2. BACKGROUND TO THE CONTRACTING AUTHORITY

- 2.1 The Insolvency Service is an executive agency of the Department for Business, Energy, and Industrial Strategy (BEIS).
- 2.2 Our purpose is delivering economic confidence. We do this by supporting those in financial distress, tackling financial wrongdoing and maximising returns to creditors.
- 2.3 We maintain the standards that help make Britain one of the best places in the world to do business. We are proud to provide an insolvency regime which is highly regarded globally. We authorise and regulate the insolvency profession. We deliver insolvency services, often when there is no private sector practitioner. Where legislation needs improving, we advise on the changes required.
- 2.4 Treating each of our customers as an individual and with respect is at the heart of what we do. We balance our efforts in protecting creditors and the public from misconduct and scams, with providing help to individuals and companies going through financial failure – providing a proper way out. We continuously improve our services and are moving more services online so people can connect with us better.
- 2.5 One of our directorates is the Official Receivers Service. Our official receivers deal with personal debts and insolvent businesses – realising and distributing assets, helping people back on their feet financially and carrying out investigations to support the integrity of the Insolvency system. Treating each of our customers as an individual and with respect is at the heart of what we do. We balance our efforts in protecting creditors and the public from misconduct and scams, with providing help to individuals and companies going through financial failure – providing a proper way out. We continuously improve our services and are moving more services online so people can connect with us better.

3. Background to requirement/OVERVIEW of requirement

- 3.1 The Customer Digital Services project was set up to support the Agency's Five - Year Strategy (The Insolvency Service Strategy 2021 to 2026 - GOV.UK), with the aim to identify and deliver technology related improvements to how we interact with our customers. The improvements we deliver will be in line with the agency vision to be digital first and easy to do business with. This may involve improving existing digital external contact points or digitising services which are currently paper based.
- 3.2 **Two of our key goals are to:**
 - Minimise avoidable customer contact by providing customers with what they need through greater automated communication and self-serve opportunities

- Identify opportunities to enhance our existing external contact points to ensure customers are directed to the appropriate channel and can provide the right information first time.
- 3.3 After successful Pre-Discovery, Discovery, and Alpha phases, the project has identified a solution to digitise our Report to Creditors (RTC) and Proof of Debt (POD) processes. These processes are high-volume, paper-based, and heavily reliant on manual activities which use unnecessary resource throughout the existing processes.
- 3.4 Our users are creditors, split into groups based on size which reflects the regularity with which they engage with the processes, and our internal users who process the claims. As an indication of volumes, we anticipate 300,000-350,000 RTCs will be issued across our cases per year. The digital service will enable all creditors in debtor or creditor driven bankruptcies and company liquidations to register their interest in the insolvency case. They can obtain information about the insolvency and expected outcomes (Report to Creditor) and submit their Proof of Debt with supporting evidence as required. This will be via a portal with a dashboard of key information and prompts for the user to take action.
- 3.5 This service should have interoperability with the current and future case management system as well as extensibility for other dashboards.
- 3.6 Further details (Functional and Technical Requirements) can be found at Appendix 1

<ul style="list-style-type: none"> - Meeting The Proposal Criteria - 	<ul style="list-style-type: none"> - <i>[Describe:</i> - <i>Your approach to a hypercare service for the solution</i> - <i>Your approach to quality assuring the solution against functional and non-functional requirements</i> - <i>Your approach to designing and delivering the solution while following the appropriate NCSC Cyber Security Guidance as closely as possible</i> - <i>Your approach to collecting requirements and engaging stakeholders, managing Agile backlogs, sprint planning, estimation, and prioritization</i> - <i>Your approach to transition to operations</i> - <i>Your approach to transitioning the service from integrations with one case management system to another</i> - <i>Approach to designing and delivering the solution, adhering to government digital standards, including optional deliverable of POD receipt, automation, processing into file repository and case management system updated with location.]</i>

