The Contracting Authority and or UK SBS acting as an agent on behalf of the Contracting Authority shall be responsible for determining in their absolute discretion whether any of the content of the Contract is exempt from disclosure in accordance with the provisions of FOIA.
- C2-3 Notwithstanding any other term of the Contract, the Supplier hereby consents to the Contracting Authority and or UK SBS acting as an agent on behalf of the Contracting Authority publishing the Contract in its entirety, (but with any information which is exempt from disclosure in accordance with the provisions of FOIA redacted) including from time to time agreed changes to the Contract, to the general public.

If any of the situations in **Error! Reference source not found.,Error! Reference source not found.** apply the Supplier consents to the Contract or sourcing documents being redacted by the Contracting Authority to the extent necessary to remove or obscure the relevant material and being published on the designated website subject to those redactions

In this entire clause the expression "sourcing documents" means the advertisement issued by UK SBS seeking expressions of interest, any pre-qualification questionnaire stage and the invitation to tender.

### **C3 Force Majeure**

### **C4 Corruption**

- C4-1 The Contracting Authority or UK SBS acting as an agent on behalf of the Contracting Authority shall be entitled to terminate the Contract immediately and to recover from the Supplier the amount of any loss resulting from such termination if the Supplier or a Supplier's Associate:

  - C4-1-2 has entered into the Contract if it has knowledge that, in connection with it, any money has been, or will be, paid to any person working for or engaged by the Contracting Authority, or UK SBS or any Public Body by or for the Supplier, or that an agreement has been reached to that effect, unless details of any such arrangement have been disclosed in writing to the Contracting Authority, or UK SBS before the Contract is entered into;
  - C4-1-3 breaches the provisions of the Prevention of Corruption Acts 1889 to 1916, or the Bribery Act 2010; or
  - C4-1-4 Gives any fee or reward the receipt of which is an offence under Section 117(2) of the Local Government Act 1972.
- C4-2 For the purposes of clause C4-1, "loss" shall include, but shall not be limited to:
- C4-2-1 The Contracting Authority's or UK SBS's costs in finding a replacement supplier;

Note: The Contracting Authority also reserves the right to amend or increase the frequency of reporting, as it deems necessary to secure assurance in order to comply with the Modern Slavery Act.

The Contracting Authority requires such interim assurances to ensure that the Supplier is compliant and is monitoring its supply chain, so as to meet the requirements of the Modern Slavery Act.

The Supplier shall complete and return the slavery and trafficking report to the contact named in the Contract on Commencement of the Contract.

The Supplier agrees that any financial burden associated with the completion and submission of this report and associated assistance at any time, shall be at the suppliers cost to do so and will not be reimbursable.

**C7-14 Changes in Costs Resulting from Changes to Government Legislation, Levies or Statutory Payments**

The Contracting Authority will reimburse during any term or extension (or, where such costs, awards or damages arise following termination/expiry) of this Agreement, any increases in the Supplier's cost of providing the Services by reason of any modification or alteration to the Government legislation duties or levies or other statutory payments (including but not limited to National Insurance and/or VAT and/or introduction of or amendment to working time minimum wages). Subject always to open book access to the Supplier's records and always after a period of due diligence carried out by the Contracting Authority, relevant and proportionate to the value concerned.

**C7-15 Taxation Obligations of the Supplier**

C7-15-1 The relationship between the Contracting Authority, UK SBS and the Supplier will be that of "independent contractor" which means that the Supplier is not an employee, worker, agent or partner of the Contracting Authority or UK SBS and the Supplier will not give the impression that they are.

C7-15-2 As this is not an employment Contract the Supplier will be fully responsible for all their own tax including any national insurance contributions arising from carrying out the Services.

C7-15-3 A request under Clause (3) above may specify the information which Supplier shall provide and the period within which that information must be provided.

C7-15-4 In the case of a request mentioned in Clause (3) above, the provision of inadequate information or a failure to provide the information within the requested period, during any term or extension, may result in the Contracting Authority terminating the contract.

C7-15-5 Any obligation by Supplier to comply with Clause (1) and (2) shall survive any extension, completion or termination and Supplier obligations to Indemnify the Contracting Authority shall survive without limitation and until such time as any of these obligations are complied with.

## Annex A - Specification

**1. Background**

Since 2009, new build combustion power plants sized over 300MW in England and Wales have been required to demonstrate they could retrofit carbon capture and storage (CCS) in order to decarbonise. See [here](#) for further information on the 2009 requirements. This policy has been known to date as 'Carbon Capture Readiness'.

In light of the Government's net zero ambition, we are expanding the 2009 requirements. As part of the expansion, we are renaming the policy to 'Decarbonisation Readiness'. A call for evidence on the expansion was held earlier this year. Full details of the call for evidence can be found [here](#). A summary of the proposals in the call for evidence is provided below.

