Section 4 – Specification and about this procurement

Introduction

UK Shared Business Services Ltd (UK SBS) on behalf of UK Research and Innovation (UKRI), Natural Environment Research Council (NERC) – British Antarctic Survey (BAS) wishes to establish a contract for the appointment of a single Contractor to undertake the design and execution of the Polar Sediment Core Facility.

The specification will address the methodology to meet the project objectives, which are completion of phase 3 PSCR of the Polar Marine Aquarium project, completing the provision of a modern energy-efficient and environmentally friendly science facility for the polar aquarium and associated controlled environment experimental rooms that will ensure the health and welfare of the marine animals and therefore guarantee the conformity with the Home Office/CEFAS requirements for operating a polar aquarium and provide an efficient space to facilitate and extend the scope of the polar science delivered.

The current project presents a unique opportunity for BAS to initiate future proofing the science facilities that require cooling and refrigeration and remove HFCs from the respective systems. The preferred option for BAS is the use of natural refrigerant cooling system and in particular CO₂-based cooling and refrigeration. The Global Warming Potential values for HFC refrigerants are several thousand times higher compared to CO₂. In addition, leakage of CO₂ gas from a refrigeration system is consequently several thousand times less damaging to the environment than the release of any HFC gas.

Delivering one of the most sustainable and efficient natural refrigerant system is a priority on this project and will facilitate BAS to meet its carbon reduction target.

It is worth noting that the existing installation requires considerable manual handling, which is time consuming and a health and safety issue, so understanding these limitations and creating a design which improves on this is important to the success of the project.

The project will be CDM regulated, with UK Research and Innovation (UKRI), Natural Environment Research Council (NERC) – British Antarctic Survey (BAS) fulfilling the Client role only.

UK SBS is managing this procurement process in accordance with the Public Contracts Regulations 2015 (as may be amended from time to time) (the “Regulations”).

This is a Supplies and Services Contract being procured under the Open OJEU Procedure regulations.

This RFP sets out details of the UK Research and Innovation (UKRI), Natural Environment Research Council (NERC) – British Antarctic Survey (BAS) site and expectations of any successful supplier.

It is intended that the PSCF project will be procured using an NEC4 ECSC Contract.

It is important that all tendering contractors understand the drivers and constraints behind this procurement route, and the skills which they will have to demonstrate in order to be successful.

This Supplies and Services contract will be completed by **29th May 2020**.

Executive Summary

BAS Cambridge is the centre for coordinating and managing polar science and operations. Offices, science and engineering laboratories, as well as controlled environment facilities provide the focal point for UK's polar research effort. The BAS Polar Sediment Core Facility (PSCF) is currently used by BAS scientists, PhD students and external UK and EU collaborators (with associated income).

To facilitate the delivery of world class polar science, BAS have committed to invest in a science infrastructure project that comprises a new Polar Sediment Core Facility and associated laboratory space. The new science facilities are tailored to unlock the benefit of BAS expertise for stakeholders and will facilitate new collaborative R&D with industry and different academic disciplines, enabling novel research findings, inventive processes and innovative products.

The project objectives are the provision of a modern energy-efficient and environmentally friendly science facility for the polar aquarium and associated controlled environment experimental rooms that will ensure the health and welfare of the marine animals and therefore guarantee the conformity with the Home Office/CEFAS requirements for operating a polar aquarium and provide an efficient space to facilitate and extend the scope of the polar science delivered.

The PSCF is Phase 3 of the Polar Marine Aquarium project, Phase 1 & 2 were funded by NERC/BEIS in 2018/19, Phase 3 is jointly funded by BAS and the Wolfson Foundation

Together the three phases of the controlled environment facilities will provide unique research capabilities for UK science. The polar aquarium and associated temperature controlled experimental rooms (Phases 1 and 2) will allow novel research on biological topics centred on extreme environments, and Phase-3 will provide the same quality of facility for polar sediment cores.

The BAS aspiration is that the operation of the new science facility will reduce carbon emissions at least by 50% and achieve an energy reduction of at least 25% compared to the existing facility. For this reason, BAS has decided that, within the scope of the current project, the current conventional cooling and refrigeration equipment that operate with refrigerants of high Global Warming Potential will be replaced with a CO₂-based cooling and refrigeration system with heat recovery designed to meet the cooling and heating energy demands of the science facility.

Project Overview

The construction of the existing sediment stores was completed in 2002. The existing refrigeration plant and cold room structures have reached the end of their lifespan which results in difficulty to maintain the facility in a reliable condition. There is a high risk for system breakdown and subsequently loss of valuable and irreplaceable samples.

The sediment core stores are used to store sediment cores collected from various locations around the globe with an emphasis on Polar Regions. When experiments are carried out cores will be moved to the laboratories where processing and analysis can take place.

The current setup of the science facility comprises the following areas:

- Two cold rooms used for core storage designed to control temperature at +4°C
- A suite of laboratories used to process the sediment core samples
- Storage area and mezzanine for combined storage of sampling equipment and engineering materials.

The plant equipment, which consists of independent hydrocarbon refrigerant condensers of varying size, are positioned on each of the cold stores together with associated controls systems. Evaporators are positioned within the room mounted to the walls. All plant has an N+1 configuration i.e. duty standby for resilience.

Furthermore, the existing facility represents a high percentage of the electricity use of the entire BAS Cambridge site. This is partly because the current cooling and refrigeration equipment set-up is inefficient and outdated and therefore highly energy intensive. In addition, the current construction of the facilities & lack of insulation uniformity results in thermal bridges and defective parts which is increasing the cooling energy demands of the facility.

