Schedule 1 - Services

- Workshop to create a backlog of business hypothesis and prioritise to select the one required to be taken forward into the proof-of-value stage.
- Execute proof-of-value, as per the plan, by bringing together relevant Highways England data sets, generating analytical features and applying data science algorithms to develop a

predictive model

- Document in PowerPoint format the findings at the end of each sprint, which could be used to inform decision making for future plans and business case
- Delivery of a Proof of concept solution that if successful has the potential to be scaled up and inform the design and roll out activity to enable it to be deployed more widely.
- Identify the potential for advanced analytics methods including machine learning to enable more efficient and effective processes for planning, estimation and analysis.
- Analyse sample data sets provided by HE that are not part of the proof-of-value to determine how they would map into the model in future phases of development (time-boxed to the duration of the plan) EY will not download HE data onto EY laptops; the data will remain in the HE provided Azure cloud.
- HE should not use the output of the proof-of-value model to make business decisions.
- Subject to agreement during the Question Workshop the PoC will aim to demonstrate that some or all of the following are possible:
 - Automatic identification of unit rates that are well outside historic norms requiring manual review
 - Processing of large volumes of raw data that will be automatically incorporated into the master dataset
 - Ability to provide more meaningful intelligence at a granular level e.g. instead of just providing a rate for 'signs' it will break this down to a sub-level e.g. electronic, simple signs etc
 - Ability to produce outputs quickly with a direct link back to the data source, instead of having to manually process data and then manually create an output in Excel from it.
 - 'Slice and dice' the data in different ways – e.g. by Supplier. This will help to identify whether some suppliers are better at delivering certain outputs (e.g. blacktop) cheaper than others.
