Annex 1 – Authorised Processing Template

Annex 2 – Specification

Background

The overall purpose of the FLOWERS project is to support future transition to floating offshore wind technology. The project aims to improve our knowledge of environmental risks relevant to UK Waters, and to provide tools applicable in future offshore wind planning.

This project will look at three topics (two technical and one overarching framework) that have a relatively poor knowledge base and aim to improve the level of confidence in addressing EIA requirements based on evaluation of the scientific evidence supported by modelling (where possible) for each of the topics in the context of floating offshore wind.

Scope of work

The Work Package consists of three elements (with #2 being the focus of this RFQ):

1. Scour- sea shelf scour project addressing physical consequences of the hydrodynamic changes associated with the scour and the potential ecological consequences resulting from the physical changes (review and modelling).
2. EMF- Modelling assessment of encounter rate between sensitive species and EMF emitted by dynamic cables (which will build on previous workshops that will have the output of an agreed method to calculate EMF from subsea cables).
3. Multiple stressors framework to draw together and consider environmental stressors in an integrated and adaptive manner in the EIA process.

EMF Component

This project component aims to address the knowledge gap through meeting the following objectives using the methods summarised:

Objective 1) Defining the EMF environment associated with subsea cables (both on the seabed and in the water column) through building on simple EMF emission models agreed by electrical engineers and oceanographers. The agreed models will come from the OWEC Discretionary funded EMF technical workshop, which Marine Science Scotlands expertise is also contributing to. The output will be estimation of EMF associated with cables existing (fixed OWF) and planned (FLOW) in different geographical areas through applying the newly agreed methods. First EMF in 2D will be modelled followed by extension to 3D.

Objective 2) Verification of EMF model magnetic field related parameters through field data collection. Existing and available data are very sparse; however, it is relatively straightforward to measure local magnetic fields (but not electric fields). Magnetic fields are the primary emission from electricity transmission so as a first stage in the development of appropriate EMF modelling, we will measure the magnetic components of local EMF to verify calculation parameters used in 1) above, to validate EMF modelling (magnetic component). Therefore, field measurements at different geographic

locations will be undertaken to demonstrate that the model estimations are valid. We will visit several sites around the UK where existing subsea export cables from offshore wind farms come to shore. The magnetic fields will be measured in the intertidal zone. The geographical spread of existing OWF across the UK provides sites with different orientations to the local geomagnetic field.

Objective 3) Estimation of the temporal and spatial overlap between selected sensitive species and cabling routes (based on planned and future Offshore Transmission Network Review, OTNR, scenarios). In discussion with MS colleagues and the Project Advisory Group (PAG), we will select focal species and their predicted distribution and movement (e.g. migratory routes) will be represented through spatial data outputs. Data on the occurrence, distribution and known movement of these species will be collated and species distribution modelling within UK waters will be applied to produce spatial data (with associated statistical confidence) to be overlaid on cable location data. It is anticipated that most species will only have partial data therefore the modelling will assist in filling gaps as far as possible, with an associated confidence assessment. The models will be updatable in the future when further data become available.

Objective 4) Development of a version 1 model to determine the likelihood of encounter between EM-receptive species and dynamic cable EMF. Through the outputs of the first 3 objectives the spatial data on cable routes and their location (existing and OTNR scenarios) will be overlaid with the distribution models on sensitive species. This will provide an initial likelihood of spatial overlap of species and cables. The temporal distribution will then be considered in terms of percentage overlap during time periods for different life stages to create encounter probability predictions. The limitation of the spatial data will be expressed in terms of confidence linked to standard categorical approaches used in EIAs. This version 1 model will be modular so that in future with increased knowledge (such as electrical field data or more movement data on a target species) the confidence will be updatable with a view to become statistical where data allows. This will lead to recommendations for determining the risk of potential impact with an associated uncertainty categorisation based on available knowledge. Therefore, assisting in the assessment of the potential impact of EMF based on geographic location and cable properties.

Objective 5) A set of recommendations will be drawn up on the method to determine EMF (in 2D and 3D for magnetic field component, i.e. v1) and the likelihood of encounter using the outputs from the other work activities.

Requirement

Support for the objectives:

Objective 1 (March - May 2023): Discussion and agreement with Marine Science Scotland on the appropriate application of the EMF approach coming from the EMF technical workshop to estimate EMF associated with power cables.

Objective 2 (April - October 2023): EMF field measurement sites to be selected in agreement with Marine Science Scotland. MSS to assist with identifying Scottish sites

and obtaining access to intertidal zone for measurement. MSS to assist in the field, where possible (3-4 days during the period June to Oct 23).

Objective 3 (May - Dec 2023): MSS to assist in the selection of sensitive species and provide access to data, if available, to enable temporal and spatial overlap of the species with cabling routes to be assessed. MSS will also assist with data access and data handling and also data interpretation where appropriate.

Objective 4 (July 2023 - March 2024): Expert comment on the development of the v1 model of the likelihood of spatial overlap of species and cables and the outputs. Review and comment on policy relevance of the project outputs to the EIA process for Offshore wind developments.

Objective 5 (July/Aug 2024 and Jan/Feb 2025): Review and comments on the guidance and later on the final FLOWERS report.

Delivery:

- Provide expert input to each objective during the time periods indicated.
- Participate in PAG meetings and project progress discussions agreed by the Cefas-MSS team.
- Provide review of final FLOWERS report and the guidance.

3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) ~~Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.~~ Not Used

4.2 Goods clauses

- (a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.
- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.

Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.
- (k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the

cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

~~(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.~~
