All price are plus VAT at the current rate

Please note you cannot shorten the cables so it is important to get the right size.

The mat/cable systems are for floor warming and may not supply enough heat for the room depending on heat loss.

Devifast Fixing bands are attached to the insulation in parallel lines spaced 50cm apart, so the band length can be defined by the cable area multiplied by 2.

Notes: The garage room cables quoted above will cover approx 35.3 sq metres, the garage area less approx 3.6 sq metre for the benches off a total internal area of approx 39 sq metres. This will need to be run through a suitable rated contactor. The drying room cable quoted will cover approx 11.25 sq metres in an internal area of approx12 sq metres, this can be run through the Devireg Touch. Should any items be place over a heated area there will need to be a minimum of 50mm gap to allow air circulation to avoid hot spots. In addition to the above please place the conduit with the floor sensor supplied as close to the top of the screed to give more desirable tempeature reading. The cable CC distance when laying the cable is approx 100mm apart. This quote is valid until 31st December 2017.
