Schedule 1: Services

Epimorphics Ltd host, maintain and support a number of critical data services for the FSA, as part of the FSA data platform.

The FSA requires a continuation of the existing hosting and managed support of the following FSA Data Services:

1. the overarching Data Platform (including Proxy and DNS)
2. the Data Catalog and Editor (data.food.gov.uk/catalog)
3. the Codes (Registry) (data.food.gov.uk/codes) and specialised FoodEx2 registry (data.food.gov.uk/codes/ui/about-foodtypes)
4. the Food Alerts API and Editor (data.food.gov.uk/food-alerts/editor)
5. the Unified View - UI, API, SQL Connector and Data Store (internal-data.food.gov.uk)
6. the Regulated Products Register (data.food.gov.uk/regulated-products)
7. the CBD products on the market data

Data Services Support is to be comprised of:

1. Hosting - The services are hosted on Amazon Web Services (AWS) in a dedicated area for the FSA. Hosting charges will be passed on to the FSA as monthly in arrears as expenses. In addition, the FSA would look to reserve appropriate server instances as to minimise overall costs through the annual support period. AWS charges would comprise of bandwidth, load balancing, server usage (reserved and unreserved) and storage.
2. Support - This is per service, per month fees for the maintenance and security patching of the named services with the addition of support components as specified in the Epimorphics FSA / GCloud default service arrangements document.
3. Annual licence for the Data Platform / Data Management Service components.
4. In addition, the contract will contain some technical uplift components to continue a set of required changes, to align with longer term FSA needs, and to re-align the services into the newer DevOperational environment. These would be delivered monthly in arrears as a rate card based time and materials based activity.
Any Technical uplift contingency spend must be agreed between the FSA and Epimorphics in advance of any work beginning.

Epimorphics hosting and support comprises of three elements:

1. Regular maintenance
2. Monitoring and reporting
3. Incident response

These are described in the GCloud 12 documentation and our default (current) service provision document.

Improvements to Reference Data Platform:

From time to time the FSA will require project work to improve the reference data platform. There is up to £80,000 capacity in this contract to call off pieces of work, related to this work only, using the Work Package template included in Annex A.

This capacity will not be used to commission projects unrelated to improvements to the Reference Data Platform.

Assumptions:

Detail of the main assumptions we have made:

1. The FSA will maintain a stable governance lead that is able to take strategic decisions and understands the overarching principles of the work
2. The FSA works to reduce support burden with improved internal support documentation and named service ownership for each service
3. The FSA continues to fund and support their GitHub account and provides appropriate access and controls for ongoing CI based code hosting and version control
4. The FSA supports the use of and management of the per service issue ticketing on GitHub
5. Support is for existing data services that we supply and would be revised if there are any significant changes or additions
6. Support assumes a biannual review of support effort to assure the current effort is not significantly out of the expectations for the services
7. Hosting assumption is based on pass through charges (as in we only pass on the direct costs of hosting as we incur from AWS). The cost estimates are based on current service arrangements, usage and AWS server type availability.
8. Larger technical change (such as adding a connector to Azure Single Sign-on) would be run as a separate project (work-package)

Identified risks and proposed mitigation measures:

1. Critical security issues identified with core components.
 - We use industry good practice for identifying these and updating and patching software as required
2. Usage of services is significantly above expected.

- Services are built with resilience in place but additional service can be brought into the load balancers for each service as required at minimal notice.
3. Data Protection related data hosting rules are currently deemed as not requiring changes, If these change that may alter server location requirements.
- Currently Hosting is on AWS EU West 1 (Ireland), a Future requirement to EU West 2 (London) will have cost implications (AWS currently charge a slightly higher rate for equivalent servers), the migration activity costs and an impact on the Carbon Footprint of the Energy Use (AWS Ireland is net-zero, while London is yet to meet that goal).
 - Currently there is no data held on the servers or planned that requires a move (this is assessed regularly)
4. Current server type / sizes may not be available over time and choices on availability may alter the underlying costs.

Schedule 2: Call-Off Contract charges
