Nothing in this clause shall exclude liability for fraud or fraudulent misrepresentation.
- 20.5 Any waiver or relaxation either partly, or wholly of any of the terms and conditions of the Agreement shall be valid only if it is communicated to the other Party in writing and expressly stated to be a waiver. A waiver of any right or remedy arising from a breach of contract shall not constitute a waiver of any right or remedy arising from any other breach of the Agreement.
- 20.6 The Agreement shall not constitute or imply any partnership, joint venture, agency, fiduciary relationship or other relationship between the Parties other than the contractual relationship expressly provided for in the Agreement. Neither Party shall have, nor represent that it has, any authority to make any commitments on the other Party's behalf.
- 20.7 Except as otherwise expressly provided by the Agreement, all remedies available to either Party for breach of the Agreement (whether under the Agreement, statute or common law) are cumulative and may be exercised concurrently or separately, and the exercise of one remedy shall not be deemed an election of such remedy to the exclusion of other remedies.

20.8 If any provision of the Agreement is prohibited by law or judged by a court to be unlawful, void or unenforceable, the provision shall, to the extent required, be severed from the Agreement and rendered ineffective as far as possible without modifying the remaining provisions of the Agreement, and shall not in any way affect any other circumstances of or the validity or enforcement of the Agreement.

## **21 Notices**

21.1 Any notice to be given under the Agreement shall be in writing and may be served by personal delivery, first class recorded or, subject to clause Error! Reference source not found., e-mail to the address of the relevant Party set out in the Award Letter, or such other address as that Party may from time to time notify to the other Party in accordance with this clause:

21.2 Notices served as above shall be deemed served on the Working Day of delivery provided delivery is before 5.00pm on a Working Day. Otherwise delivery shall be deemed to occur on the next Working Day. An email shall be deemed delivered when sent unless an error message is received.

21.3 Notices under clauses 15 (Force Majeure) and 16 (Termination) may be served by email only if the original notice is then sent to the recipient by personal delivery or recorded delivery in the manner set out in clause Error! Reference source not found..

## **Annex 1 – Specification and Charges**

### **Scope of Services**

Core will provide the following high-level outcomes for LI within this ROM;

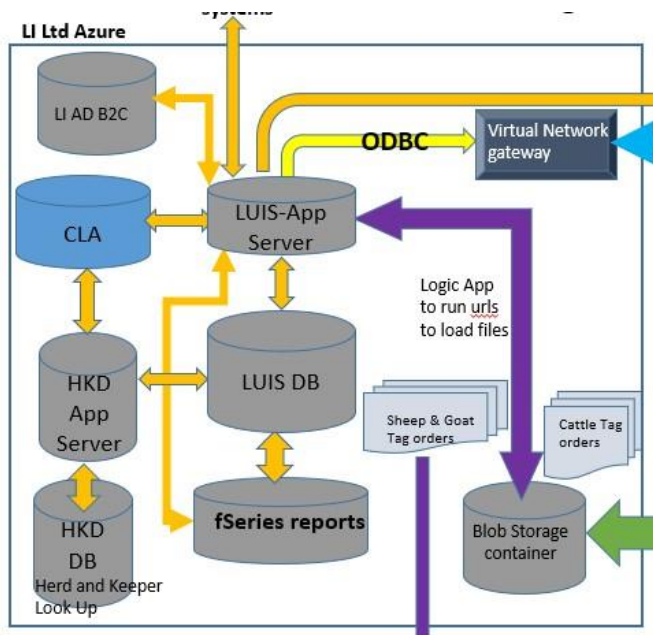

- Diligent discovery and design reviews of the current Test system and its components
- Workshops with LI to explore appropriate design specification, operational and security measures
- Design of Pre-Production infrastructure in LI Azure subscription
- Build of Pre-Production infrastructure in LI Azure subscription
- Commissioning support to Fibonacci
- Deployment of pre-production infrastructure for testing
- Support for UAT of pre-production environment
- Remediation of any issues from testing
- Provision of build documentation

### **Services in scope**

Core expects the following steps to apply to this project, based on the information that has been gathered so far from LI and Fibonacci.

