

Appendix 2b

3) Design - Value Engineering

a) Describe the principal opportunities for value engineering and your process for identification of and realisation of such opportunities, with reference to any processes and systems that will be employed. Complement your answer with reference to one recent example (from the last 5 years) of successful value engineering with details of the processes and systems utilised and how this experience and knowledge will add value to this project.

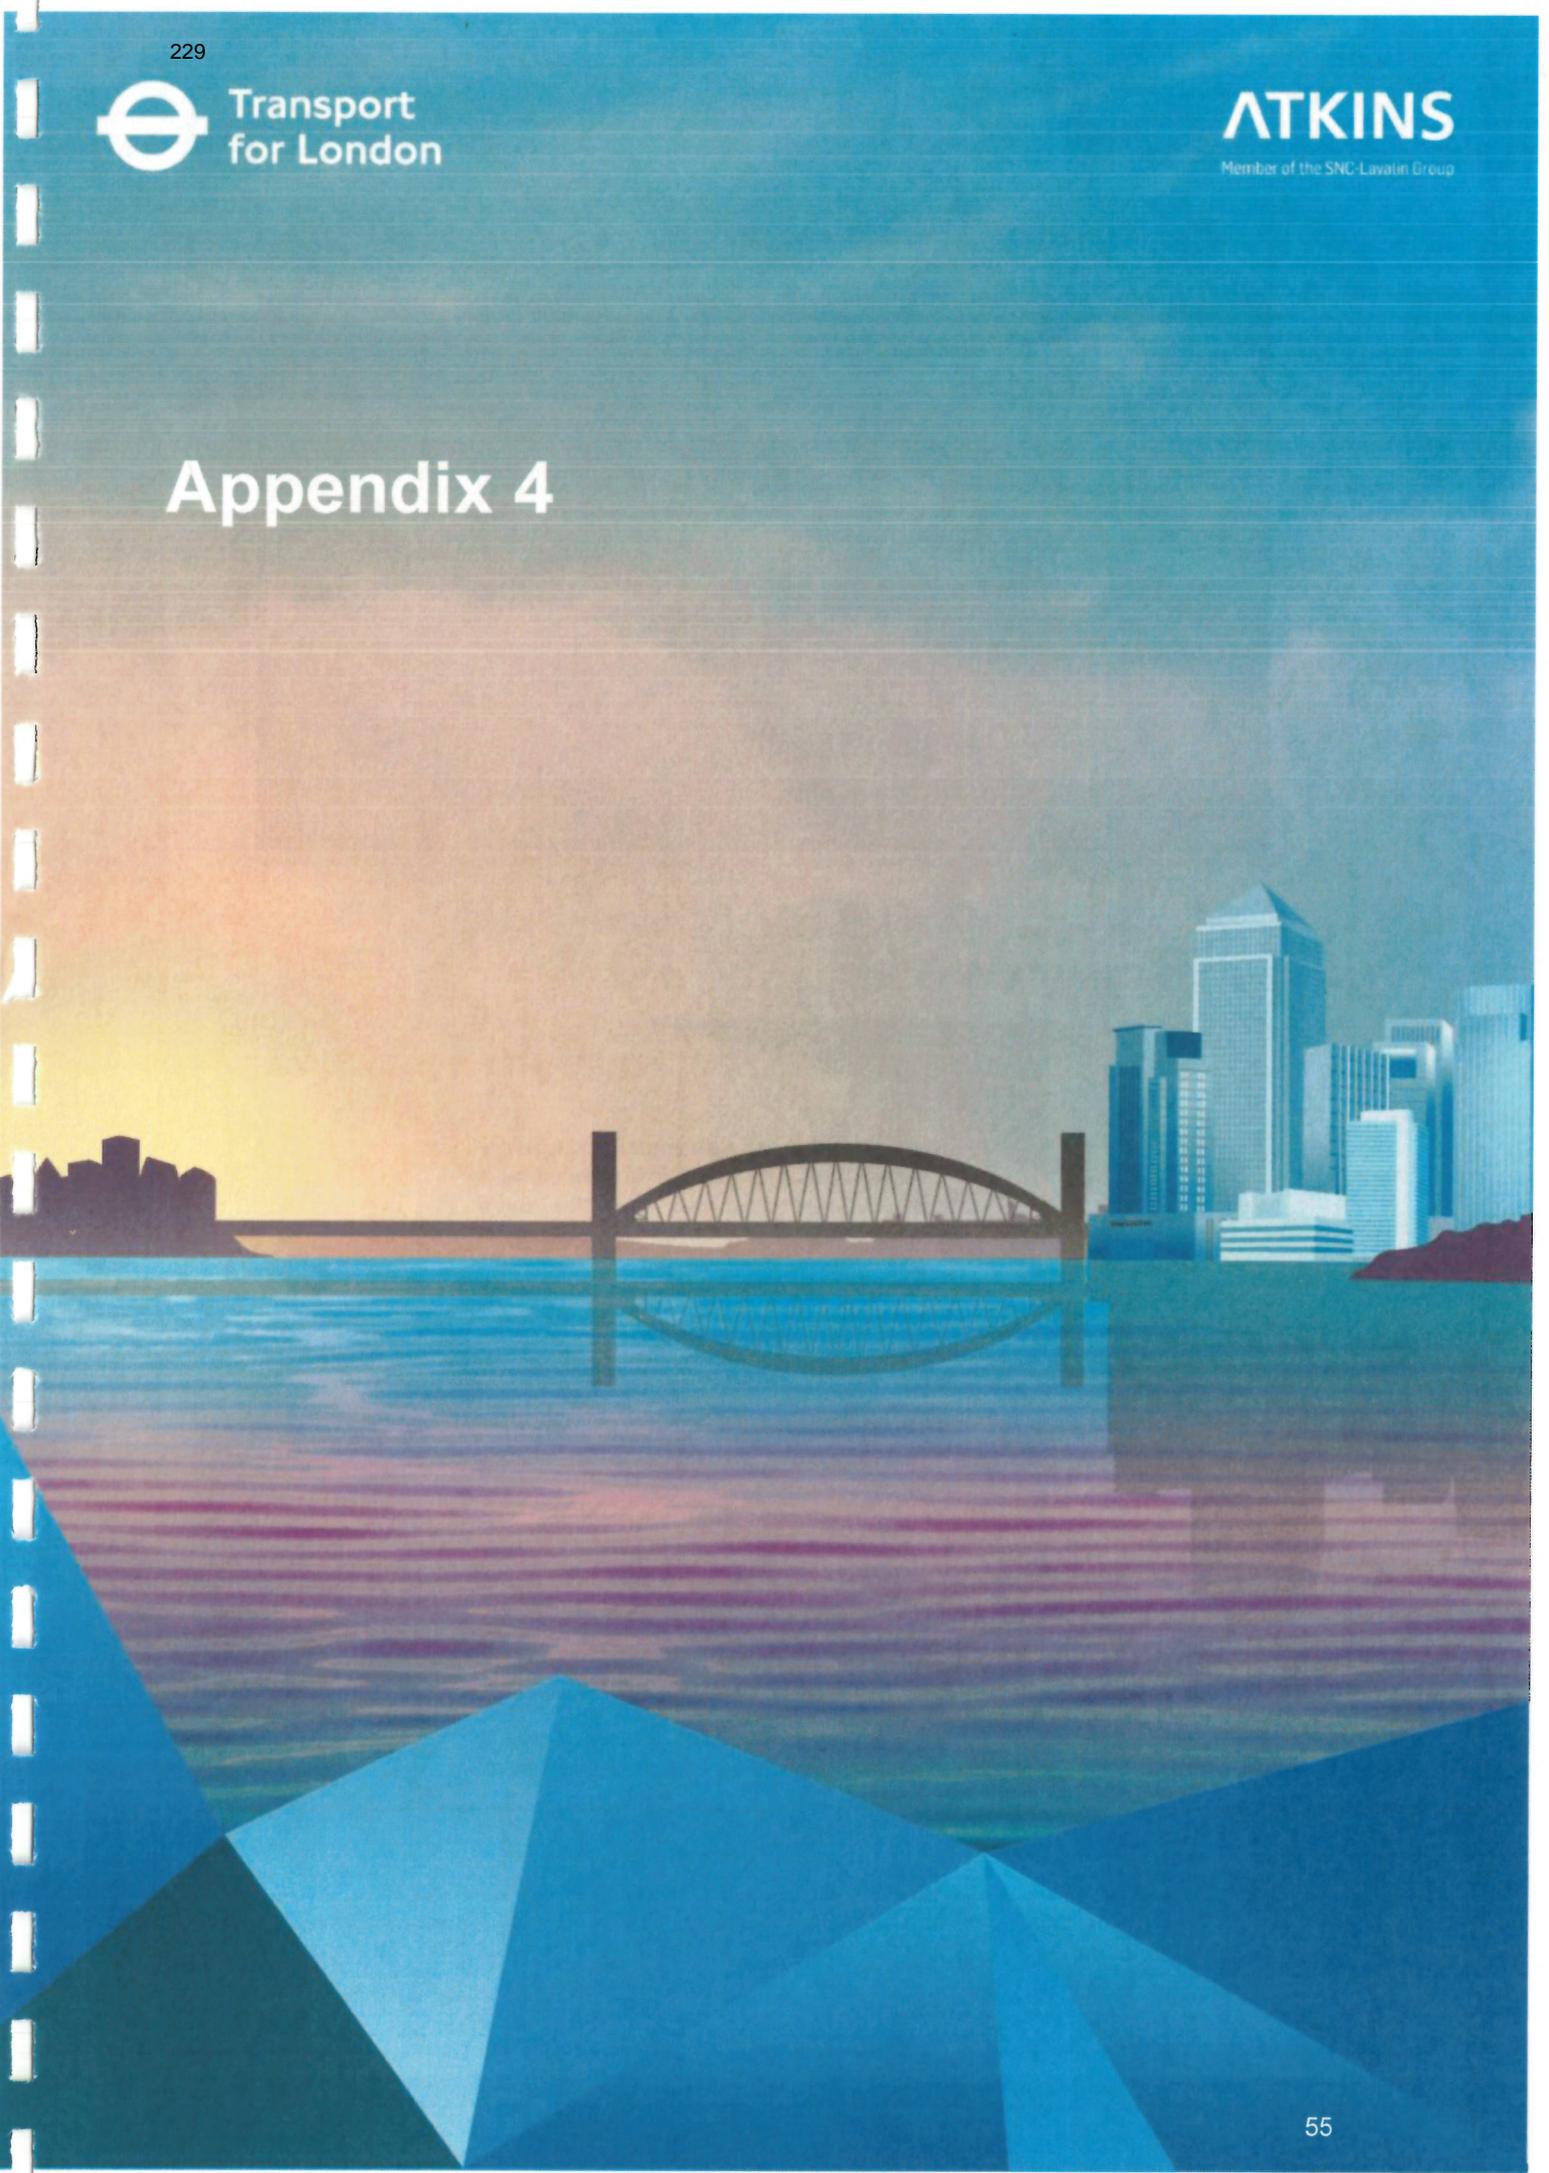

Appendix 3

4) Stakeholder Engagement and Management

Outline your previous experience of stakeholder engagement and management, particularly with reference to a Transport and Works Act Order. Describe how that experience will support stakeholder and objection management and result in successful project outcomes in relation to this commission.

Appendix 4

5) Design Constructability

a) Outline your approach to ensure constructability and maintainability of the final design in relation to the following: How the design will account for construction phasing, methodology and programming, with consideration of the construction constraints and best practice;

- How input from the construction sector to influence design and constructability will be achieved;
- How construction will be de-risked and what opportunities will be maximised for ease of build;
- Access for ongoing maintainability;
- Environmental aspects; and
- Operation of the completed bridge.

Appendix 5

6a) Team Structure and Resource Schedule
Demonstrate how you will ensure sufficient and suitably qualified resource is employed for the duration of the commission. a. Provide CVs for the core team, including the following: Architect, Landscape Architect, M&E Lead, Bridge Engineer, Estimator, Urban Designer, Design Manager, Project Manager and Expert Witness, who will be dedicated to the project including their resource grade (e.g. senior consultant). All CVs (maximum of 15) shall include individual's qualifications and relevant experience
