Schedule 1: Services

Statement of Requirement – Data Services – “Data Quality Improvement (DQI) Project”

Objective

MOD delivers intricate, high value Defence programmes on behalf of the UK Government. The data that underpins delivery has both a complicated and complex picture. As described in the [Defence Data Strategy](#) the requirement exists that Data Management is driven across MOD to support better decision making. DE&S has completed a program of work that introduced DE&S to Enterprise Data Management (EDM). DE&S uses the Data Management Association (DAMA¹) framework to ensure a consistent and structured approach, this framework has been adopted across MOD and is led by Defence Digital.

Within DE&S, the intent of EDM is described as “To define, govern and improve the quality of DE&S data so that information derived from it can be trusted”. This placed great emphasis on the need to demonstrate both a clear understanding of the data and provide a meaningful indicator of the level of quality to support business efforts in tracking improvements in the quality of data. A standard process was established that generated both a Data Rules Catalogue which contains business consumable reports describing data, the tests applied, results, scores and listed table / rows where data failed the tests.

The DE&S EDM Data Quality process extracts Business Rules from business policy and processes, extrapolates data rules to match business rules, codes Standard Query Language (SQL) statements to test data against the data rules and then records and presents the Rules, Tests and Test Results in a consumable fashion that business side workers can easily understand. The Data Governance Office (DGO) team within DE&S Digital Data Services has a requirement for a range of skilled, Data Quality experienced experts, who, on a task basis, can produce and document the additional Data Rules Catalogue content required to provide a complete picture of DQ across DE&S.

The Data Quality Improvement (DQI) project intends to build upon the foundations of EDM and focus on improving DE&S staff members understanding of how improving data quality will deliver benefits via better decision making and improved business outputs. This will be achieved by establishing DQ Dashboards underpinned by information drawn from the Data Rules Catalogue.

Requirement

The key objectives of this requirement will be for the Supplier to provide a service that delivers DQI across DE&S by:

- Building upon the existing Data Quality (DQ) work through:

¹ DAMA Body of Knowledge V2

- Engagement with DE&S stakeholders and External Partners to ascertain datasets that underpin MI and other core Business decisions. Work with stakeholders to capture, document and validate DQ test results.
- Create additional content for the Data Rules Catalogue. Capturing Business needs, then articulating these with Business Rules, Data Rules and SQL coding to permit tests of data quality to be scored.
- Deliver to the DE&S Data Services team documented guidance and advice regarding the integration of content from the Data Rules Catalogue into DQ Dashboards.
- Build DE&S staff member's knowledge of Data Quality and how to contribute to improving the quality of the data they handle.
- Capture and document evidence of benefits realisation during all stages of the delivery of the taskings. Create PowerBI dashboard visualisations of data quality in conjunction with the Data Services Team and each Business Sponsor of the DQ dashboard.
- Utilise the DAMA framework to set the context for the DQ content.

Assumptions & Dependencies

All DQ data processing will be actioned within MOD systems, DE&S will provide laptops, user accounts and headsets to all resources engaged in the delivery of the tasks from this contract. Outputs will be outlined as deliverables in a Tasking Order Form. Work will be conducted either at Defence Equipment & Support, MOD Abbey Wood, Bristol, BS34 8JH or remotely as agreed by the DGO. All tasks will be performed using DE&S IT systems and within the DE&S Digital team processes. Resources should be Security Cleared (meaning current SC status with the National Security Vetting agency for the period of the task).

The Supplier must ensure that all the resource they provide are appropriately skilled and able to seamlessly integrate with the broader teams involved in supporting DE&S Data Services. The requirement is to define and populate the Data Rules Catalogue content using the existing procedure with new and additional data rules covering the full range and scope of DE&S Data Subjects, as listed below:

- Corporate Services
- Security & Resilience
- Infrastructure
- Governance & Assurance
- Equipment
- Project
- Safety & Environment
- Engineering
- Customer
- Commercial
- Integrated Logistics
- People (HR)
- IMIT
- Finance

An assumption is identified below that data sources are already available in the Analytics Environment. Where data sources are not readily available and a business need dictates priority, the data will need to be sourced and made available in the Analytics environment by existing ETL activity led by DE&S Data Services via their Data Warehouse operate process.

The supplier will provide Programme Management support to an agreed set of deliverables described in a set of taskings, as directed by the Data Services Head. This support should include weekly status reporting to the Data Services Head or the Data Services lead for the Task and milestone review and delivery acceptance meetings. Progress of benefits realisation from work delivered via taskings from this contract must be reported at tasking milestone reviews.

Access to the Data Architecture outputs from the EDM project will be available to the resources assigned to the task. Resource descriptions and maximum Skills Framework for the Information Age (SFIA) levels are as follows:

Discipline	Output	Max Level
Profile Data Quality	An appropriate set of DQ Dimensions that business users can exploit to understand the data quality for their specific data subjects.	SFIA 6