- Removing the 300 MW minimum capacity threshold at which the requirements currently apply.
- Including refurbishing plants in the requirements, as well as some technologies which were previously excluded; for example, heat generation, biomass, energy from waste (EfW) and combined heat and power (CHP).
- Introducing the option to comply with the requirements through hydrogen conversion, in addition to the retrofitting of CCS.
- Moving the requirements from the planning permission process to the environmental permitting process.

In 2009, [detailed guidance](#) was produced to support industry and BEIS in assessing the Carbon Capture Readiness requirements. This guidance will need to be updated, as plants below 300MW and new plant types (e.g. combined heat and power, energy from waste and biomass) may now be assessed for carbon capture readiness. It will also need to be expanded to cover hydrogen readiness.

In order to do so, we will need to update and expand the underpinning evidence base that was used to develop the guidance. We are therefore commissioning two technical studies.

The requirements apply in both England and Wales, therefore Welsh Government are key stakeholders to the project and will be involved in the project meetings with BEIS. The Environment Agency and Natural Resources Wales will be developing the guidance for industry based on the evidence gathered in these studies, and so they are also important stakeholders and will be involved closely in the project.

**2. Aims and Objectives of the Project - Lot 1 – Hydrogen readiness**

**Aim: to create an evidence base which can be used to define the requirements for demonstrating hydrogen readiness and inform guidance.**

Hydrogen readiness will likely be demonstrated through five different assessments, listed below.

1. that sufficient space is available on or near the site to accommodate any equipment necessary to facilitate hydrogen conversion;
2. that it will be technically feasible to convert the site to 100% hydrogen-firing.
3. that the site's location enables the transport of hydrogen to the site and/or that

- hydrogen can be produced and potentially stored at the site; and
4. that it is likely to be economically feasible, within the power station's lifetime, to convert to hydrogen combustion.
  5. that the plant will be technically capable of firing a blend of hydrogen on the day it is put into operation.

Each of these assessments will require supporting evidence, therefore we have linked one objective to each of the five assessments, as set out below.

Objective 1 – linked to assessment 1

To identify the equipment which a hydrogen combustion plant will require that differs from a typical combustion plant, and the spatial footprint associated with each piece of equipment. This may need to be split out based on the combustion technology (e.g. engine, turbine, boiler, CHP) and the fuel (e.g. gaseous fuel, liquid fuel, biomass or waste).

Below we have provided a non-exhaustive list containing some examples of the additional space requirements which may need to be considered for a hydrogen combustion plant:

- Hydrogen storage equipment
- Increased pipeline infrastructure
- Increased road traffic / vehicle access
- Modifications to the combustion site to enable hydrogen combustion
- Potential safety requirements resulting from the use of hydrogen e.g. increased separation between pipelines and buildings.

Objective 2 - linked to assessment 2

To produce a checklist of the technical changes required to convert a plant to hydrogen combustion. This may need to be split out based on the combustion technology (e.g. engine, turbine, boiler, CHP) and the fuel (e.g. gaseous fuel, liquid fuel, biomass or waste).

Below we have provided a non-exhaustive list containing some examples of the technical challenges which may need to be addressed for a hydrogen combustion plant:

- Hydrogen fuels have the potential to produce significant emissions of oxides of nitrogen, requiring additional modifications and / or abatement technology.
- Depending on the amount of hydrogen in the fuel supply, the resultant combustion may burn hotter than other fuels. Therefore, the materials of construction used for equipment associated with combustion may need to upgrade to handle the higher temperatures.
- Hydrogen combustion may require amendments to the operational routines or combustion systems to ensure flame stability.
- Hydrogen may need higher pressures than natural gas or other fuels due to greater volume flow.
- Hydrogen molecules can be more prone to leakage than other gaseous fuels. Therefore, additional safety and measurement process may be needed.
- Hydrogen has the potential to embrittle some material more than other gaseous fuels do, therefore piping may need to be modified or managed.

- The flow rate and air fuel ratio of the combustion process may need to be altered.
- Redesign of the combustion controls and software may be needed.
- The low lubricity and viscosity of hydrogen can cause additional problems in fuel systems.
- Additional safety measures may be needed for hydrogen combustion, compared to natural gas.
- Hydrogen combustion may lead to greater amounts of water vapour in flue gases, creating knock-on issues which require management e.g. more rapid corrosion of exhaust equipment.
- There may be increased safety requirements due to the use of hydrogen.

### Objective 3 - linked to assessment 3

This bulk of the evidence base for this assessment, i.e. the likely location of a hydrogen network, is dependent on policy and therefore does not require research. But we are interested in the alternative options for hydrogen fuel access, beyond connection to a hydrogen network, to understand whether any of these options could be viable in the future.

