

## Multi-Use Games Arena

The picture above illustrates the area to be fenced using new Duo-8 sports fencing, tennis will be the only sport played on the double width pitch.

Heavy duty "Duo 8 Sport Fence", this fencing has been specifically designed for strength and durability, due to its incredible versatility and anti-climb properties this type of fence is used for security as well as recreational sports.

As well as Councils and Sports Facilities, our clients also include the MOD and the Prison Services.

This unobtrusive ball court fence is built to last, as you will see from the pictures, we increase the strength of the lower 1200mm sections to accommodate the stress these areas experience, this is because 90% of all ball impacts are to the lower section, goal backs also have stronger materials used for the same reason.

Galvanised as standard prior to the application of green polyester powder coating.

The height of the fence is 4.0m, secured onto 50mmx100mm posts at 2.0m centres for maximum strength. This height of fence is recommended to reduce ball travel outside the area, lower options are available but may affect ball containment.