The current project presents a unique opportunity for BAS to initiate future proofing the science facilities that require cooling and refrigeration and remove HFCs from the respective systems. The preferred option for BAS is the use of natural refrigerant cooling system and in particular CO₂-based cooling and refrigeration. The Global Warming Potential values for HFC refrigerants are several thousand times higher compared to CO₂. In addition, leakage of CO₂ gas from a refrigeration system is consequently several thousand times less damaging to the environment than the release of any HFC gas.

Delivering one of the most sustainable and efficient natural refrigerant system is a priority on this project and will facilitate BAS to meet its carbon reduction target.

It is worth noting that the existing installation requires considerable manual handling, which is time consuming and a health and safety issue, so understanding these limitations and creating a design which improves on this is important to the success of the project.

Award Scoring criteria

Evaluation Justification Statement

In consideration of this particular requirement the Contracting Authority has decided to evaluate Potential Providers by adopting the weightings/scoring mechanism detailed within this RFP. The Contracting Authority considers these weightings to be in line with existing best practice for a requirement of this type.

Questionnaire	Q No.	Question subject	Maximum Marks
Price	AW5.2	Price	20%
Quality	PROJ1.2	Methodology	30%
Quality	PROJ1.3	Managing Working Conditions	10%
Quality	PROJ1.5	Project Plan	20%
Quality	PROJ1.6	Managing Continuity	10%
Quality	PROJ1.7	Risks and Mitigation of Risk	10%

Award Evaluation of criteria

Non-Price elements

Each question will be evaluated on a score from 0 to 100, which shall be subjected to a multiplier to reflect the percentage of the evaluation criteria allocated to that question.

Where an evaluation criterion is worth 20% then the 0-100 score achieved will be multiplied by 20%.

Example if a Bidder scores 60 from the available 100 points this will equate to 12% by using the following calculation:

$$\text{Score} = \{\text{weighting percentage}\} \times \{\text{bidder's score}\} = 20\% \times 60 = 12$$

The same logic will be applied to groups of questions which equate to a single evaluation criterion.

The 0-100 score shall be based on (unless otherwise stated within the question):

0	The Question is not answered, or the response is completely unacceptable.
10	Extremely poor response – they have completely missed the point of the question.
20	Very poor response and not wholly acceptable. Requires major revision to the response to make it acceptable. Only partially answers the requirement, with major deficiencies and little relevant detail proposed.
40	Poor response only partially satisfying the selection question requirements with deficiencies apparent. Some useful evidence provided but response falls well short of expectations. Low probability of being a capable supplier.
60	Response is acceptable but remains basic and could have been expanded upon. Response is sufficient but does not inspire.
80	Good response which describes their capabilities in detail which provides high levels of assurance consistent with a quality provider. The response includes a full description of techniques and measurements currently employed.
100	Response is exceptional and clearly demonstrates they are capable of meeting the requirement. No significant weaknesses noted. The response is compelling in its description of techniques and measurements currently employed, providing full assurance consistent with a quality provider.

All questions will be scored based on the above mechanism. Please be aware that there may be multiple evaluators. If so, their individual scores will be averaged (mean) to determine your final score as follows:

Example

Evaluator 1 scored your bid as 60
 Evaluator 2 scored your bid as 40
 Evaluator 3 scored your bid as 80
 Evaluator 4 scored your bid as 60
 Your final score will $(60+40+80+60) \div 4 = 60$

Price elements will be evaluated on the following criteria.

The lowest price for a response which meets the pass criteria shall score 100.

All other bids shall be scored on a pro rata basis in relation to the lowest price. The score is then subject to a multiplier to reflect the percentage value of the price criterion.

For example - Bid 1 £100,000 scores 100.

Bid 2 £120,000 differential of £20,000 or 20% remove 20% from price scores 80

Bid 3 £150,000 differential £50,000 remove 50% from price scores 50.

Bid 4 £175,000 differential £75,000 remove 75% from price scores 25.

Bid 5 £200,000 differential £100,000 remove 100% from price scores 0.
 Bid 6 £300,000 differential £200,000 remove 100% from price scores 0.
 Where the scoring criterion is worth 50% then the 0-100 score achieved will be multiplied by 50

In the example if a supplier scores 80 from the available 100 points this will equate to 40% by using the following calculation: Score/Total Points multiplied by 50 (80/100 x 50 = 40)

The lowest score possible is 0 even if the price submitted is more than 100% greater than the lowest price.

5.5. Evaluation process

5.5.1. The evaluation process will feature some, if not all, the following phases

Stage	Summary of activity
Receipt and Opening	<ul style="list-style-type: none"> RFP logged upon opening in alignment with UK SBS's procurement procedures. Any RFP Bid received after the closing date will be rejected unless circumstances attributed to the Contracting Authority or the e-sourcing tool beyond the bidder control are responsible for late submission.
Compliance check	<ul style="list-style-type: none"> Check all Mandatory requirements are acceptable to the Contracting Authority. Unacceptable Bids maybe subject to clarification by the Contracting Authority or rejection of the Bid.
Scoring of the Bid	<ul style="list-style-type: none"> Evaluation team will independently score the Bid and provide a commentary of their scoring justification against the Selection criteria.
Clarifications	<ul style="list-style-type: none"> The Evaluation team may require written clarification to Bids
Re - scoring of the Bid and Clarifications	<ul style="list-style-type: none"> Following Clarification responses, the Evaluation team reserve the right to independently re-score the Bid and Clarifications and provide a commentary of their re-scoring justification against the Selection criteria.
Validation of unsuccessful Bidders	<ul style="list-style-type: none"> To confirm contents of the letters to provide details of scoring and relative feedback on the unsuccessful Bidders Bid in comparison with the successful Bidders Bid.