Therefore the objective is to research the alternatives to pipeline hydrogen fuel access e.g. on-site production, on-site storage, transport by road etc. and to determine their potential for the future. This may need to be split out based on the combustion technology (e.g. engine, turbine, boiler, CHP).

### Objective 4 - linked to assessment 4

To make estimates of the additional capital costs (including opportunity costs - e.g. outages whilst retrofitting) and the additional operational costs (e.g. plant machinery, increased costs of leakage monitoring, NOx abatement equipment, increased safety requirements) of converting the a plant to hydrogen firing.

The costs may need to be split out based on the combustion technology (e.g. engine, turbine, boiler, CHP) and the fuel (e.g. gaseous fuel, liquid fuel, biomass or waste). They should also be provided in figures of £/MW so that they can be scaled. Or disaggregated into size categories of plants e.g. 0-50MW, 50-300MW, >300MW etc.

### Objective 5 - linked to assessment 5

The proportion of hydrogen blend required as part of this assessment will vary depending on the date of construction. We need to gather evidence to set the trajectory.

Therefore, the objective is to estimate the dates by which combustion technologies that can fire increasing blends of H<sub>2</sub> (e.g. 20%, 50%, 100%) will be available from manufacturers. This may need to be split out based on the combustion technology (engine, turbine, boiler, CHP or heat generation).

## **3. Suggested Methodology**

We anticipate that both literature reviews and qualitative research methods (interviews, workshops, focus groups etc.) will be needed in order to gather all of the evidence required to support the assessments. Suppliers are free to choose the methodology which they think is most appropriate for the task. Below is an indicative outline of one possible methodology which could be used.

**Scoping** - Identification of literature sources, stakeholders for interview and qualitative analysis methods.

**Literature review** - A thorough literature review of, for example, academic journal articles and references documents.

**Qualitative data gathering** - Interviews / workshops / focus groups held with stakeholders to fill the evidence gaps in the literature review.

**Analysis** - Feedback from the stakeholders analysed and synthesised with the literature from the literature review.

**Write up** - The findings of the studies written up into concise and clear reports.

#### 4. Deliverables

Bidders should note that BEIS will own the intellectual property rights of any and all intermediate products, including final deliverables, and in particular including presentation slide packs, reports and data.

In terms of deliverables, we expect the findings of each study to be summarised into a single report that will be submitted to BEIS for review in draft format halfway through the project, and as a final version at the end of the project. The findings should also be presented to BEIS at the interim and final meetings.

Below we have provided an indicative summary of what the report should contain at a minimum.

##### Lot 1 – Hydrogen readiness – indicative report contents

- Tables demonstrating the spatial footprint of each additional component of a hydrogen firing site.
- Checklists which can be used to assess whether it would be technically feasible for a site to convert to 100% hydrogen.
- A brief report on the feasibility of other forms of hydrogen fuel access.
- Tables containing estimates of the costs of converting a plant to hydrogen firing.
- A brief report estimating when combustion equipment capable of firing increasing proportions of hydrogen will be available on the market.

##### Meetings

For both lots, we expect regular catch-ups to be held between the BEIS project manager, Welsh Government, the Environment Agency, Natural Resources Wales and the contractor. We also expect there to be three formal meetings held for each lot:

1. An inception meeting at the start of the project, to agree the methodology and scope
2. An interim progress meeting halfway through to discuss the interim report
3. A final meeting to discuss the final report and conclusions

The supplier should be accessible throughout the duration of the contract.

##### Quality Assurance

Bidders must set out their approach to quality assurance (QA) in their response to this ITT with a QA plan.

Sign-off for quality assurance must be done by someone of sufficient seniority within the contractor organisation to be able to take responsibility for the work done. Acceptance of the work by BEIS will take this into consideration. BEIS reserves the right to refuse to sign off outputs which do not meet the required standard specified in this invitation to tender and/or the contractor's QA plan. QA should cover all aspects of the project undertaken by the contractors, including data collection, data analysis and reporting.

To demonstrate an effective process to produce high quality reporting, the contractor/s must ensure that quality assurance is done by individuals who were not directly involved in that particular research, analysis, or reporting process.

Bidders should note that BEIS may appoint its own peer reviewer(s) to QA publishable outputs. Consideration should be given to how the external peer reviewer(s) will be included in the QA process.

Where complex or innovative methods are proposed, bidders should specify how additional quality assurance will be provided. Where necessary, this should include the use of external experts. A BEIS-appointed peer reviewer will not be expected to provide detailed quality assurance as their role will be focused on higher level peer review.

Outputs will be subject to BEIS internal approvals, and the more substantive the output the longer the approval time required.