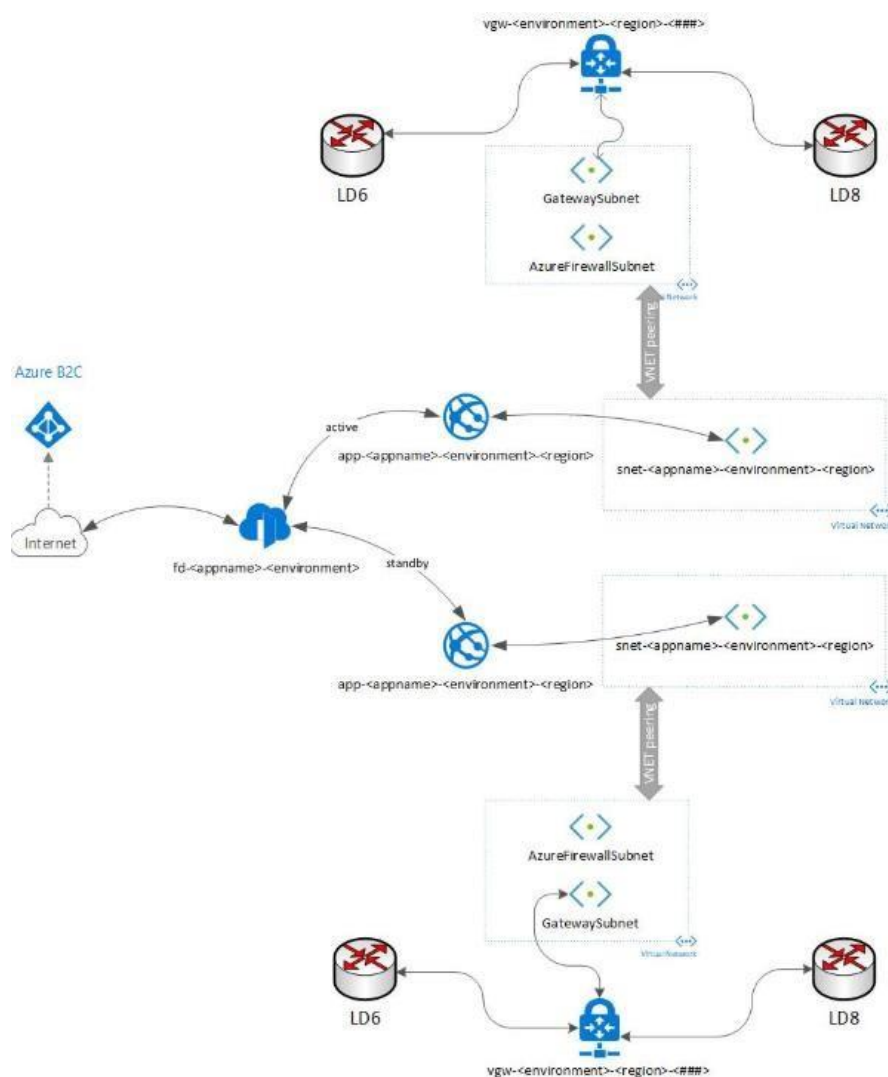

#### **Pre-Production Infrastructure in Azure**

Core will work with LI and Fibonacci to design and build a suitable Production infrastructure for the LUIS and HKD applications and their associated databases and storage, as current present in the Test/Dev environment and outlined in the diagram below;

Core will complete some discovery workshops with LI to ensure that we understand the operational requirements for LI and explore security hardening measures that we can apply architecturally to protect live service delivery and data.

Core will architect the solution based on the Microsoft Cloud Adoption Framework (CAF) principles to ensure that best practice is employed in all elements of the solution design. An example of how this design could look is included below;

## Configure Azure Access Policies

Based on the output of the discovery sessions, Core will design and deploy a set of appropriate conditional access policies in Azure. The detail of these will be determined in the discovery stage, but in essence they are likely to include device and user pre-requisites for access. Conditional access policies can be applied either just for privileged access, but a set of policies can also be designed for general users if appropriate.

## Networking

The output of the discovery sessions will be used to determine the correct networking design and deployment for the pre-production solution.

For the pre-production environment, we will look at how we harden the platform and provide some protection to upstream and downstream services by employing WAF and other firewalls where appropriate.

We will also complete the steps we took to connect the Test/Dev solution into the DEFRA Connectivity Hub infrastructure.

### **Commissioning Support for Fibonacci**

Once the primary solution elements are deployed, Core will provide support for Fibonacci while the application is commissioned on the platform. This may involve some small configuration changes to ensure that the application performs as expected.

### **Support for Testing**

Once Fibonacci have completed the commissioning of the application(s), Core will then provide support for LI while the upload of databases and testing processes are taking place. Again, we anticipate that there may need to be some small amendments to the overall solution to optimise the user experience.

### **Project Management**

Core will provide a Project Manager to interface with the Functional Lead at LI and Fibonacci to schedule resources and provide updates on progress throughout the project delivery. This is covered in more detail in Section 3 of this document.

### **Documentation**

Core will provide full documentation for the design and configuration for LI. This will enable you to have information on hand to support onward development or internal support of the solution without being beholden to Core.

## **Out of Scope**

The following is not an exhaustive list but highlights key elements that are out of scope of the service for clarity and comparison purposes;

- Application design, build, commissioning, support or licensing
- Hosting fees for the Azure infrastructure for Test/Dev or production. Our understanding is that these will be covered under the existing LI CSP subscription.
- Any remediation of databases or application components, the scope of this project is infrastructure only.
- Creation of a test plan or any testing related to the total solution
- Remediation of current Test/Dev environment, this is to be deprecated once the preproduction environment is deployed into an operational state.

