1 SITE INFORMATION

1.1 Site boundary, extents and access arrangements

Access to depots will need to be arranged in advance with depot supervisors and personnel will need to be escorted by depot supervisor and be given a site induction on arrival. Contact details for depot supervisors will be provided to the successful tenderer in order to arrange visits.

Coast Railway will require track possessions with Network Rail and Nexus in order to carry out survey works. From previous experience the duration of a possession will be approximately 4 – 5 hours per night due to Nexus restrictions.

1.2 Pavement

N/A

1.8 Structures and Buildings

See Works Information for sites to be surveyed and types of survey to be carried out.

1.9 Tunnels

N/A

1.10 Technology

N/A

1.11 Statutory Undertakers

It is assumed no Statutory Undertaker Apparatus will be uncovered during the survey works. However, any requirements for trial holes for testing will need suitable procedures in place to identify any equipment.

1.12 Traffic

It is assumed that generally, traffic management won't be required. It is expected that surveyors will be able to access structures from off network or by short stop methods. However, some areas of structures may require traffic management to enable surveyors to carry out surveys; this will be arranged by Highways England at the surveyors request.