The successful bidder will be responsible for any work supplied by sub-contractors. For primary research, contractors should be willing to facilitate BEIS research staff attending interviews as part of the quality assurance process if appropriate.

Other useful sources of guidance and advice that will help bids and the resulting work be of the highest quality include:

- The **BEIS Monitoring and Evaluation Framework**, which sets out BEIS's ambitions and standards for monitoring and evaluation
- The **Government Social Research Code**, in particular those that relate to GSR Products
- **Quality in Qualitative Research: A Framework for assessing research evidence** provides a Framework for appraising the quality of qualitative research

### **Working Arrangements**

The successful contractor will be expected to identify one named point of contact through whom all enquiries can be filtered. A BEIS project manager will be assigned to the project and will be the central point of contact.

Where a consortium or sub-contractors are in place, BEIS expect that they are included in relevant meetings, workshops and review points to ensure their full engagement in the project. All contractors and sub-contractors are responsible for the delivery of outputs to the appropriate time and quality. It is expected that the lead contractor takes an active role in oversight of all workstreams and bears the overall responsibility for the delivery of the evaluation activities and outputs.

Bids should assume that BEIS take an active role in review and quality assurance of

research materials, analysis and outputs, beyond external peer review. It should be expected that research materials and outputs go through at least three iterations (i.e. two rounds of comments from BEIS). BEIS will expect more complex research instruments to be tested before going into the field fully. Additional amendments may be required for published outputs.

We expect the appointment offer to be confirmed in January 2022. Note that bidders must be available to attend an inception meeting in January 2022.

We envisage the need for close interaction between the BEIS Project Manager and contractor throughout the process, to ensure that emerging issues are dealt with promptly and that BEIS fully understand the assumptions and approach taken. Bidders should assume that engagement with BEIS will include fortnightly project management phone calls, weekly progress updates, and any ad hoc meetings as required to design and deliver the project. Throughout the project, BEIS will review and sign off all final data collection instruments and analytical approaches (including key assumptions, surveys and interview questions) before they can be used. BEIS will also review and sign off all outputs.

### **Skills and expertise**

BEIS require you to demonstrate that you have the necessary expertise and capabilities to undertake the project. Your tender response should include a summary of the project team's skills and capabilities, both in terms of evaluation skills and energy policy expertise.

### **Challenges**

There may be a number of challenges in conducting this evaluation; some are detailed in the following section. Bidders must explain how these and any other challenges will be addressed through the project's design and delivery. Bidders must also set out any support that they will need from BEIS in delivering the aims and objectives of the studies.

#### *Timing of outputs*

Bidders should consider how they can deliver outputs to the proposed timetable. Bidders are welcome to propose innovative methods and outline a delivery plan which splits the required activities in stages to meet the requirement.

#### *Engaging stakeholders*

Bidders should explain how best to maximise the input from stakeholders

### **Ethics**

All applicants will need to identify and propose arrangements for initial scrutiny and on-going monitoring of ethical issues. The appropriate handling of ethical issues is part of the tender assessment exercise and proposals will be evaluated on this as part of the 'consideration of challenges' criterion.

We expect contractors to adhere to the following Government Social Research (GSR) Principles:

- Research should have a clear user need and public benefit
- Research should be based on sound research methods and protect against bias in the interpretation of findings
- Research should adhere to data protection regulations and the secure handling of

personal data

- Participation in research should be based on specific and informed consent
- Research should enable participation of the groups it seeks to represent
- Research should be conducted in a manner that minimises personal and social harm

### **Data security**

No security clearance will be needed by the suppliers.

### **Price and payments**

The maximum budget for this project is £40,000.00 excluding VAT for Lot 1. Cost will be a criterion against which bids will be assessed. The budget must be spent before the end of financial year 2021/22

Contractors should provide a full and detailed breakdown of costs. This should include staff (and day rate) allocated to specific tasks.

In submitting full tenders, suppliers confirm in writing that the price offered will be held for a minimum of 60 calendar days from the date of submission. Any payment conditions applicable to the prime contractor must also be replicated with sub-contractors.

The Department aims to pay all correctly submitted invoices as soon as possible, within 30 days from the date of receipt, in line with standard terms and conditions of contract.

### **Timetable**

Contractors must demonstrate that they can meet the following provisional timetable for the delivery of the evaluation:

<b>Timeline</b>	<b>Details</b>
2022 January	<ul style="list-style-type: none"> <li>• Project scoping and planning completed</li> <li>• Inception meeting held</li> </ul>

### **Terms and Conditions**

Bidders are to note that any requested modifications to the Contracting Authority Terms and Conditions on the grounds of statutory and legal matters only, shall be raised as a formal clarification during the permitted clarification period.
