Annex 4 – Tender Submission

North Staffordshire groundwater model development project

1. Scope

The scope for the project is described in detail in the Environment Agency (EA) scope document provided on 4th October 2024 which has not been repeated in this document. This document (file name NS_DEV_spec_041024.pdf) is referred to throughout as the 'EA's scope document'.

1.1. Assumptions

Deliverables are described in the EA's scope document Section 3.3.3. Other assumptions related to the modelling scope for the 4R model and the MODFLOW model are given in Appendix B.

1.1.1. Calibration tasks

There will be a focus on achieving a calibration to long term groundwater level trends and total observed flows. Layering with the Permo-Triassic Sandstone (PT Sdst) should be taken into account when evaluating calibration metrics.

We have planned to undertake six calibration runs for the 4R model, six sensitivity analysis runs for Salop Formation properties, and 12 calibration runs for extension area calibration.

1.1.2. Reporting

We have not included to update or repeat the reporting of any of the conceptual model work carried out at the feasibility stage. The report will include a limited number of figures showing model outputs, to illustrate key points only; detailed model set up figures and results will be largely in electronic format. The report will be in electronic format only (no hard copies). Draft and Final report versions will be issued (assuming one round of consolidated comments from the EA, Severn Trent Water and an expert reviewer).

2. Costs

The pricing strategy for this project will be fixed price as specified in the EA's scope document. Payment Milestones are listed in the EA's scope document. The costs are provided in Appendix C in the format requested by the EA and attached as a separate file. Our proposed Lump Sum is £77,156.25 + VAT.

3. Risk matrix

The risks identified for the project and mitigation measures are shown in the table below.

Risk	Initial risk category	Mitigation	Remaining risk category
Uncertainties associated with developing a new geological model for an area with complex faulting and sparse borehole data.	Yellow	Our proposed geological model team developed the geological cross sections for the conceptual model phase and are familiar with the available borehole data. As a 'simple as possible' approach to the geological model is requested, faults with relatively small offset will be omitted from the models. A single PT Sdst layer has been suggested by the EA so detailed delineation of formations within the PT Sdst is not required.	Green
Uncertainties associated with developing a new groundwater model for a previously unmodelled region.	Yellow	Stantec's team includes several individuals who worked on the North Staffs conceptual model report for the EA, and are therefore highly familiar with the available data and conceptualisation. They have extensive combined experience of modelling Permo-Triassic Sandstone aquifers and can bring their understanding to the benefit of this project.	Green
Data Provision: timely provision of data and existing models for use on the project is critical to ensuring delivery to programme . Delays in obtaining these data and the models will affect both the programme and efficiency of project delivery.	Red	Stantec has in-depth knowledge of the available data through its previous work on Water Industry National Environment Programme (WINEP) projects and the previous conceptual model phase of work, so already holds much of the data. The EA have recently updated the East Shropshire Groundwater Model (ESM) model so should have the model and pre/postprocessing files readily available.	Yellow

Risk	Initial risk category	Mitigation	Remaining risk category
Re-calibration: The recalibration activity requires more time and effort to achieve an acceptable level of performance for the model to be accepted than anticipated, introducing programmatic and budgetary risk.	Red	We will have a phased approach to calibration, which we will communicate to the EA; this will include the development of performance metrics at the start of Task 2.1. Our knowledge of the available data and behaviour of the groundwater system will enable realistic criteria to be set (for example, layering with the PT Sdst should be taken into account when evaluating calibration metrics).	Yellow
Requirement to use existing ESM model, developed by third parties - risk that errors are found within the ESM.	Red	There is a requirement to use the existing ESM model which was altered substantially by Groundwater Science in 2021 and much of the original ESM has been modified. This has subsequently been converted to MODFLOW 6 by the EA who then made some corrections to the model. The details of the EA's changes are reported in detail. It is considered likely that all major errors in the model have already been identified and corrected, and that any remaining errors should be relatively insignificant. It is assumed that correction of any further errors that may be discovered within the current ESM is <u>outside the scope of this project</u> . It is considered unlikely that any remaining errors in the ESM would affect the model extension area significantly as there is little flow across the ESM eastern boundary.	Yellow
Staff: Assigned staff become unavailable due to over-resourcing or an external reason.	Yellow	Our hydrological sciences team operates a resource system that allows allocation of staff three-months in advance, allowing the ring-fencing of key project staff. If an external factor impacts our proposed team, each key role will have a nominated 'reserve' of equal experience and skill. The principal resource will brief the reserve on progress fortnightly, allowing, if required, the transfer to occur with minimal disruption. Our staff are dedicated to delivering the project and we recognise the importance of the EA to us as a client, giving the project priority.	Green

Appendix A: Programme

As specified in the EA's scope document, a period of four weeks for reviewing the draft report has been included in the project programme which will be followed by a period required for completing the final report.

Four meetings have been included as specified in the EA's scope document. All meetings will be in Teams, so no travel required. There will be technical review meetings as specified below.

Stantec will provide a project progress summary email will be to the EA every two weeks with a financial and progress update.

