

Vertical 90°

Angled

Option with bottom lip support

5mm thick frosted acrylic sheet.
Fixed either vertically or angled

Flat or angled section steel back bar, approx 10mm h x 5mm d. Width depends on where object rests as fixings into acrylic sheet need to be invisible. Neatly welded to vertical support

Tubular steel section, diam dependent on weight and size of object and mount. Keep as narrow as possible. Neatly welded to base plate

Base plate is rectangular steel - approx 10mm thick

All parts spray painted with appropriate RAL colour finish

TYPE A Freestanding
Used for flat objects, paintings, prints, medals, papers etc

Front view

Side view

Back view

Steel or brass claws, rings or cradle armature to capture object. NAM conservation team and mount maker to agree metal types

Tubular steel section, diam dependent on weight and size of object and mount. Keep as narrow as possible. Neatly welded to base plate

Base plate is rectangular steel - approx 10-15mm thick, dims depend on object size and weight/balance needed

All parts spray painted with appropriate RAL colour finish

TYPE B Freestanding
Used for complex shaped objects; rifles, swords, etc. Objects tend to be tall and/or large

Front view

Side view

Back view

Tubular steel section, diam dependent on weight and size of object and mount. Back and sides supported but front is kept clear. Keep as narrow as possible. Neatly welded parts

Base plate is rectangular steel - approx 10mm thick

All parts spray painted with appropriate RAL colour finish

TYPE C Freestanding
Used for unstable objects

Front view

Side view

Back view

Acrylic back plate cut to suit object dims. so that no acrylic is seen from the front.

Support fin or fins x 2 depending on object size
