

## Clarification to criteria question

*AC3.3 Ability and willingness to support deinstallation and reinstallation project if needed. 20%*

We are at present undertaking a consultation to assess the future of Greenwood Park and its buildings. Part of the options we are looking at involve updating or replacing the community centre building. If the Council does decide to pursue this option, then the solar panels would need to be deinstalled and reinstalled on the new building. This criterion is to ascertain that your company would be able to support the de and reinstallation.

## Additional information

The park side of the roof panels should be optimized to enable a single panel replacement if damaged by cricket balls.