-	<p>The approach to a hypercare service for the solution commences from Sprint 1. Risks will be reduced by adhering to GDS processes, supporting INSS and ensuring assessor and user feedback is integrated into the design and delivery process. Routine testing and research with users reduce potential issues minimising change post deployment.</p> <p>INSS will be provided a dedicated hypercare team of Developers, Testers and Architects led by the Delivery Lead. Reliability is ensured through monitoring as each service is built with appropriate telemetry, defined in collaboration with INSS operations, enabling observability.</p> <p>Telemetry is collected within monitoring solutions, e.g., NewRelic, with alerts configured should thresholds be breached. Automated unit and end-to-end tests make deployment of new releases fast, secure with zero-downtime and without triggering regressions. ITIL processes govern problem and incident management, identifying and measuring continuous improvement.</p> <p>INSS will have a warranty period of 6 months post-delivery to resolve any issues.</p> <hr/> <p>Quality is assured from the start of the engineering process through automation including Static (Sonar) and Dynamic Testing (BurpSuite for example) and Automated Testing Packs providing regression/functional testing.</p> <p>This process assures that the quality benchmark is being met and deliverables meet expected test criteria. Routine performance testing and reporting will demonstrate non-functional service levels are achieved.</p> <p>Collaborating with external partners to provide routine penetration testing assures security. Issues raised during penetration testing will be triaged and any risk will either be suitably remediated in the solution or accepted onto the INSS RAID log.</p> <p>Acceptance criteria on all user stories will be translated into executable tests against deliverables via the application of Test-Driven-Development ensuring transparency of met acceptance criteria and the achievement of a shared definition of done.</p> <hr/> <p>[Redacted]</p> <hr/> <p>Netcompany's approach to collecting requirements and engaging stakeholders is as follows:</p> <p>Workshops with relevant SMEs and stakeholders will build on the requirements already identified including identifying business rules and process steps, User stories with acceptance criteria will be created in JIRA. Netcompany's Technical Architect and Delivery Lead will confirm suitability and deliverability of the proposed technical solution and estimation for the delivery via internal governance.</p>
---	---

	<p>Stakeholders will be invited to demonstrations allowing an opportunity to collect further requirements and feedback. The Delivery Lead in collaboration with INSS will proactively identify and engage with stakeholders who are unable to attend sharing recordings of the sessions and offering tailored sessions.</p> <p>Collaborating with INSS, Netcompany will identify creditors for private beta to onboard service users, gathering feedback and any operational issues.</p> <p>Using INSS existing collaborative tools, example JIRA & Confluence, the Scrum Master will capture and manage requirements ensuring JIRA is kept up-to-date and requirement meet the quality required at each stage of maturity.</p> <p>A 'one-team approach' will bring the right people, skills and experience to the estimation process ensuring an effective process with buy-in from the relevant stakeholders.</p> <p>The Scrum Master will run weekly product backlog refinement sessions to provide mature input into sprint planning allowing enhancements to be introduced.</p> <p>The Scrum Master will lead sprint planning to prioritise backlog items to promote into sprint backlogs. The whole team will agree commitment to the sprint outcomes, with data on past delivery used to validate deliverability of the current sprint.</p> <p>The Scrum Master will ensure effective sign-off and record keeping capturing requirements and managing work as single backlog with frequent refinement as the requirement matures. Retrospectives will identify opportunities to improve our collective delivery approach and product quality allowing us to accelerate delivery and maximise benefits delivered through continuous improvement initiatives. These initiatives are also informed by user research findings allowing improved usability through incremental/iterative development cycles.</p> <p>Netcompany's delivery approach ensures flexibility to accommodate change related to the above without delaying service delivery.</p> <hr/> <p>To ensure an effective transition to operations approach, INSS and Netcompany will work as one-team to deliver the following outcomes:</p> <p>Knowledge Transfer throughout the delivery and hypercare facilitated by a DevOps culture where INSS operational teams will be proactively engaged with Netcompany development teams facilitating open communications and providing INSS a single point of contact.</p> <p>Core dependencies and operational processes will be documented and shared through runbooks, equipping operations with information to address potential issues.</p> <p>Regular Reviews allow understanding to be validated and knowledge gaps to be identified and promptly remedied.</p> <p>Telemetry collaboratively defined with INSS based on a shared understanding of current operational processes will be built into the solution. This enables</p>
--	---