Appendix B: Modelling assumptions

4R model components (and MODFLOW streams)	ESM	North Staffs	Comments on merging	Data required	Assumptions
Time period	1960-2019	1968-2002	New model will be 1960-2019	N/A	
PE	CHES5	EA PET	EA PET to be used	EA PET for whole model area (new grid area required)	Climate datasets will be used as provided by the EA and no additional processing or analysis will be required.
Rainfall	CEH GEAR	HAD UK	HADUK to be used. Expecting 10% less recharge to ESM based on EA testing, but there is a specific task to compensate for this.	HADUK 1km daily grids for whole model area (1960 not available so repeat 1961) (new grid area required)	
Soils	As 2013 model with 'Revised parameters'.	Natmap1000	Don't need to merge the soils data sets	N/A	
Land Use	Something complicated with satellite images and OS maps	UKCEH Land Cover Map 2015 data.	Don't need to merge the land use data sets	N/A	
Combinde Soil Landuse classes	19 soil-land use combinations (4 land use classifications of Arable, Grassland, Suburban and Woodland multiplied by the 4 soil classes of clay, loam, sand and silt. There are the three special case classes of urban, open water and riparian (but riparian is not utilized in the model).	15 classes: 4 soil classes: clay loam, sandy loam, loamy sand and peat. 5 classes: urban, open water, arable, grassland and woodland.	A direct merge of the two models will result in too many classes so will need to simplify in order to calibrate the model. Use NSRI soils data and CEH LCM data to derive a new soil-land use grid for the ESM. The new grid will inherit the FAO variables from the N Staff model, but the parameters will change anyway during recalibration with new climate datasets.	NSRI and LCM data for the ESM model area.	Existing 4R datasets will be used
Crop/soil parameters	Based on original ESM (may have been modified).	Based on WMW.	ESM will need to change during recalibration anyway, ideally need to make consistent across the area to make calibration easier.	N/A	
Runoff	19 classes	6 classes	ESM will need to change during recalibration anyway, ideally need to make consistent across the area to make calibration easier.	N/A	
Routing network	Includes most of extension area, missing a small part of Trent catchment. Based on topo grid derived from 2m LIDAR data.	None	Existing routing looks fairly accurate in extension area we will need to extend into the small missing areas.	Routing derived from LIDAR data for extension area (2m grid) (minimum elevation in 250m cell).	Any changes in the original ESM area are out of scope.
Stream cells elevation	LIDAR (defined in 2013 model)	None	Not aware of any stream surveys (checked STW Meece, Burnwood projects).	LIDAR data for extension area (2m grid) (minimum elevation in 250m cell).	
Stream cells K	Needs simplification (separate task).	None	Define extension stream cells at same time as ESM simplification.	Base on surface geology and routing network (upstream catchment area).	
Mains Leakage	Steady state	Steady state	Direct merge of the two models.	N/A	Existing 4R datasets will be used.
SW abs. and discharges	Assume no changes required	Already in the 4R model not very many of these, Trent gauge inflows are already in N Staffs 4R.	Direct merge of the two models.	N/A	Existing 4R datasets will be used.

