Section 4 – Specification

Introduction

The Strategic Innovation Fund (“SIF”) is a funding mechanism for network licensees, i.e., the Electricity Distribution, Electricity Transmission, Gas Transmission and Gas Distribution network companies and the Electricity System Operator (ESO).

The SIF aims to find and fund ambitious, innovative projects with the potential to accelerate the UK transition to net zero. These projects should help shape the future of the gas and electricity networks and succeed commercially where possible.

The fund is expected to invest £450 million in energy network innovation between 2021-2026, with the option to extend and increase as necessary. The source of this funding is a levy on consumer energy bills.

In 2021, Innovate UK (IUK) was appointed as the delivery partner for the SIF. The Fund will primarily provide grant funding to innovation projects developed by a collaboration of partners and led by a licensee.

The SIF will support network innovation that contributes to the achievement of Net Zero, while delivering net benefits to energy consumers. It will coordinate network innovation funding with other public sector funding initiatives, thereby ensuring greater flexibility and strategic alignment in innovation funding and eliminating both unnecessary duplication and funding gaps.

The governance of the SIF also mandates that this successful innovation be shared freely between network companies, ensuring that all Great Britain consumers can benefit from their initial investment into the innovation.

The SIF has now reached the stage where projects funded in round 1 are applying for the final funding phase, Beta, where projects will demonstrate their innovations and put plans in place to take the outputs into business as usual.

Aims & Objectives

In order to demonstrate and ensure accountability for the utilisation of SIF for network innovation, projects must define, forecast, monitor and report the expected impacts and benefits to be achieved.

It is in this context that Innovate UK is seeking an expert in impact and benefits management to engage with Innovate UK, Ofgem, the Network Companies and other stakeholders to understand the user needs, reviewing best practice (inside the energy industry and externally), and identifying gaps in the current methodologies used, leading to a recommendation of a more efficient and effective approach.

The expected tasks are as follows:

Understand current processes utilised in network innovation for impact and benefits management

- Establish user needs from the impact and benefits management process, including Innovate UK, Ofgem and the Network companies.

- Review other best practices in delivery of impact and benefits management in innovation outside of the energy sector

-Identify where the gaps are in current processes and recommend how these might be addressed by alternative approaches/ refining existing processes.

A final report and presentation should cover details of the evidence base included in the research, the methodology taken, any assumptions made, qualification of the recommendations and suggestions of the next steps.

This piece of work should be concluded (if possible) by the end of the May 2023.

Requirement

The successful supplier is expected to have in depth knowledge of impact and benefit management methodologies, with expertise of utilising the most up to date tools and techniques.

The successful supplier will need to have exceptional stakeholder management skills and be able to work alongside Innovate UK, Ofgem, BEIS and the network companies without any conflict of interest.

Attention to detail is an essential requirement to carry out this work.

The expected tasks are as follows:

- Understand current processes utilised in network innovation for impact and benefits management.
- Establish user needs from the impact and benefits management process, including Innovate UK, Ofgem and the Network companies.
- Review other best practices in delivery of impact and benefits management in innovation outside of the energy sector.
- Identify where the gaps are in current processes and recommend how these might be addressed by alternative approaches/ refining existing processes.

Timetable

March 2023 – June 2023- March– Kick-off meeting & review of current processes

- April- Establish user needs & review other best practices.
- May - Complete gap analysis & prepare draft report
- June – Presentation and recommendations of next steps

Part 2 (tbc)

June 2023 to December 2023

Section 5 – Evaluation of Bids

The evaluation model below shall be used for this ITQ, which will be determined to two decimal places.

Where a question is 'for information only' it will not be scored.

The evaluation team may comprise staff from UK SBS and the Contracting Authority and any specific external stakeholders the Contracting Authority deems required.

To maintain a high degree of rigour in the evaluation of your bid, a process of commercial moderation will be undertaken to ensure consistency by all evaluators.

Scoring criteria

Evaluation Justification Statement

In consideration of this requirement the Contracting Authority has decided to evaluate Potential Providers by adopting the weightings / scoring mechanism detailed within this ITQ. The Contracting Authority considers these weightings to be in line with existing best practice for a requirement of this type.

