Documentation:

The API design and fields to be included have been agreed by the parties.

ESR-NHS0358 Doctors in Training Employment Checks API. **The following features will be included:**

- *Discovery & Planning*
- *Add Department settings to control which customers turn the new integration on.*
- *Get API / Matching / Sanity check details:*

- A script will run (frequency TBC) so Trac calls the GET API with each Doctors application in ESR.
- New application database tables will facilitate a matching process (i.e. between the application in Trac and ESR, this will cover existing matches, invalid matches, multiple matches)
- Sanity checks will take place. If a record that was previously matched is no longer matched, the script will send a comms message to the recruiter to inform them of this.
- There will be a STOP process.
- Once all employment checks have been completed and an applicant is moved to Outcome:recruited, employment check information will be exported to ESR from Trac using a Post API.
- User Interface changes – a variety of features will be added to admin.trac.jobs to display the ESR association/ link in Trac
 - There will be an extra tab on the application view page for "Deanery details". This will only show for employers who have the new integration turned on. This will list one of the following statuses:
 - This person has been matched to a deanery record in ESR
 - This person has not been matched to a deanery record in ESR
 - This person has multiple matches to a deanery record in ESR + Resolve button linking through to the "Manually selecting matches" page
 - This person was previously matched but match is now invalid - warning symbol
 - Date match last checked will also be shown
 - There will then be a status showing which employment checks have been exported for this person. This will be a list of checks . E.g. CHK check / IWC check / DBS check. There will then be a status showing which employment checks have not yet been exported for this person
 - We will show the ESR Dit Status on the application list page. This will only be shown for vacancies in a department that have DiT integration turned on. An extra column will be added title DiT. The possible values will be:
 - D - deanery record matched
 - U - no deanery record matched
 - M - Multiple deanery records matched
 - Extra information will be displayed on the vacancy details screen for deanery vacancies. This will only show for vacancies that are in a department that have ESR DiT integration turned on. This will show counts of:
 - how many apps matched
 - how many unmatched
 - how many no longer matched and how many matched multiple records
 - how many emp checks sent/emp checks confirmed
- A new application search/report for deanery data and ESR associations/links will be added with the following filters:
 - Employer / Department
 - Vacancy
 - Deanary status - multiple select of
 - Matched
 - Not matched
 - Previously matched

- *Multiple matches*
- *Employment check status / Starter task state*
 - *Any check is - in any state*
 - *Specific checks*
- *The report will have the following columns:*
 - *Applicationid*
 - *vacancyid vacancy name*
 - *applicant firstname*
 - *applicant lastname*
 - *deanary match status*
 - *all employment checks sent*
- Integration testing (i.e. expectation is that API instances will be provided for testing). We will need to itemise all scenarios to test and then run through a test plan.
- *Privacy & applicant PII:*
 - *Agreed to not include NINO as part of the identifiers returned by ESR to TRAC following the initial GET call. GMC number will still be returned where available.*
 - *If Trac does not hold any identifiers returned by ESR e.g. GMC number, this will not be merged with the TRAC dataset and stored, but would instead be used purely for matching purposes.*

Additional Deliverables

Additional Deliverables

- NHS ESR Authority Central Team to provide Civica with an updated spec by the ending of Jan-2022 elaborating on the design with any changes to the specification agreed via the Change Control Process.
- NHS ESR and Civica to engage in further conversations and investigations to determine whether the calls from TRAC will be to retrieve a list of all individuals within a VPD (employer) in a single list, or whether TRAC will call for specific individuals. There may be implications if a list for the whole VPD is returned in a single API event as this could result in very large volumes. Using the get-all calls on a regular basis instead of the changes call would in theory cause too much traffic. The current view is that the latest should be sent and it has been suggested to maybe include a date on the identifiers list returned.
- ESR to supply API key which will need to be included in every REST call along with Basic Auth credential.
- NHS ESR and Civica to align resources to deliver according to the timelines stated below
 - Dev & technical testing until the end of March 2022
 - Bug fix & contingency – April 2022
 - Integration testing – May/June 2022
 - Deployment – July 2022 (targeting the 5th)
