Schedule 4 - Statement of Requirements

ICP-OES SPECTROMETER

1. Background

1.1 The Environmental and Industrial Hazards (EIH) Laboratory at the Institute of Naval medicine requires an Inductively Coupled Plasma Optical Emission Spectrometer (ICP-OES) to replace the current instrument which has reached the end of its useful life and is no longer fully supportable by the manufacturer. This system was purchased some 13 years ago, has exceeded its expected lifespan, and is becoming unfit for purpose due to age related performance issues.

1.2 The instrument will primarily be used for analysis of major elements and trace metals in a range of aqueous samples including:

- Analysis of acid digests of soils, bulk materials and filters in accordance with COSHH and the Control of Lead at Work regulations¹
- Determination of major elements in raw, potable and bottled water samples in accordance with the requirements of service doctrine^{2, 3, 4} and UK water legislation^{5, 6}

2. The following specific technical requirements for system components and performance should be noted:

- a. The instrument should be supplied with a sample introduction system suitable for the applications listed above in section 1.2. The laboratory is ISO 17025 accredited and as such uses Quality Control charts to monitor method performance. Instrument signal stability and precision are therefore key requirements for the system to minimise unnecessary Quality Control failures and signal drift should be eliminated as much as possible.
- b. The system should be usable in the laboratory in ambient temperatures up to 30°C.
- c. As samples may be soil, dust, filter or other acid digests a high matrix tolerance is required.
- d. The instrument may be required to analyse long runs of samples overnight so stability over this period is essential.
- e. The system should be designed to minimise routine maintenance requirements as much as possible.
- f. Analytes of both low (ppb level) and high (possibly % level) concentrations may need to be quantified in the same samples, so a large linear dynamic range is required.
- g. The laboratory is seeking to improve its environmental impact and therefore low total argon and power consumption is highly desirable. The ability for the instrument to automatically control power on/off of ancillary equipment such as a chiller is also of interest.
- h. The instrument should be provided with a suitable PC and software to allow operation of the system.
- i. The instrument must be software controlled by one integrated programme covering all

aspects of instrument operation including computer control of all physical components of the system including sample introduction, plasma, torch alignment, RF generator and detector etc.

Supplied software should allow:

- User definable method parameters such as calibration fit and calibration range & concentrations
- ISTD use
- Interference deconvolution
- Import of external data to create sample runlists
- Realtime views of analytical data and calibration curves
- User customisable report format and export of results into Excel spreadsheets
- Automatic shutdown of system after analysis to allow independent running
- Examination and reprocessing of data
- Software support and updates should be included as part of the tender

j. The system should be provided with an autosampler capable of holding a minimum of 120 samples (standard 15ml centrifuge tubes) and have separate locations designated for the use of calibration and QC solutions (standard 50ml centrifuge tubes).

k. The autosampler should be software controlled.

3. Installation. The package must include delivery, installation and operator training for at least two users.

4. Warranty. A warranty period of one year is expected with the purchase and we require this to be extended by a further 9 years (10 years in total). This cover is expected to provide one preventative maintenance visit per year as well as priority breakdown cover, which itself should include engineer call out & travel fees and non-consumable parts.

The warranty will commence from receipt of the goods.

5. Contract start date. This is to be as soon as the successful supplier can deliver the instrument.
