SECTION 2 – STATEMENT OF REQUIREMENTS

1.0	Title
	Content providers for Modules under the Sustainable Infrastructure Course

1.1	Background
	<p>ASEAN is at the heart of the UK's Integrated Review and our Tilt to the Indo Pacific outlook.</p> <p>Supporting the Masterplan on ASEAN Connectivity (MPAC 2025) through collaboration on Sustainable Infrastructure is a key HMG priority in the region.</p> <p>The UK and ASEAN have been collaborating closely on Sustainable Infrastructure; exchanging broad ideas on project planning, preparation and appraisal, funding and procurement, and establishing sustainability in practice.</p> <p>Building on this momentum, the UK will be creating a modular course for sharing best practice and lesson learnt on Sustainable Infrastructure. The course aims to equip ASEAN policy makers and practitioners with the skills, tools, frameworks and processing necessary to implement sustainability in practice. The course will:</p> <ul style="list-style-type: none">• Support the <i>Framework for Improving ASEAN Infrastructure Productivity</i> through exchanging knowledge on upstream infrastructure management. Share best practise on developing and implementing robust, merit-based frameworks for project screening, planning and appraisal; including assessing value for money, commercial viability, financial affordability and operational deliverability.• Support sustainability in practice, through procurement activities and approaches including preserving ecological value of the site and optimising existing infrastructure projects and assets through future proofing and repurposing. <p>The curriculum, designed by the Authority, will cover 6 themes</p> <ol style="list-style-type: none">1: Introduction to Sustainability & Infrastructure Planning2: Frameworks3: Project Planning4: Project Preparation5: Sustainable Project Financing6: Contracting <p>The course will involve policy leads and practitioners from across ASEAN. All the content will be developed in close coordination with the ASEAN Secretariat and key ASEAN Working Groups and Sectoral bodies.</p>

1.2	Summary
	<p>This RfP is to procure Content Providers who will design and develop Modules for the Sustainable Infrastructure Course. Organisations will need to bid for individual Modules. Each organisation is allowed to bid for a maximum of 6 Modules (no minimum). Content providers are free to partner with supporting organisations to deliver the respective Modules. The Authority reserves the right to make the final decision on selection of content providers. Detailed requirements are provided in the following section.</p> <p><u>TO NOTE:</u> The Authority is also conducting a separate procurement to hire a Delivery Partner for this course. The Delivery Partner will work with the Content Providers to collate and curate the different Modules, ensuring the content comes together to form one coherent Course.</p> <p>We expect the Course design and curation to be completed by March 2022.</p>

1.3 Requirement

* The Authority is keen to encourage inputs from a wide cross section of industry, therefore **Content Providers are limited to bid (no minimum applies) for a maximum of 6 Modules.**

* If you think there are any gaps in our Curriculum, **you can pitch for additional Modules.** Please do so by identifying the Module in and provide content summary in line with the requirements below. Please note, **additional Modules will count toward the maximum limit of 6 Modules.** All Modules are of equal weightage so you will not be judged on which Modules you bid for.

For each awarded Module, the Content Providers would be expected to:

- Identify and map out the estimated duration of each Module, including time needed for additional reading.
- Design course content for the awarded Modules in line with the steers and guidance issued by the Authority and the Delivery Partner;
- Provide all documents including audio/video recordings related to the course that can be shared with participants;
- Ensure the content is suitable for virtual delivery. To this end, demonstrate thought leadership and innovation in its presentation.
- Work with the Delivery Partner to format content to the required branding;
- Ensure the content is case-studies driven with clear linkages to real-world scenarios; allowing students to apply learnings in their day-to-day work. To this end, the Content Providers will be expected to work with the Delivery Partner to build a catalogue of Case Studies;
- Create evaluation methodology and the necessary platform to test participant's learning;

The list of Modules below is not an exhaustive - we encourage content providers to identify and quote for any missing content/Modules. You are encouraged to structure the flow of the Modules in an order, which you believe works best, and group the Modules against the Themes listed in the table.

You are also permitted to combine modules and change titles to reflect your vision. As the course is expected to be delivered virtually at a later date, please include estimated duration a participant needs to spend for each of the modules you will be bidding.

