered in accordance with the Contract but doing so does not stop it from using its other rights under the Contract.

5. Pricing and payments

5.1 In exchange for the Deliverables delivered, the Supplier shall be entitled to invoice the Authority for the charges in Annex 3. The Supplier shall raise invoices promptly and in any event within 90 days from when the charges are due.

- (b) include all costs connected with the supply of Deliverables.

5.3 The Authority must pay the Supplier the charges within 30 days of receipt by the Authority of a valid, undisputed invoice, in cleared funds to the Supplier's account stated in the Order Form.

Details of the Authority's requirements for a valid invoice at the Start Date are set out in Annex 3.

5.5 If there is a dispute between the Parties as to the amount invoiced, the Authority shall pay the undisputed amount. The Supplier shall not suspend the provision of the Deliverables unless the Supplier is entitled to terminate the Contract for a failure to pay undisputed sums in accordance with clause 11.6. Any disputed amounts shall be resolved through the dispute resolution procedure detailed in clause 35.

5.6 If any sum of money is recoverable from or payable by the Supplier under the Contract (including any sum which the Supplier is liable to pay to the Authority in respect of any breach of the Contract), that sum may be deducted unilaterally by the Authority from any sum then due, or which may become due, to the Supplier under the

Contract or under any other agreement or contract with the Authority. The Supplier shall not be entitled to assert any credit, set-off or counterclaim against the Authority in order to justify withholding payment of any such amount in whole or in part.

5.7 The Supplier must ensure that its subcontractors and supply chain are paid, in full, within 30 days of receipt of a valid, undisputed invoice. If this doesn't happen, the Authority can publish the details of the late payment or non-payment.

6. The Authority's obligations to the Supplier

6.1 If the Supplier fails to comply with the Contract as a result of an Authority Cause:

- (a) the Authority cannot terminate the Contract under clause 11 on account of the failure to comply, provided this will not prejudice the Authority's right to terminate for another cause that may exist at the same time;
- (b) the Supplier will be relieved from liability for the performance of its obligations under the Contract to the extent that it is prevented from performing them by the Authority Cause and will be entitled to such reasonable and proven additional expenses that arise as a direct result of the Authority Cause;
- (c) the Supplier is entitled to any additional time needed to deliver the Deliverables as a direct result of the Authority's Cause;

- (b) demonstrates that the failure only happened because of the Authority Cause;

- (a) as to the financial stability of the Supplier such that it may impact on the continued performance of the Contract; or
- (b) as to the sustainability or health and safety conduct of the Supplier, subcontractors and supply chain in the performance of the Contract;

then the Authority may:

- (i) require that the Supplier provide to the Authority (for its approval) a plan setting out how the Supplier will ensure continued performance of the Contract (in the case of (a)) or improve its sustainability conduct or performance (in the case of (b)) and the Supplier will make changes to such plan as reasonably required by the Authority and once it is agreed then the Supplier shall act in accordance with such plan and report to the Authority on demand
- (ii) if the Supplier fails to provide a plan or fails to agree any changes which are requested by the Authority or materially fails to implement or provide updates on progress with the plan, terminate the Contract immediately for material breach (or on such date as the Authority notifies).

8.4 The Supplier must provide a list of Supplier Staff needing to access the Authority's premises and say why access is required.

This licence is non-transferable save that the Contractor may sub-licence it to its Sub-Contractors.

10.5 Where a Party acquires ownership of intellectual property rights incorrectly under this Contract it must do everything reasonably necessary to complete a transfer assigning them in writing to the other Party on request and at its own cost.
