Statement of Requirements

STATEMENT OF REQUIREMENT FOR A QUANTITATIVE SWEAT MEASUREMENT SYSTEM

1. Requirement

Following the investigation into another heat related death in Service personnel, the Coroners report to prevent future deaths, reported a serious concern that lessons have not been learnt from past tragedies and that there appears to be a failure to address serious safety concerns on the part of the MOD.¹ One of the six areas of recommendations in the coroners report focused on improving the understanding of exertional heat illness and specifically the identification of individual risk factors. Specifically the report states that “individual risk factors are an important part of understanding how a soldier will react to a situation and how best to mitigate any associated risk. At present there is no clear system in place to ensure those conducting activities have the necessary information about an individual to enable them to carry out an appropriate risk assessment.”

INM is undertaking a programme of work to improve the understanding of individual risk factors in the development of exertional heat illness. One of the strands of work involves investigating the influence of muscle damaging exercise on heat illness risk, and this work (tasked by the MOD Heat Illness Working Group) will be conducted at INM. To fulfil this requirement it is imperative that the thermoregulatory response is measured accurately and in a reproducible manner. Quantification of the local sweating response is an important measurement and must be measured in accordance with the MOD Research Ethics Committee approved protocol (MODREC 955/19).

A method of measuring local sweat rate is required. Some researchers have designed and built bespoke systems, however their work has focused solely on the sweating response. For the INM work, localised sweat rate is only one of a number of measurements and as such an on-line, robust, accurate, reliable and easy to use system is required.

Further to the above work, equipment to measure local sweat rate is required to explore the procedures used in the INM Heat Illness Clinic (HIC). The purpose of the HIC is to assess whether service personnel who have suffered an episode of heat illness have recovered from the episode and can return to Operational duties; the HIC procedure also aims to determine whether an individual can thermoregulate normally or if they have an underlying intolerance to exercise and heat. Each year 100-140 patients are reviewed in the INM HIC. Further work into the procedures undertaken in the HIC is necessary to ensure that the procedures used are shown to be optimal according to scientific evidence and cannot be subject to criticism or dismissal.

2. Statement of Requirement

It must be designed for quantitative measurement of local sweat rate.

It must measure sweat output based upon direct measurement of vapour pressure.

The software must convert the vapour pressure measurements into sweat output in litres (or

nanolitres) per minute.

It must have a measurement range 0-1700 nanolitres per minute.

It must display output data on a screen in real time.

It must be supplied with capsules that cover only a small area (0.6-1.0 cm²).

It must be possible to locate the capsules on the back, arms, chest or forehead.

It must record and save the data.

It must be possible to transfer the saved data into excel.

It must have a warning system to show when a capsule is leaking.

It must be robust and capable of being used on an individual exercising in a static location (eg. Treadmill or cycle ergometer).

It must be possible for the user to check the calibration in-house.

It must have an accuracy of $\pm 5\%$, repeatability of $\pm 5\%$, and sensitivity of 0.1 nanolitres per minute.

It must be CE marked.

3. The above specifications must be met by any proposed equipment.

4. It is requested that the equipment is supplied as soon as possible.

5. There are no Security considerations with the procurement of this equipment.

6. The system is operated by the accompanying software that will be installed on a MOD laptop, and the software must be capable of transferring the data into excel. The excel data file should then be removable from the laptop using a USB stick.

7. Standard UK plug.

8. A certificate of CE is registration is required.
