Schedule 1: Services

The Supplier will implement Microsoft Azure Information Protection (API) and Data Loss Prevention (DLP) Design.

The phases of the work will be as follows.

Plan (Design) Phase

Discovery	<p>The Supplier will review the existing Microsoft 365 tenant configuration settings to gather information about the current deployed services, with a focus on configuration and usage of DLP, AIP, MCAS and related MIP technologies.</p> <p>OUTPUT</p> <ul style="list-style-type: none">• Discovery findings will feed into the design activities outlined in this proposal.
Microsoft Information Protection (MIP) Workshop and Concept	<p>The Microsoft Information Protection (MIP) workshop and output is designed to walk the client through the information protection lifecycle defined by Microsoft.</p> <ul style="list-style-type: none">• Discover• Classify• Protect• Monitor <p>During each stage of the lifecycle, the supporting technical concepts are explored comprehensively and focus is given to the client and service implementations of the Right Management Service. This includes file encryption, rights and expiration concepts of Information Rights Management as well as classification technologies and monitoring tools. The workshop is a full-day session, comprised of four-six hours of workbook content, with flexible time remaining for questions, discussion and advice.</p> <p>The concept document that follows aims to help pin down the intended use-cases for AIP and RMS, identify an initial tenant-scoped configuration for these technologies and identify the extent to which AIP and RMS capabilities will be integrated with related security features such as Microsoft 365 Data Loss Prevention (DLP).</p> <p>OUTPUT</p> <ul style="list-style-type: none">• MIP Concept Document

Policy Orchestration	<p>This planning activity brings specific business and security requirements to an organisation's intended technology models, with deep focus on the differing capabilities of Office 365 DLP rules, Exchange Online custom DLP rules, AIP Label/Policy configuration, and MCAS Governance Policies. This policy creation activity relies upon our standard conceptual activities for MIP, Advanced Data Governance and MCAS, integrating those foundational concepts with business logic for predictable enforcement of rules.</p> <p>Policy Orchestration is time-boxed on the basis that the Supplier will have no way to quantify how many policies might be needed up-front. To this end, activities are flexible to differing organisational priorities. In all cases the Supplier expects to run a planning workshop with security and compliance stakeholders to gather specific requirements, to describe the art of the possible and to sketch out provisional rules. The Supplier will also allocate time to test the intended configuration, to identify unexpected conflicts or side effects, and to clearly define rule priorities.</p> <p>Beyond this core planning activity, this flexible time can be used to produce a spreadsheet with script (where possible) or tabular configuration information where scripting options aren't appropriate, with a view to providing complete production rules, ready for implementation. It is also possible to produce written documentation, providing a definition of how the rule sets will complement each other, and the rationale for rule choices.</p>
-----------------------------	--

Prepare (Implementation)

Microsoft Information Protection and DLP Policies Deployment, Configuration and Integration	<p>The Supplier will implement agreed policies defined within the Microsoft 365 Advanced Compliance concept, Microsoft Information Protection concept and policy orchestration activities in a time-boxed implementation period. These policies will primarily affect the Microsoft 365 tenant, including Exchange Online, SharePoint Online, OneDrive for Business, Microsoft Teams and Endpoint DLP functionality.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • Microsoft 365 policies for DLP and MIP configured
Testing and Validation	<p>This activity will focus on the testing and validation of in-scope components to ensure that the solution works as designed.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • Testing and validation complete • Remediation actions performed

Handover Sessions	<p>The Supplier will provide the migration and business as usual training to the support desk and identified support documentation. This will cover the implemented services as specified within the design document and include the ongoing BAU tasks which IT support will need to perform after migration.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • IT Admin handover training sessions delivered (3 x sessions)
End User Guidance	<p>The Supplier will create guidance on DLP actions, sensitivity labelling, auto labelling and changes to system behaviour, preparing the business for the effects of the changes. The Supplier will also provide a recommended communications plan for internal customisation.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • Communications Plan and End-User Documentation
Technical Pilot	<p>The Supplier will perform a technical pilot of implemented technologies with nominated candidates within the IT project team prior to user deployment.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • Technical pilot complete
Production Environment Enablement	<p>After the successful pilot, user communications and integration with the monitoring solution, The Supplier will support the initial enablement of all policies into the production environment over a one-week period (part-time). During this phase the Supplier will provide project-based support from the implementation team to resolve early issues rapidly.</p> <p>OUTPUT</p> <ul style="list-style-type: none"> • Production Environment Enabled