## Project Plan

Customers who wish to engage Core to deliver a project will typically follow our defined process, which we have built to enable a consistent and manageable process that allows us to remove risk for both parties, and provide plenty of review points for both parties to check that our direction of travel is correct.

Our phased approach to a project of this nature follows this high-level approach:

Core run all of our Government projects using Prince II Agile methodology. A detailed breakdown of a typical project activity list is as follows;

### Discover

Core starts all projects with a discovery session, where the technical SME's from our team will work with the customer to make sure we fully understand required outcomes and discuss the multiple options that might be available to confirm the right design deliverables.

In this case, discovery will consist of the following elements;

- A technical review of the current platform and data to assess what changes need to be made to provide secure and controllable access to internal and external users.
- Core will use the outputs of this session to refine the current assumptions we have made to create estimates and ratify that we are able to provide the desired outcomes within the current environment and estimate.
- Core will then provide a playback session to the customer to review our approach to design and deployment, project timelines and costs and obtain approval from the customer to proceed to the design stage.

Once this stage is completed, Core will either re-issue this document as a formal statement of works, or will discuss with LI and variances between ROM estimates versus actual requirements and agree how we proceed.

## Design

Core will then commence the Design stage, where we will confirm the overall design of the solution and the individual components contained within it. For this project, this will contain the following steps;

- Technical Design Phase outlining any changes that may need to be made to the existing host platform, or if this is a green field opportunity, provide a design for the basic platform to meet the customers requirements, in line with NCSC recommended best practice.
- Security and Access Design Phase will cover how we can provide secure, rolebased access to each persona in the design. This will also include a recommended option, based on the outcome of Discovery, for external access by suppliers and contractors.
- Core will then provide a playback session to the customer to review our approach to deployment, project timelines and costs and obtain approval from the customer to proceed to the Deploy stage.

## Deploy

Core will then enter the Deploy stage, where we will build the solution components, test and run a Proof Of Concept to make sure that the solution works as expected. Following Proof of Concept, the solution will move to a full live deployment.

- Core will design and deliver a suitable method for internal and external access to the solution to start or participate in a business process. This is one area where there are a number of options to be discussed and explored, the recommendation on the right way can only really happen after the technical discovery is completed.
- Core will update all documentation to make sure that any changes are reflected, and then proceed to handover the working solution to LI.
- Once this stage has been completed, Core will run a project wash up session with LI and then with all parties agreement, close the project.

## **Estimated Project Timelines**

This is likely to be a rapid project given the current redline go live date for the Production environment of 1<sup>st</sup> February 2021. It is not currently clear how the production environment will be deployed.

Core estimate 46 resource days from start to finish to design, build and deploy this preproduction solution to a suitable state to go live. However, we will be utilising multiple resources to do this work, and in short order we expect the following high-level timelines to exist;

### **Approval to proceed by 1<sup>st</sup> December 2020**

Core suggest that if LI are happy with the content of this ROM that you provide us with a letter of intent to enable us to start the project formally.

### **Discovery (1<sup>st</sup> December – 8<sup>th</sup> December 2020)**

Core will complete independent discovery using access to the current Dev/Test environment, and complete some discovery workshops (circa half a day each) to ensure that we have fully captured security and operational requirements to inform the design process.

### **High Level Design (9<sup>th</sup> December – 11<sup>th</sup> December 2020)**

Core will generate a high-level design document for the proposed LUIS Infrastructure build and issue to LI for review. We will complete a review call with you to capture any areas of concern and design decisions that we need to take the design forward to the next stage.

### **Low Level Design (16<sup>th</sup> – 18<sup>th</sup> December 2020)**

Core will then complete a low-level design document which will go into greater depth on the configuration of the solution. Again, this will be issued to LI for review, we will complete a design review with you and capture any design decisions to inform the final build.

These design documents can be used by LI to inform the deployment of the Production Environment.

### **Infrastructure Build and Networking (21<sup>st</sup> December – 8<sup>th</sup> January 2021)**

Once all of the designs are approved, Core will begin the build process of the infrastructure. This will utilise multiple resources to set up the infrastructure and networking in line with the approved design.

### **Fibonacci Commissioning (11<sup>th</sup>-14<sup>th</sup> January 2021)**

Core will support Fibonacci with any configuration changes while they commission their application to the infrastructure. This timeline is predicated on suggested timings provided by Fibonacci.

### **Handover for testing (15<sup>th</sup> January 2021)**

The solution will now be ready for user testing in w/c 18<sup>th</sup> January 2021. We anticipate that this process will take 2-3 days.

### **Final Remediation (21<sup>st</sup> – 22<sup>nd</sup> January 2021)**

Core will then complete final remediations from user testing. We will confirm all is good during this week as soon as all remediation is complete.

### **Documentation updates and handover**

The documentation will be updated at each stage of the process, and the plan will be to handover the documentation to LI once the final remediations are completed.
