Summary of Requirement

Standards and Testing Agency Service requirements STA-0313 Item Bank

The Item Bank Data Warehouse is a web-based database designed to provide secure storage and version control of all questions, items and supporting materials produced during the test development process. (An item is the smallest component of a test question to which a mark can be awarded.)

The Item Bank supports integration of the item metadata with data and evidence collected from external expert reviews and trials in schools over a three-year process. The use of analytics in a business intelligence context ensures accountability, demonstrates evidence that assessment materials are fit for purpose and informs decisions on construction of the live assessments.

Reference	Statement of Requirement
	Background
	The Standards and Testing Agency ("STA"), has a requirement for the continued provision and support of a computerised system (Item Bank Database) to help improve the efficiency and effectiveness of the test development process in support of the National Curriculum Assessments Programme.
	Introduction & Definitions
	All requirements are mandatory. Wording Conventions The Department for Education shall be known as 'the Department'.
1.	Technical Overview
	For the purposes of this contract, the Item Bank solution (hereafter referred to as the 'Item Bank') can be considered to consist of the following logical groupings: <ul style="list-style-type: none"> • Repositories; • Analytical tools; • Evidence Gathering tools; • User Authentication; and • Security (i.e. restricting access to repositories and tools).
1.1	Repositories
	Within the Item Bank, there are two types of repository: <ul style="list-style-type: none"> • A repository for the storage of questions, items, and stimuli (along with their associated metadata, supporting documents and psychometric information); and • A repository for the storage of tests and expert reviews (evidence gathering sessions) (along with their associated metadata).
1.2	Analytical Tools
	To make use of the repositories, continued access to existing tools is required. For example: <ul style="list-style-type: none"> • The on-screen manipulation and display of questions, items, and stimuli; • The analysis of item and stimulus usage and subsequent creation of reports based on this analysis. <p>These analytical tools will continue to be capable of importing and exporting data in an agreed format.</p>
1.3.	Evidence Gathering Tools
	Following analysis of information from the repositories, users will continue to have access to tools which facilitate the creation of evidence gathering sessions, including expert reviews and tests. The sessions will subsequently enable the user to export data from the expert reviews and tests and export the tests (in an agreed format) such that the tests can be further manipulated via a third party publishing tool.
1.4.	User Authentication and Security
	The existing arrangements for user authentication and security are to be maintained.

It should be noted that one stimulus may have several associated items • modified versions of items for accessibility purposes (e.g. braille, modified large print or versions for pupils with hearing impairment) <p>The solution must facilitate the onscreen display of an item (and other entities) in a viewable format.</p>
2.1.2	<p>Content Edit, Tracking & History The solution must assign a unique reference code (ID) to each question, item and stimulus as they are added to the bank. The ID must start with a subject letter (R for reading, M for mathematics and S for science). For example, reading item 1 = R000001</p> <p>The solution must facilitate the user's ability to edit items, stimulus material and mark schemes in the repository or upload new versions, whilst maintaining previous versions. This includes the assignment of a status to each item to track at which stage of the development process is the item.</p> <p>Users must be able to view, compare and print information about all previous versions relating to an ID (for example, the item history).</p> <p>The solution must facilitate the definition of relationships between items by specifying, for example, groups of items which belong together (for example, items which together form a question).</p>
2.1.3	<p>File Format The Solution must facilitate the storage of questions, items and mark schemes in (at a minimum) Microsoft Word and PDF format. The existing arrangements for the file formats in which stimuli can be stored are to be maintained.</p>
