Buyer contractual details

This Order is for the G-Cloud Services outlined below. It is acknowledged by the Parties that the volume of the G-Cloud Services used by the Buyer may vary during this Call-Off Contract.

G-Cloud lot:	This Call-Off Contract is for the provision of Services under: N/A.
G-Cloud services required:	The Services to be provided by the Supplier under the above Lot are listed in Framework Section 2 and outlined below: Since the inception of the supply resilience workstream in 2013, the Department of Health and Social Care (DHSC) has been involved in 62 supply disruption events affecting medical devices and clinical consumables supplied to the NHS.

Seven product groups have been identified as Products of Concern. All these products are essential for the delivery of life saving care and there is no viable alternative product or treatment identified, should these products become unavailable.

A fundamental requirement for managing supply resilience is visibility of supply chains and the arrangements that suppliers have in place for ensuring continuity of supply.

A need was identified to develop a process for collating information from suppliers. The requirements of this were:

- Efficient collection of data in electronic format
- Capability for analysis and evaluation of responses
- Ability to capture information for suppliers beyond tier 1.
- Geographical representation of supply chain structure for specific products of concern
- Linking supply chain information to global event alert services, to provide early warning of potential supply disruption incidents.

In 2015, the Department piloted the Supply Risk Assessment (SRA) tool which was procured through the G-cloud and hosted on the SRS cross-government platform.

The outcome of this pilot was successful in terms of customisation to DHSC requirements, quality of information obtained, analysis and feedback functionality and user interface. The process was rolled out to cover a larger number of critical suppliers and products in January 2016, again procured via the G-cloud and hosted on the SRS platform. The tool is currently in its fourth year of full use.

The SRA tool provides granular detail on the supply chain structures and resilience arrangements for 21 key suppliers covering 14 product groups. This has proved invaluable in informing engagement with suppliers, identification of improvement actions and development of commercial strategies. In addition, the information has allowed quick assessment of threats and the impact of global events, allowing for reliable briefing of ministers and senior officials. The tool also acts as a real time repository for supplier data, allowing them to maintain contact details of key responders that the DH can contact in the event of an incident.

	The systematic process introduced through use of the tool has also helped to establish the issue of supply resilience as a priority with key suppliers. There has been a noticeable improvement in suppliers' systems and resilience arrangements between the 2016 and 2019 responses. The SRA tool has proven to be a highly effective tool in the management of supply resilience with key suppliers and product groups. The information provided requires regular update and remains important for the DH to maintain. As the DHSC has collated valuable intelligence from the resilience planning for the UK's exit from the European Union (EU) over the last 24 months, and with the increased focus on ensuring resilience of major suppliers to the DHSC, there is now a requirement to develop a wider-reaching Supply Resilience Risk Assessment Tool to build on the existing approach and to capitalise on the increased information now available on a wide range of medical suppliers. This development of the specification for any new system would require extensive stakeholder engagement with other DHSC teams (Eg Contract Management, Medicines). For example, what other data do we need to consider (eg suppliers' financial stability) and possibly other stakeholders such as ALBs (eg Blood and Transplant) to ensure a once-only approach to supplier resilience across the health system. In view of this, there is a requirement to maintain an online Supply Risk Assessment tool for the next year, whilst a new, more detailed, specification is devised, with cross-Department stakeholder input. Due to the expected timescale this engagement and specification could take, the option to extend the licence for a further 12 months would be prudent to prevent loss of SRA capability during transition.