Theme	Module	Description	Bidding (Yes/No)	Duration (No. of Hours)
Introduction to Sustainability & Infrastructure Planning	Why Are You Here? Overview	Big picture overview on the role of infrastructure, themes, the challenge facing ASEAN and its Member States, the need for Sustainable development etc.		
	Lighthouse Vision Masterplan	Masterplanning – the combination of multi-disciplinary approach, design, social and economic impact.		
	Decarbonisation	Introduction to the concepts of how infrastructure development can be decarbonised: from design, through to materials and alternatives; linking into the wider drivers of Green Finance and Legislation.		
	Future Proofing	Deep dive into the structured planning of long term, 100+ year assets such that they <ul style="list-style-type: none">• Have built-in flexibility to allow for repurposing and adapted use;• Are in avoidance of obsolescence and will be suitable for meeting the economic and societal needs of the future;		

		<ul style="list-style-type: none"> Are climate-resilient and environmentally sustainable. <p>To this end, this Module should draw on global trends in infrastructure development and ensure ASEAN governments are equipped with the knowledge necessary to make futuristic decision.</p>		
	Sustainable architecture	Well-rounded overview into the core principles for designing sustainable built environment and infrastructure assets. This Module should focus on the ASEAN Member States can maximise their social value whilst also preserving the maximum environmental value. In particular, the Module should cover practical steps that policymakers and practitioners can take to enable sustainable solutions for infrastructure at an early stage.		
Frameworks	Regulatory, Legal, Institutional Frameworks	Broad brush overview into the core Regulatory, Legal and Institutional Frameworks needed for effective Infrastructure planning. This Module should cover different approaches to setting up the right systems, drawing on global and UK best-practise, offering practical solutions on how ASEAN Member States can further enhance their internal structures and processes. It should also focus on the role of independent commissions in assessing long-term infrastructure needs.		
	Digitalisation	Spotlight on the role and impact of Digitalisation in driving infrastructure productivity and transparency across the supply chain. This Module should cover the principles of how to best prepare, both in the public and private sector, for a shift towards digitally-delivered infrastructure - including building data structures and training schemes for standard software's. The Module should draw on real-world example of integrating digitalisation into established processes.		
Project Planning	Climate Adaptation & Resilience	New and existing infrastructure will need to be able to withstand the significant physical changes that will occur as a result of climate change. ASEAN is especially exposed to these changes. Thus, this Module is aimed at offering practical solutions to ASEAN Member States for efficient infrastructure planning and adapting to the rising risks of climate change- from traditional defences, to nature-based solutions, to considering alternative approaches to asset development that minimise future risks. The Module should include an overview on the short, medium and long impact of climate change on the infrastructure landscapes with clear links of how this affect the short and long-term planning and ambitions of ASEAN and its Member States. In particular, it should focus on the unique challenges posed by climate change to different asset types and offer practical solutions, drawing on global and UK best practice, to adapt to these		

		challenges in the design, planning and implementation phases respectively.		
	Circular Economy	Spotlight on the role and relevance of Circular Economy within the infrastructure environment and how planning for reuse, repurposing and recycling allows for extended project life-cycle. This module should draw on real-world examples and global practice.		
Project Preparation	5 Case Model Foundation (Module content will be provided by the Authority – DO NOT BID for this module)	Deep dive into the UK's 5 Case Model - a tried-and-tested framework to prepare business cases for infrastructure projects. This module is aimed at equipping policymakers and practitioners with the skills necessary to shape early stage infrastructure planning in line with national priorities, budget constraints, societal, economic and environmental ambitions etc. The Module should provide a detailed run-through of each element of the 5 Case Model, with a particular focus on Cost and Benefit Analysis. This Module will be internationally-recognised APMG accreditation in the 5 Case Model	-	-
	Green Book Framework Cost Benefit Analysis	Building on the 5 Case Model Module, this deep dive will explore in further detail the techniques that can be used to quantitatively appraise the effects of infrastructure projects. It will particularly focus on quantifying and valuing positive and negative environmental impacts – for example using the supplementary Green Book guidance on the valuation of energy use and greenhouse gas emissions.		
	Asset Management and Routemap	Project Development Routemap is the UK government's international support tool for novel or complex major projects - providing an understanding of the capabilities needed to set up for success – from procurement through to asset management. This Module will introduce the Routemap methodology and help practitioners think through how to apply Routemap principles to their own projects.		
	CP3P (Certified Public-private Partnerships Professional) Foundation Course	This Module distils global best practices on PPP project management, and participants will come away with an internationally-recognised APMG accreditation . The CP3P Foundation certification is aimed at individuals who are involved in PPP projects and require a working knowledge of the key principles of financing PPP projects. The		

