

Appendix E – Example Data Mappings

Description and Purpose:

This Appendix consists of a zipped archive containing spreadsheets providing illustrative mappings from fictional source datasets to the NUAR Data Model and through to an example user interface, with potential mappings to UI layers and attribute values to display to the user.

The examples given are purely illustrative and do not represent any real-life asset owners. All company names, individual names and other details shown are entirely fictional. All telephone numbers are taken from a list reserved by Ofcom for dramatic use.

These files are intended to provide an indication of the type of work involved in mapping source data from asset owners in different sectors to the NUAR data model, and an indication of how data in the NUAR data model may be displayed to end users. The sectors, datasets, data content and target mappings are not exhaustive, and are provided for illustration only. Not all target fields and Feature Types in the NUAR Data Model are represented in these illustrative mappings.

The zipped archive was created using the Windows 10 compressed folder tool, and can be viewed in Windows 10 File Explorer or decompressed using an off-the-shelf zip/compression tool.