	<p>Operations to effectively monitor solution run-state and identify continuous improvement opportunities.</p> <hr/> <p>Netcompany understands the risk of failing dependencies when integrating case management systems. Mitigation is through deploying integration services avoiding direct dependencies, for example, loosely-coupling case management and end-user service allowing change without introducing fragility into the system architecture. This is achieved using messaging patterns or by building adapters reducing dependencies and associated risk.</p> <p>During transition, Netcompany will consider caseload and in-flight casework to minimise any dual-running. For example, deploying messaging topics allowing dual-running of case management systems enables like-for-like real-world environment testing. This mitigates any risk of data-corruption during dual-running by allowing results from both systems to be compared.</p> <hr/> <p>Netcompany will design and deliver a solution that is accessible, secure, and user-centric. Collaborating with INSS User Researchers and Designers we will deliver a solution addressing the needs of INSS and its service-users. Using open standards and existing solutions where possible, Netcompany will ensure development aligns to Government Digital Standards remaining secure, protecting users' data, and meeting WCAG 2.1 AA and GDPR.</p> <p>Netcompany will use Gov Notify for POD receipt and Power Automate for automating processing into file repository and case management system updated with location. These features are included in delivery plan and costings and will be built for extensibility allowing INSS to incorporate this capability in future should the option not be taken.</p> <p>Collaborating as 'one-team,' regular meetings and clear responsibility and decision-making processes will ensure effective planning, progress reviews, user-feedback, and approvals.</p> <p>Working in partnership with the assigned Government Digital Standards Assessor, Netcompany will ensure deliverables are available for assessment at every stage. Feedback will be addressed to ensure a positive outcome in each assessment.</p> <p>-</p>

1.1 Cultural Fit Response

Working as one-team with INSS and other suppliers, Netcompany will promote **a no blame culture**. Driving continuous improvement by encouraging people to reflect, **learn from mistakes** and **take responsibility for their work**.

Netcompany **shares knowledge and experience**, including **working with clients with low technical expertise**, through:

1. **Building technical expertise across clients' teams** through targeted training from the **Netcompany Academy**
2. Proactively **sharing thought-leadership and experience evidencing** how technology has delivered business and user benefits and outlining business cases
3. Bringing customers and suppliers together through quarterly **technology partner innovation days** (inviting **stakeholders** to meet guest speakers from major vendors including **Microsoft**) identifying changes today that will benefit clients tomorrow.

Working as one team with INSS, Netcompany's approach to **optimising the user-journey and minimising environmental footprint** includes:

Approach	User-Journey	Footprint
Embedded Telemetry	Continuous improvement through observability on the process journey	Observability, reduces nugatory steps delivering an efficient process requiring less compute
Compressed PDFs	Faster download and efficient printing	Less compute Efficient printing means less toner/paper waste
Payload Compression	A faster journey as smaller requests and response	Less processing across the transaction
Appropriate Caching	Quicker user-journey requiring less roundtrips to the server	Reducing server roundtrips reduces the footprint

Following government guidance, Netcompany's use of Cloud is reported to reduce **environmental footprint by 65%**.

Compliant with **PPN 06/21**, Netcompany **demonstrates commitment to carbon reduction** through actions that support its social value pledge to '**achieve the UK national net carbon zero targets by 2040**'.

Examples of these actions include:

- Launch of carbon literacy training programme
- Increase supply-chain commitment to NetZero targets
- Innovation days with supply-chain and customers.

'Greenhouse Gas Emissions' are measured and reported via the Carbon Accounting Process and progress against the board-approved Carbon Reduction Plan published annually.

Netcompany has implemented an Environmental Management System aligned to **ISO:14001** which is scheduled for accreditation by April 2023.

In addition to the approach detailed above, Netcompany will work in partnership with INSS and stakeholders through **shared tools and plan**, and **daily reviews**, Netcompany will ensure alignment and a shared understanding of delivery goals and transparent management of dependencies avoiding delays. **Proactive engagement** through face-to-face and recorded demos, documented design, and delivery plans, plus a flexible approach tailored

to suit individual stakeholders, will ensure buy-in and a one-team ethos.
Developed with experts, an **accredited Social Value Strategy and Framework** underpins

Netcompany's **approach to tackling workplace inequality**.

Career development is supported with a personal plan, mentor and equal access to **training and certification** in Netcompany's Academy and via partners, such as **Microsoft**.

Inclusive recruitment practices ensure **employment** opportunities are accessible.