Evaluation Envelope	Q No.	Question subject	Maximum Marks	
			Overall	Breakdown
Commercial	AW5.1	Price	20%	20%
Technical	PROJ1.1	Understanding the Project Environment	80%	35%
Technical	PROJ1.2	Approach/ Methodology		15%
Technical	PROJ1.3	Staff to Deliver		15%
Technical	PROJ1.4	Project Plan, Risk Management and Timescales		15%

Evaluation of criteria

Non-Commercial Elements

Each question will be judged on a score from 0 to 100, which shall be subjected to a multiplier to reflect the percentage of the evaluation criteria allocated to that question.

Where an evaluation criterion is worth 20% then the 0-100 score achieved will be multiplied by 20%.

Example if a Bidder scores 60 from the available 100 points this will equate to 12% by using the following calculation:

$$\text{Score} = \{\text{weighting percentage}\} \times \{\text{bidder's score}\} = 20\% \times 60 = 12$$

The same logic will be applied to groups of questions which equate to a single evaluation criterion.

The 0-100 score shall be based on (unless otherwise stated within the question):

0	The Question is not answered, or the response is completely unacceptable.
10	Extremely poor response – they have completely missed the point of the question.
20	Very poor response and not wholly acceptable. Requires major revision to the response to make it acceptable. Only partially answers the requirement, with major deficiencies and little relevant detail proposed.

40	Poor response only partially satisfying the question requirements with deficiencies apparent. Some useful evidence provided but response falls well short of expectations. Low probability of being a capable supplier.
60	Response is acceptable but remains basic and could have been expanded upon. Response is sufficient but does not inspire.
80	Good response which describes their capabilities in detail which provides high levels of assurance consistent with a quality provider. The response includes a full description of techniques and measurements currently employed.
100	Response is exceptional and clearly demonstrates they are capable of meeting the requirement. No significant weaknesses noted. The response is compelling in its description of techniques and measurements currently employed, providing full assurance consistent with a quality provider.

All questions will be scored based on the above mechanism. Please be aware that there may be multiple evaluators. If so, their individual scores will be averaged (mean) to determine your final score as follows:

Example

Evaluator 1 scored your bid as 60

Evaluator 2 scored your bid as 60

Evaluator 3 scored your bid as 40

Evaluator 4 scored your bid as 40

Your final score will $(60+60+40+40) \div 4 = 50$

Once the above evaluation process has been undertaken and the scores are apportioned by evaluator(s) this will then be subject to an independent commercial review and moderation meeting, if required by the commercial lead, all changes will be formally recorded relative to the regulatory obligations associated with this procurement, to ensure that the procurement has been undertaken in a robust and transparent way.

Commercial Elements will be evaluated on the following criteria.

The lowest price for a response which meets the pass criteria shall score 100. All other bids shall be scored on a pro rata basis in relation to the lowest price. The score is then subject to a multiplier to reflect the percentage value of the Commercial criterion.

For example - Bid 1 £100,000 scores 100.

Bid 2 £120,000 differential of £20,000 or 20% remove 20% from price scores 80

Bid 3 £150,000 differential £50,000 remove 50% from price scores 50.

Bid 4 £175,000 differential £75,000 remove 75% from price scores 25.

Bid 5 £200,000 differential £100,000 remove 100% from price scores 0.

Bid 6 £300,000 differential £200,000 remove 100% from price scores 0.

Where the scoring criterion is worth 50% then the 0-100 score achieved will be multiplied by 50.

In the example if a supplier scores 80 from the available 100 points this will equate to 40% by using the following calculation: $\text{Score/Total Points multiplied by 50}$ $(80/100 \times 50 = 40)$

The lowest score possible is 0 even if the price submitted is more than 100% greater than the lowest price.

This evaluation criteria will therefore not be subject to any averaging, as this is a mathematical scoring criterion, but will still be subject to a commercial review.

Evaluation process

The evaluation process will feature some, if not all, the following phases.

Stage	Summary of activity
Receipt and Opening	<ul style="list-style-type: none"> ITQ logged upon opening in alignment with UK SBS's procurement procedures.
