

## Renderlite Renovating Plaster

Generated on 06.11.2018

### Detailed description

An easy to apply internal plaster which is breathable, but will not allow the passage of salts through to the surface. It also has a U-value much lower than either sand/cement renders or gypsum based plasters. Ideal for any plastering situations and recommended for use following the installation of a damp proof course and onto the HEY'DI K11 tanking system.

Forms part of the Sovereign Damp Proofing System as covered by British Board of Agrément certification. Particularly useful in areas where condensation may be a problem, such as cold external walls, or after tanking basements.

### Product guidance - As Standard

#### Form:

Powder

#### Size:

25 Kg.

#### Coverage:

3.5 m<sup>2</sup> per 25 Kg at 10 mm.

#### Colour:

Grey.

### Product specification

#### Manufacturer
