### **Schedule 9 - Statement of Requirement**

**CHC/599**

**21FEB19**

#### **STATEMENT OF REQUIREMENT FOR THE PROCUREMENT OF AN ENABLING SUPPORT CONTRACT FOR MAINTAINANCE, REPAIR, MODIFICATION AND REPLACEMENT OF CHINOOK COVERS**

##### **Issue**

1. The current stock of Chinook aircraft cover sets are old and wearing with age. Current stocks are also inadequate to sustain fleet Operational Commitment due to the attrition/loss of sets as identified by Forward. The Chinook Delivery Team (ChDT) is unable to support the current stock of existing aircraft covers because it does not have an enabling support contract in place to cover the repair, modification and procurement of replacements. Added to this, further modifications have been carried out to the aircraft which have resulted in some of the covers no longer fitting correctly allowing the ingress of water onto sensitive electrical and avionics systems. This presents a potential flight safety hazard and airworthiness risk, due to these systems 'shorting out' and/or system malfunction.

##### **Background**

2. ChDT does not have an enabling support contract in place for the Chinook covers, thus is currently unable to satisfy any requests for repair, replacement or purchase of aircraft covers.
3. Standard Chinook covers do not fit the UK Chinook due to its unique external profile. For this reason, the existing aircraft cover sets have been designed specifically for the UK Chinook Fleet and are also unique.
4. Further modifications have been carried out to the aircraft since the creation of the original covers. This has resulted in some of the covers no longer fitting correctly allowing the ingress of water onto sensitive electrical and avionics systems. This presents a potential flight safety hazard and airworthiness risk, due to these systems 'shorting out' and/or system malfunction.
5. With the move of Chinook from Static Operations to Contingent Operations, aircraft will be deployed to austere and embarked locations again where there is no hangar facility. Should inclement weather conditions prevail, there may be a resulting increase in the use of aircraft covers.
6. Owing to their age, the condition of the existing stock has deteriorated and due to attrition, there is insufficient stock. Forward have placed several demands for replacement aircraft covers, which ChDT have been unable to fulfil.
7. Finally, there are insufficient stock of transportation covers, used during the movement of aircraft by road to Depth and air/sea transportation ports which has resulted in Joint Aircraft Recovery and Transportation (JART) refusing to move aircraft by road which has had a significant impact on the deployment of aircraft.

## Requirement

8. An enabling support contract will be put in place so the following needs can be met in support of the Chinook aircraft covers at Forward:

- A. Procurement of new aircraft covers
- B. Repair and maintenance of aircraft covers
- C. Modification of aircraft covers and aircraft cover designs to align with aircraft enhancements

### A. Procurement of New Aircraft Covers

9. The covers procured through this contract shall meet the existing dimensions and specifications (where possible) in accordance with the drawings at Annex C to the Statement of Requirement (SOR). The design of the covers shall meet the following criteria;

- Waterproof
- Windproof - Covers shall fit in such a way to prevent damage to aircraft in windy conditions but loose enough for ease of fitment and removal in arctic conditions. Hooks and buckles which if unhooked may cause damage to the aircraft in windy conditions are to have protection sleeves fitted.
- Glazed areas shall be protected against scratches and abrasion. Patches should be large enough to allow for misaligned fitting of cover.
- Covers are to be protected from sharp protrusions on the aircraft by sewn-in leather patches. Other possible chafing areas are to be protected by sailcloth.
- Vulnerable areas of aircraft i.e. Pitot Heads etc. should be clearly identified with a warning stencilled on the outside of the cover e.g. 'No hand hold', 'Fragile' etc.
- Permissible walkways should be clearly identified and non-slip materials sewn onto the cover. Areas each side of the walkway shall be stencilled 'No step'.
- Protrusions from aircraft which are concealed when cover is fitted are likely to cause injury and should be highlighted by the fitting of red warning patches and/or warning pennants.
- Due allowance is to be made in the manufacture of the cover to allow for shrinkage due to environmental conditions.
- Tie tapes and straps etc. are to be usable with a gloved hand. Stowage pockets are to be provided for excessively long free end so straps to prevent flapping of straps in windy conditions.
- Ability to provide protection in extreme weather conditions.
- Lightweight and easily attachable to the aircraft.
- Interoperable with existing covers.
- Heat protection is required as detailed within Annex C Aircraft Cover Drawings for the following covers;

1730-99-235-7696 - COVER, ENGINE w/o EAPS PORT
