TREE S	TREE SURVEY SCHEDULE													
Site	Willowbed Hall, Chickerell													
Date	4 October 2024													
Reference	Common Name	Height (m)	Stem Diameter (mm)	Crown Spread (m) compass points	Canopy clearance (m)	Height of lowest significant branch (m) and direction	Notes	Age Class	Physiological condition	Structural Condition	Remaining Contribution	BS 5837 category	Radial RPA (m)	Area RPA (m²)
1	Horse Chestnut	7.5	470	N4 E5 S3 W3	3	1 E	End tree in line along boundary of playing field. Two stems from 1m. Some included bark in the union - may require intervention in future. Primary scaffold limb growing towards bus stop immediately to the east.	early mature	fair	fair	30	B2	5.6	98
2	Horse Chestnut	6	260	N2 E3 S4 W4	2	2 S	Young tree - low, flat crown. Profusion of weak shoots within the crown suggesting very poor vigour. Poor shoot extension and leaf size in upper crown.	young	poor	fair	10	C2	3.1	30
3	Horse Chestnut	9.5	470	N3 E6 S4 W4	2	2	More dominant tree of the pair growing together. Two-stemmed from 1.5m - 500mm length bark inclusion, with some adaptive growth. Decayed branch stub at 2m - small amount of decayed bark associated with it. Overall, poor shoot extension, small leaf, small bud size, somewhat sparse crown generally.	early mature	poor	fair	10 - 20	B2	5.6	98
4	Hazel	6.5	m/s	N2 E2 S2 W1	1	-	Coppice hazel. Completely smothered in ivy. Possibly two separate stools. Characteristically multi-stemmed. Longevity will depend on management.	mature	fair	-	10+	C2	1.5 (est)	7
5	Willow (pollard)	5	1250	N1 E1 S1 W1	-	-	Large willow pollard, growing on a raised bank rear of the building -this will have modified the root run. Very substantially hollow. Has suffered some vandalism from fire started in cavity. Vigorous regrowth since last cut. Will need repollarding regularly to maintain appropriate level of safety.	mature	good	poor	10+	C3	3	28
6	Willow (pollard)	3	-	N1 E1 S1 W1	-	-	Couldn't obtain sensible stem diam measurement because of its form. Two stems - one to N with cavity. Sounding on E side at base suggests large hollow near ground level. As with its partner tree, this will need repollarding regularly to maintain appropriate level of safety.	mature	good	poor	10+	C3	3	28