In 2023, there will be a minimum of 20% women across all career levels and Netcompany will become a 'Disability Confident' Level-3 Employer (Level-2 achieved Dec22).

Targeted support provides **skills** to individuals facing barriers to employment including:

- Apprenticeships, work-experience, and internships
- Award-winning '**Growing Talent Digital Leeds**' promoting careers and addressing the skills gap in young people.

A documented policy ensures **equal pay** and meritocratic promotion through equal performance criteria, transparent bandings, and equal pay reporting.

Appendix One – Insolvency Service Environmental Policy

The Insolvency Service: Environmental Policy

The Insolvency Service is a Government Executive Agency, sponsored by the Department for Business, Energy and Industrial Strategy (BEIS). Our core objective is to deliver economic confidence. We are the government agency that provides services to those affected by financial distress or failure. We play a vital part in promoting long-term economic growth by dealing with financial failure and giving confidence to lend. Our goal is a fair and open insolvency system that works well, and a marketplace that is fair for businesses and individuals.

Here at the Insolvency Service we are committed to protecting and enhancing the environment both locally and globally. In this respect we will make every effort to:

EP1. Reduce the impact of our activities on global environmental issues such as climate change, resource depletion, loss of habitat and biodiversity.

EP2. Prevent environmental pollution arising from our own operations by meeting the requirements of all relevant environmental legislation and use our powers to minimise the impact of others.

EP3. Minimise the volume of waste generated by the Agency, whilst embedding the Waste Hierarchy of Reduce, Re-use and Recycle into all our waste procedures.

EP4. Preserve and enhance biodiversity on our sites where we have the opportunities and scope to do so.

EP5. Encourage the use of sustainable modes of transport or consider alternative working practices where practical e.g. proportionate hybrid working, to mitigate the environmental impact of travel.

EP6. Support environmental initiatives that improve health and wellbeing.

EP7. Encourage the reduced consumption of natural resources, water and energy.

EP8. Operate a procurement policy that minimises the use of environmentally damaging products, packaging and services by considering whole life costs; encourages the reuse and use of recycled materials; and incorporates Social Value considerations within procurement activities.

EP9. Provide information and support to staff and customers to promote the skills and knowledge required for sustainable development.

EP10. Commit appropriate levels of staff and financial resources to deliver the aims of the environmental policy.

EP11. Develop strategic partnerships with local, regional and national organisations to improve the management of environmental issues.

EP12. Review the Environmental Policy every three years and annually assess the effectiveness of our [upcoming] Sustainability Strategy to reflect the current objectives and targets of the Agency.

Introduction

This Policy sets out a framework which follows a 'layered' physical security approach. It allows for suitably secure environments from which the Insolvency Service can operate to achieve its strategic aims and objectives. The implementation of proportionate protective security controls ensures the safety of personnel and protection of sensitive assets/material at official (sensitive) level.

The Centre for the Protection of National Infrastructure (CPNI) physical security (secured by design) principles should always be considered when assessing new locations and refurbishments. When applying these principles, we consider (deter, detect, delay, mitigate and response) "Defence in Depth" to help protect our infrastructure and people.

A layered security approach (physical, procedural and technical) can include the following control measures; reception barriers, guard force, access-controlled doors, robust windows and doors, internal/external CCTV, intruder alarms, lockable storage and hostile vehicle mitigations.

Purpose

This policy sets out the (proportional) approach to be adopted to manage, develop, improve and validate physical security across the Insolvency Service estate.

It is essential that our business is conducted in an environment where potential threats (including those from both natural and human-made hazards, terrorism, crime and insider threats) have been identified, risk assessed and appropriately mitigated to prevent interference, loss or compromise (malicious or otherwise).

In instances where physical security enhancements are dismissed by a third party, i.e. the Landlord and/or existing tenants, the Physical Security Manager(s) will remediate the inherent unacceptable risk. After remediation, any acceptable residual risk(s) will be managed via the security risk register, until such time that an alternative solution is accepted.

Scope

This policy applies to all Insolvency Service employees, contractors, partners and service providers, including those on co-located sites and sites owned by other public bodies. This will also include employees of other organisations who are based or working in Insolvency Service occupied premises.

