2 PROGRAMME

As requested in support of Arcadis response to Quality Question T2 we are pleased to present based on the current understanding of geological and hydrogeological conditions at all the locations, a provisional programme of the works in Appendix A.

This programme is only indicative to lay out the proposed timeline of notable tasks for each site and is subject to change and finalisation following confirmation of land access agreements and other considerations. As Arcadis has a range of office locations including a number locally based to the proposed work areas, we can provide increased flexibility and a greater range of options to respond to change during the project lifetime.

3 STAFF CURRICULUM VITAE (CV'S)

As requested in support of Arcadis response to Quality Question T3 we are pleased to present within Appendix B the CV's of the following key staff as referenced in the main response text:

4 PRICE

4.1 Pricing Schedule

The total fee for the works is **£176,532.53**. For a breakdown of the fees, please refer to the Pricing Schedule submitted with this response.

APPENDIX A

Programme

This image is a large, solid black rectangle that occupies the majority of the frame. It appears to be a redaction of sensitive information or a placeholder for a missing image. There are no discernible features, text, or patterns within the black area.

APPENDIX B

CV's

The first of these is the fact that the system is not a simple one. It is a complex system, and as such, it is not possible to understand it by looking at its parts in isolation. The system is a whole, and it is only by looking at the whole that we can understand it. This is the first principle of systems thinking: the whole is greater than the sum of its parts.

The second principle is that the system is dynamic. It is not a static system, and it is not a system that can be understood by looking at a single point in time. The system is a process, and it is only by looking at the process that we can understand it. This is the second principle of systems thinking: the system is a process, and it is only by looking at the process that we can understand it.

The third principle is that the system is interconnected. The system is not a collection of independent parts, and it is not a system that can be understood by looking at its parts in isolation. The system is a network, and it is only by looking at the network that we can understand it. This is the third principle of systems thinking: the system is a network, and it is only by looking at the network that we can understand it.

The fourth principle is that the system is self-organizing. The system is not a system that is controlled by an external force, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that organizes itself, and it is only by looking at the system that we can understand it. This is the fourth principle of systems thinking: the system is self-organizing, and it is only by looking at the system that we can understand it.

The fifth principle is that the system is resilient. The system is not a system that is fragile, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is resilient, and it is only by looking at the system that we can understand it. This is the fifth principle of systems thinking: the system is resilient, and it is only by looking at the system that we can understand it.

The sixth principle is that the system is adaptable. The system is not a system that is rigid, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is adaptable, and it is only by looking at the system that we can understand it. This is the sixth principle of systems thinking: the system is adaptable, and it is only by looking at the system that we can understand it.

The seventh principle is that the system is sustainable. The system is not a system that is unsustainable, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is sustainable, and it is only by looking at the system that we can understand it. This is the seventh principle of systems thinking: the system is sustainable, and it is only by looking at the system that we can understand it.

The eighth principle is that the system is equitable. The system is not a system that is inequitable, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is equitable, and it is only by looking at the system that we can understand it. This is the eighth principle of systems thinking: the system is equitable, and it is only by looking at the system that we can understand it.

The ninth principle is that the system is just. The system is not a system that is unjust, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is just, and it is only by looking at the system that we can understand it. This is the ninth principle of systems thinking: the system is just, and it is only by looking at the system that we can understand it.

The tenth principle is that the system is peaceful. The system is not a system that is not peaceful, and it is not a system that can be understood by looking at its parts in isolation. The system is a system that is peaceful, and it is only by looking at the system that we can understand it. This is the tenth principle of systems thinking: the system is peaceful, and it is only by looking at the system that we can understand it.

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 1996).

There is a growing awareness of the need to address the problem of undernourishment. The United Nations World Food Programme (WFP) has been established to coordinate international efforts to combat hunger. The WFP is the largest humanitarian organization in the world, with a budget of \$4 billion in 1996.

The WFP is a joint venture of the United Nations and the United States. It was established in 1961 and has since then received support from over 100 countries.

The WFP's mandate is to provide emergency food assistance to people who are unable to meet their basic needs. It also works to improve food security and nutrition in the long term.

The WFP's work is carried out through a network of national and local organizations. It also works closely with the United Nations Development Programme (UNDP) and the United Nations Children's Fund (UNICEF).

The WFP's work is carried out in over 100 countries. It has a presence in all of the world's major food-producing regions.

The WFP's work is carried out through a network of national and local organizations. It also works closely with the United Nations Development Programme (UNDP) and the United Nations Children's Fund (UNICEF).