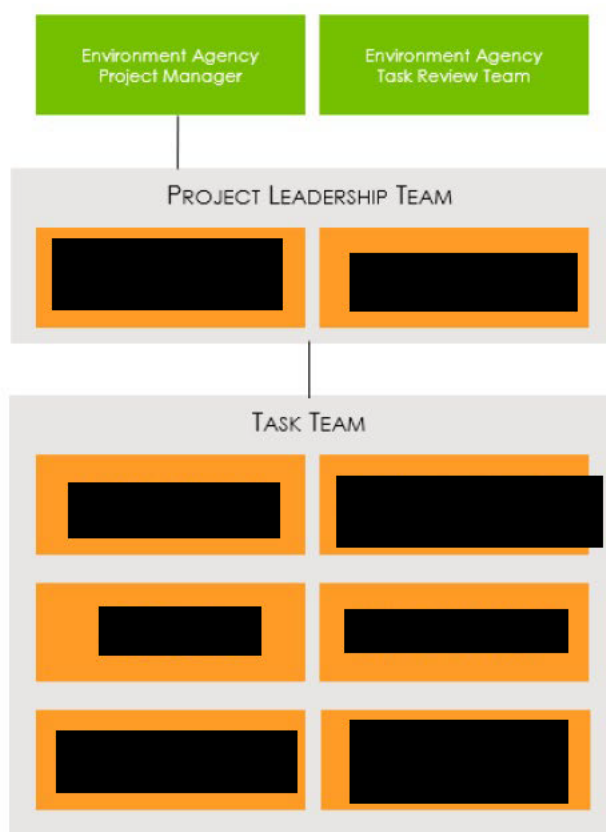

North Staffordshire groundwater model development project

MODFLOW model components	ESM	Comments on extending			
Topography	250m topo grid derived from 2m LIDAR data.	Complicated to process LIDAR, prefer 50m grid for geological framework.		Topography 50 m grid (Terrain 50 - Stantec have this already).	
Geology layers	5 (Superficials, 3 PTS layers, Salop).	Superficials are discontinuous, represented in 4R and can use BGS superficial thickness data for ESM extension area. Will initially combine the 3 PTS layers and re-assess this during model calibration. Bridgnorth Sandstone excluded east of Apedale Fault. Helslowen Fm exposure north and east of Tittensor GWMU would be combined with Salop layer. Will consider the best way to "combine" the three sandstone layers whilst maintaining appropriate lateral connectivity with the existing five-layer ESM (e.g. three grid layers with two excluded as "pass-through", or three active grid layers representing equal vertical divisions of a single PT Sdst unit).	A 'simple as possible' approach for the geology model is recommended, given the lack of data to constrain the water balance, and uncertainty in aquifer properties, there is little justification for building a complex model.	Geological modelling will utilise Seequent's Leapfrog Works software to create a new 3D model of geological layers in the ESM extension area. Units will include each of the Bishops Wood, Hatton and Tittensor GWMUs, as well as a 1-2 km "buffer zone" comprising Carboniferous strata to the north and Mercia Mudstone to the south (as mapped in figure 2 of the tender document). These volumes will then be added into the existing ESM geological model. Three main faults in the extension area will be modelled (Swinerton Fault, Apedale Fault and Adbaston Fault), however faults with a relatively small offset will be omitted, such as the complex N-S faulting in the eastern part of Bishops Wood GWMU. It is unclear how faults extend into the confined zone. The 3D block model will be translated into a MODFLOW input grid for the groundwater model using Leapfrog's Hydrogeology solutions extension.	<ul style="list-style-type: none"> The BGS National Superficial Thickness Model will be used to model the superficial deposits. No provision is made for the interpretation of seismic data. The Helslowen Fm is exposed north and east of Tittensor GWMU - assume to combine with Salop into a 'Carboniferous' layer. Assume no representation of the Swinerton-Swinerton dyke. The lack of data at depth in the north of the extension area introduces uncertainty. Additional digitisation and spatial analysis of Geotitles (BGS) borehole records (scanned logs) will be necessary to fill data gaps away from the feasibility study's cross sections. To maintain timely delivery, we will limit this to 15 logs, selected to maximise relevancy by prioritising location, quality and depth.
Aquifer properties		Initial values of aquifer properties to be based on existing model.			
Lateral boundary conditions		Consider the influence of the River Trent along the eastern edge of the extension area.			
PWS Abstractions	Assume no changes required.	~6 PWS, we have already collated the data, need to agree appropriate rates for pre 1981 with STWL.			No further abstraction data collation will be required (other than consultation with STWL).
Non-PWS abstractions	Assume no changes required.	Abstr Data is already processed, assume we add 11 licences >0.1 Mvd max annual.			
Compensation schemes	Assume no changes required.	Add Whitmore compensation to Meece with MODFLOW 6 MOVER package.			
Fault locations	Assume no changes required.	Add in based on mapped surface location, Swinerton dyke also a barrier.	Consider juxtaposition of faulted units and representation of lateral connectivity.		Any changes in the original ESM area are out of scope.
Model files		We assume that the EA will supply all the MODFLOW 6 and 4R input files for the existing ESM, along with the abstraction/discharge pre-processing spreadsheets and any model specific pre- and post-processing utilities / scripts / spreadsheets. We also assume that the EA will supply the Groundwater Vistas project used in the conversion to MODFLOW 6.			
Report	We assume there is no need to update or repeat any of the conceptual model work. Report will include a limited number figures showing model outputs, to illustrate key points only. Detailed model set up figures and results will be largely in electronic format. Report will be in electronic format only (no hard copies). Draft and Final report versions will be issued (assuming one round of consolidated comments from EA/STWL/expert reviewer).				
Meetings	All meetings will be in Teams, so no travel required. There will be technical review meetings as specified in the Gantt plus PM update email every 2 weeks.

3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.

4.2 Goods clauses

- (a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.
- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.
- (j) The Supplier will notify the Authority of any request that Goods are returned to it or the manufacturer after the discovery of safety issues or defects that might endanger health or hinder performance and shall indemnify the Authority against the costs arising as a result of any such request. Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.

(k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.

(g) On completion of the Services, the Supplier is responsible for leaving the Authority's premises in a clean, safe and tidy condition and making good any damage that it has caused to the Authority's premises or property, other than fair

wear and tear and any pre-existing cleanliness, safety or tidiness issue at the Authority's premises that existed before the commencement of the Term.

(h) The Supplier must ensure all Services, and anything used to deliver the Services, are of the required quality and free from damage or defects.

(i) The Authority is entitled to withhold payment for partially or undelivered Services or for Services which are not delivered in accordance with the Contract but doing so does not stop it from using its other rights under the Contract.

5. Pricing and payments

6. The Authority's obligations to the Supplier

6.1 If the Supplier fails to comply with the Contract as a result of an Authority Cause:

then the Authority may:

- (i) require that the Supplier provide to the Authority (for its approval) a plan setting out how the Supplier will ensure continued performance of the Contract (in the case of (a)) or improve its sustainability conduct or performance (in the case of (b)) and the Supplier will make changes to such plan as reasonably required by the Authority and once it is agreed then the Supplier shall act in accordance with such plan and report to the Authority on demand
