Section 5: Summary of Requirements / Description of Work:

1. CySAFA is the primary platform for data ingest and advanced analytics. It is fundamental to the Defensive Cyber Operations (DCO) effort to identify, protect, detect and respond to cyber threats and is a mission-critical asset to Defence's Cyber Security Operations Capability (CSOC). Sustained iterative development and incremental delivery continues to successfully provide significant improvements and enhancements to front-line functionality with the Agile delivery model enabling DCO to rapidly and coherently respond to the Authority's evolving cyber threat.
2. Subject to contract, the Supplier will transition service delivery from the current incumbent and work in close collaboration with the Authority, suppliers and other stakeholders, to ensure that the capability continues to meet operational priorities whilst evolving alongside the wider defensive cyber enterprise and meeting increased demand. This is the scope for the CySAFA3 capability, which is the third iteration of the supply contract for this requirement.
3. The Supplier will provide two delivery elements within the contract:
 - a. Service Integration (SI). Acting within the Technical Authority the Supplier is to support delivery of end-to-end services to operational users through integration of outputs (e.g. tools) from several suppliers to the data environment. The Supplier will also ensure the coherent evolution of the design and implementation of the capability as well as its compliance to relevant policies and standards. A responsive approach to service management and support is needed to match the tempo of cyber operations.
 - b. Data as a Service (DaaS). The Supplier will deliver sufficient software development resources to extend, integrate and enhance the functionality of the existing open-source big data technologies for which the design pattern is owned by the Authority. A subset of these resources is required to provide embedded support across identified Authority facilities and locations should high priority changes need to be made quickly in the operational environment.
