

Plan View - Banner Details Scale 1/50 @ A3

Section View - Banner Details Scale 1/100 @ A3

Notes:

The proposal consists of a Banner and Frame to be fixed above the front entrance of the world museum to facilitate additional advertising for NML, specifically for the large exhibition planned for July 2020.

Enabling works

Currently above the front entrance there is an art installation consisting of metal grills to 3no. alcoves. This artwork will be removed by NML prior to the installation of the Banner and Frame, and the alcoves will be clear.

Frame

It is proposed that the frame will utilise these voids to help strengthen the fixings to the building. The frame will consist of a back frame, and fixings into the internal side of the entrance wall, and a front frame that will be used to fix the banner to. The two frame will then be connected through the voids, allowing the use of the existing fixings from the artwork, allowing additional fixings to further strengthen the framework.

This frame can be made from Timber or Metal, and this will be the contractors choice.

Front Banner

The banner will be fixed to the front frame, that will be constructed from either metal of Marine Plywood. This will be exposed to the elements so must be waterproof and be able to last the duration of the exhibition (July - Nov 2020).

The banner will be made from either Mesh material of PVC, with the Graphic printed onto this. The exact dimensions and artwork of the banner will be supplied by NML.

General Notes

-The contractor is to price for supply and installation of Frame and External Banner.

-The installation is to take place early June 2020. (Works to be undertaken out of normal working hours)

-The front entrance causeway includes a bridge over a moat to the External perimeter of the World Museum. This cannot take any large loads, so must be accounted for when considering installation options (eg. Use of cherry Pickers)