Responsibilities

The level of risk and potential impact to Insolvency Service information, assets and people will determine the controls to be applied and the degree of assurance required. The Physical Security Manager(s) will ensure that the baseline (CPNI) physical security measures have been assessed according to Agency need, are in place at each site, and provide annual assurance (Departmental Security Health Check) that such measures are in place. The assurance will include proportionate and compliant controls to provide protection to all occupants and assets. These measures can be strengthened when required, i.e. in response to a security incident or change in the Government Response Level.

This assurance will be articulated in the form of an annual on-site inspection report conducted by the Physical Security Manager(s).

The implementation of all security measures must be able to provide evidence that the selection was made in accordance with the appropriate information security standards ISO27001/27002, physical security advice taken from the CPNI and HMG Security Policy Framework.

As detailed in the scope all employees are responsible for physical security. A security conscious workforce will promote the desired security behaviours, these include: engagement, responsibility for security issues, increased compliance, reduced risk of insider incidents and overall raised awareness resulting in increased vigilance across the estate. Developing and sustaining an effective security culture is an essential component of a good protective security regime.

The Head of Estates approves expenditure for any in-house physical security enhancements, except where there is significant expenditure involved. In such instances, the Executive Committee (ExCom), Terms of Reference (TORs) will be consulted to determine if ExCom approval is required.

Senior Responsible Owners, Local Senior Coordinator(s) and/or Office Manager(s) are responsible for reporting security incidents, losses, vulnerabilities and weaknesses.

The constantly changing security landscape dictates that physical security measures must be constantly re-evaluated (at least annually) in order to meet new threats and other emerging vulnerabilities.

This policy and subsequent supporting standards will be subject to annual review or more frequently if warranted.

CPNI

The Centre for the Protection of National Infrastructure (CPNI) works with a variety of partners to identify risks and to reduce the vulnerability of the national infrastructure, focusing on critical national infrastructure (CNI). Key partners include Government Departments and other security specialists such as the Police and the National Counter Terrorism Security Office.

HMG Security Policy Framework

The HMG framework describes how government organisations and third parties handling government information and other assets will apply proportionate protective security measures.

Security - Information Security Management System (ISMS) Requirements

As part of the Information Security Management System (ISMS), the following areas will be identified and managed for each Insolvency Service site: Fire Door Monitoring, Fire Alarm Monitoring, Burglar Alarm Monitoring, Reception Area, Public Access, Equipment Security, Fire Suppression, Air Conditioning, Standard Configuration, Secure Media Disposal, Physical Security Perimeter.

Responsibility for managing, maintaining and testing must be agreed with all applicable parties; this includes, landlords, co-tenants, sub-lets and facilities management (FM) service providers.

DEFINITIONS

“Risk Categorisation” refers to the building risk category (Low, Medium or High) as detailed in the SPF [Physical Security Design Principles](#) document.

“Shall” means that there is an obligation to have the measure in place.

“Should” means that there is an expectation that the measure is considered or is put in place during a security upgrade. There may be exceptions however, there must be a clear process in place to manage any risks and reasons for not complying or alternative measures recorded.

“Departments” also refers, to organisations, agencies and Arms Length Bodies.

“Staff” also refers, to contractors/facilities providers.

“Asset” can refer to physical items, the building, data and people.

Purpose: a specification for the layered security measures expected to be delivered as standard at a government occupied building.

Physical Security Site Protection Principles

Physical Security - Site Protection Principles

Physical security describes measures designed to ensure the protection of assets (an item of value) this could include; facilities, equipment, personnel, resources and other properties.

Principles - Deter, Detect, Delay, Mitigate and Response

Deter

Minimise the awareness of the asset within the organisation and the local area
Dissuade adversaries from conducting an attack by emphasising the likelihood of failure and capture

Project a sufficiently hostile view of the environment to an adversary so as to make an attack difficult or too unachievable to progress

Detect

To identify threat or attack behaviours at every stage of an attack – planning, reconnaissance, deployment

Initiate an appropriate response to a threat or attack as early in the attack timeline as possible

Delay

Maximise delay through the use of approved security measures

Limit the information on security measures and use multiple varied protective security measures

Take measures to minimise the impact of an attack on the asset

Mitigate

Use of protective security measures to minimise the impact of any attack

Ensure that protective security measures are commensurate around the asset

Ensure that physical measures reduce the impact of a successful attack
