## Schedule 1: Services

### English for Education Systems Pilot Requirements

eCom understand that the English for Education Systems team intend to procure a management system to further enhance their offering to government and non-governmental participants through both English in education and Language and empowerment frameworks.

Based on the requirements provided surrounding potentially 3 distinct LMS pilots, eCom believe that eNetEnterprise is good fit, meeting all of the requirements and providing robust evidence from case studies about previous and current client projects.

The main requirements for the EES pilot LMS identified are explored below at a high level.

#### **SCORM 2004 compatibility (but preferably 1.2 also)**

eNetEnterprise supports both SCORM 2004 and 1.2 standards as well as allowing other multimedia resources to be added to the platform for consumption by participants. These can be positioned individually or as part of a wider guided programme of learning.

Highly functioning mobile interface including uploading assignments

Each eNetEnterprise project comes with a dedicated mobile application that can be accessed on both Apple and Android stores. The mobile application interface allows participants to access the same functions as they would on a desktop site including uploading assignments.

#### **Offline capabilities with tracking data synchronization features with permissions for security and 'on-device' storage/ cache capabilities for offline use.**

Our dedicated mobile applications and desktop sites all come with data sync capabilities for offline consumption.

#### **Ability to have multiple cohorts with various start dates and private forums**

eNetEnterprise comes with various options for organising cohorts within the system and structuring the programme of learning and interaction functionality, which can be issued by start dates, location, department and more all customisable data groups chosen by British Council. These would be agreed upon configuration at the specification phase.

#### **Social learning features with attractive user-friendly forums.**

The social module provides the functionality to add forum options for learning and moderated discussion as well as facilitating coaching and mentoring. Forum functionality includes but is not restricted to; moderation, profanity filters, the ability to share media and file formats as well as active/expiry dates and visibility options meaning it can be configured to encompass group discussions as well as one-to-ones between designated participants.

**Portfolio features that allow users to gather relevant evidence of their learning in various formats and choose to share this with others or not.**

eNetEnterprise comes with a robust evidence portfolio function that allows users to upload, gather and share evidence in various formats as well as allow for reflection and input from peers or facilitators as appropriate. These can be pre-defined exercises or requirements or left more open for participants to interpret and get involved as they see fit.

**Assessment e.g., badges and micro-credentials**

eNetEnterprise can support the integration of eNetBadges our digital credential platform where British Council can create and distribute badges in conjunction with their programmes offered through the LMS. Badge earners have the ability to share their badges on social media and backpack the badge externally via Badgr meaning for life-long attainment. More detailed information on eNetBadges can be found in the previous section.

**Ability to support communities of practice and community driven learning**

Forum capability in eNetEnterprise can be used to create closed groups of participants, where they can share best practice and resources and develop psychologically safe relationships with their cohort. This would potentially replace or complement the facebook and whatsapp groups used currently; keeping visibility of participation alongside the learning content.

**Efficient monitoring and evaluation tools including flexible dashboard options**

Using our powerful reporting tool eNetReports we can work with British Council to ensure customised and flexible dashboard options for defined user roles. This can incorporate instant reporting for administrators allowing for relevant, real time information to be available within just a few clicks.

**Reporting to include forum activity**

Although eNetEnterprise comes with core reporting around activity and learning progress in relation to SCORM and other multi-media resources we do also provide extensive reporting across all functionalities within the system including forum activity. During the specification and configuration phase we will work with British Council to identify the reporting needs and can pull custom reports across each project site separately or collaboratively.

**Learning tool integration (e.g., synchronous tools, 3rd party applications)**

eCom are experienced in various learning tool integrations through both API and LTI integrations. We would work with British Council to agree the data set to be transferred through the integration as well as the frequency and confirm all details in a specification.

**SSO integration with local MOE solutions**

We have extensive experience of SSO integrations for various organisations and are happy to work with British Council to implement these as and when required.

**Domains approach to pilot projects**

eCom as standard will provide a unique domain address for each project allowing a strong brand identity to be fostered from the desktop site through to the mobile application. In this instance, we would provide three distinct domains for the MOOC, SPOC and COP/TAG.

We appreciate that the EES project team are looking to run three distinct pilots incorporating various functionality and key aspects as outlined below and we can confirm we can meet the expectations and requirements around these.

**Massive Open Online Course (MOOC)**

- Social, collaborative element not required
- Clean, simple interface with specific design for MOOC

- SCORM content developed by British Council
- Easy enrol
- Analytics dashboard
- Badges
- January first course run

### **Small Private Online Course (SPOC)**

- Social, collaborative element required
- VC integration
- Video Based Observation platform integration (TBC)
- Clean, simple interface with specific design for SPOC
- SCORM content developed by British Council
- Analytics dashboard
- Badges
- January/February first course run

### **Communities of Practice (Teacher Activity Groups)**

- Social, collaborative element required
- “Portfolio”
- Clean, simple interface with specific design for COP/TAG
- Analytics dashboard
- Badges
- January/February first course run

In order to allow for appropriate functionality, branding and identity across all three pilots we suggest each pilot has its own site and domain including dedicated mobile application for the offline use and synchronisation features. We will however build in single sign on capabilities such a MOOC user which to take part in a SPOC or vice versa to allow for only one account being required.

Interface design is approached on a site-by-site basis allowing for a customised dashboard highlighting the core features such as forums, portfolios or learning programmes.

We will include customised reporting access to information surrounding data synchronisations from devices to allow British Council to collate data surrounding the uptake of offline use within these applications. All data will be owned by British Council and can be used for further research or studies as desired.

eNetBadges would be integrated as standard with automated issuing enabled either through API rules or as part of SCORM learning interactions. We can turn on other key functionality such as social forums and assessment in line with requirements for each pilot.

## **Schedule 2: Call-Off Contract charges**

For each individual Service, the applicable Call-Off Contract Charges (in accordance with the Supplier’s Digital Marketplace pricing document) can’t be amended during the term of the Call-Off Contract. The detailed Charges breakdown for the provision of Services during the Term will include:

## Investment - eNetEnterprise

At the end of the pilot we'd be happy to review evidence of use with the EES team to agree longer-term first line support package.

Annual licences comprise of user costs, hosting, and browser maintenance costs and calculated using an aggregate of anticipated user numbers across all pilots as outlined below. The relevant discount has automatically been applied in the above tables at 5%.