		Foundation exam tests whether a candidate has sufficient knowledge and understanding of the PPP Guide to act as an informed team member of a PPP finance project.		
Sustainable Project Financing	Green Financing	This Module will help practitioners navigate the increasingly prominent world of sustainable finance. Under the broad banner of 'sustainable finance', private investors seek bankable projects that contribute to sustainability-linked outcomes, in addition to investment returns. At the project preparation stage, governments can undertake valuable work that can give confidence in both the bankability and sustainability of infrastructure projects. Practitioners will learn about different certification schemes for sustainable finance, and how their projects could be eligible for this.		
	Lenders' Perspective	Spotlight on the impact of legislation and infrastructure policy making on Lenders; how these drive the behaviours of commercial lenders; and the impact they have on funding requirements. In particular, this Module should flesh out how Lenders evaluate and assess investment opportunities, the criteria they use etc., and offer suggestion of best practise that Governments should adopt. Outline the impact on Net Zero targets which provides a lens through which projects are considered and evaluated.		
	Land Value Capture	Spotlight on the use of land value capture as a method for funding infrastructure development. This Module should outline the advantages, disadvantages and common difficulties of practically implementing an effective land value capture regime.		
	Public-Private Partnership	A deep dive into the role of PPP in bringing projects to market, and an overview of the practice and examples.		
Contracting	Green Procurement	A spotlight on how the rise of Green Finance will drive requirements for Green Procurement. The Module should draw on the global and UK best practise for green procurement, including a deep dive into the frameworks, structures and evaluation criteria needed to execute this. The Module should offer practical recommendations on how these international practices can be implemented in ASEAN.		
	New Engineering Contract	An overview of the rise of The New Engineering Contract (NEC), the ambition to improve productivity and remove conflict. This Module will introduce participants to the NEC suite of documents and how they can be used for projects in the region. The Module should compare with standard form contracts and alternatives,		

		examining best practice examples of projects using NEC.		
	PAS (Publicly Available Specification) 2080 standard	PAS 2080 is a global standard for managing infrastructure carbon. The framework looks at the whole value chain, aiming to reduce carbon and reduce cost through more intelligent design, construction and use. PAS 2080 also ensures carbon is consistently and transparently quantified at key points in infrastructure delivery, which promotes sharing of data along the value chain. This Module will help attendees understand whether PAS 2080 can be implemented on their projects, and broader principles of carbon management useful for all infrastructure projects.		
	'Green' specifications	Building on Green Procurement, the Module should seek to identify toolkit for assessing how and where projects can “go-green”. To this end, the Module should also outline the risks of not specifying green (i.e.: carbon creep backs), and the impact this has on Net Zero targets. Will explore green substitutes, which can be used and specified.

Good	4	Satisfies the requirement with additional benefits. Above average demonstration by the Tenderer of the understanding and evidence in their ability/proposed methodology to deliver a solution for the required supplies/services. Response identifies factors that will offer potential added value, with evidence to support the response.
Acceptable	3	Satisfies the requirement. Demonstration by the Tenderer of the understanding and evidence in their ability/proposed methodology to deliver a solution for the required supplies/services.
Minor Reservations	2	Satisfies the requirement with minor reservations. Some minor reservations of the Tenderer's understanding and proposed methodology, with limited evidence to support the response. Tenderer has accepted FCDO standard terms and conditions of contract.
Serious Reservations	1	Satisfies the requirement with major reservations. Major reservations of the Tenderer's understanding and proposed methodology, with little or no evidence to support the response.
Unacceptable	0	Does not meet the requirement. Does not comply and/or insufficient information provided to demonstrate that the Tenderer has the understanding or suitable methodology, with little or no evidence to support the response. Tenderer has rejected FCDO standard terms and conditions of contract.
Price / Commercial	Score awarded on inverse percentage difference from most financially attractive offer to the Authority	

Prices will be benchmarked and scores awarded based on the lowest compliant bid. The most financially attractive offer to the Foreign & Commonwealth Office following detailed analysis will receive the maximum score available with the remaining bids awarded scores based upon an inverse percentage of the difference in price.

[example: Bid A = £9.5K = 175 pts, Bid B = £10K = 166.25pts (£9.5K/£10k x 175)]. The weighting will then be applied to the scores.]
