Schedule 1: Services

The expectation is that the agreed ways of working applied in previous Supplier engagements on this Programme will carry forward, adjusted as necessary for the reduced scope and current deliverables.

Exit Identity - Requirements

Position:

- Main Outcome: Remove the link to the quantum identity in order to exit the Legacy DXC EUCS contract.
 - This will allow for the user id's to be removed from DXC and migrated to MoJO identities any related infrastructure can then be decommissioned.
 - This work is a dependency on the Exit from the EUCS contract with DXC and must be completed by close of 2022.
- Business and Technical Policies:
- The user needs, policy and processes will need to be understood as this is complex as the technical design for the revised identity structure.
- Risk Mitigation:
 - There will be a need for soft close and for engagement with a number of external suppliers and a clear test plan to be agreed. This mitigates the risk associated with operational prisons and access to the Line of Business Apps and Secure apps that are linked to this identity

Capability and Capacity Product Management understanding the user journey and requirements would strongly support the Delivery, due to the volume of use cases and processes involved.

- That support would initially require business analysts to complete
 - step 1: discovery and
 - step 2: process agreement.
- These are laid out in more detail In SOW001 appended
- The programme will provide Delivery Management to ensure that
 - the product team are aligned with wider work across HMPs and MOJ D&T due to the number and spread of collaborators and stakeholders.
 - The product and user based roles will own the discovery, requirements, process agreement and revised approach to future process for Joiners, leavers, and movers.
 - The product team to enhance their understanding of the user group and
 - be able to demonstrate a recent/current knowledge of the domains existing in DXC/MOJ.

SOW Acceptance Criteria process:

1. Supplier shall propose quantifiable Deliverable Acceptance (Success) criteria for each Deliverable in each SOW. Buyer shall review and either confirm or reasonably revise the proposed acceptance criteria (such confirmation or review not to be unreasonably withheld or delayed). Supplier shall record the confirmed and/or revised acceptance criteria (the 'Acceptance Criteria'), or such Acceptance Criteria shall be specified within the Statement(s) or Work.

Deliverable Acceptance Process:

2. On the Supplier meeting the Acceptance Criteria or conclusion of delivery, and following successful completion by the Buyer of its standard assurance process for the specific delivered outcome or group of related outcomes, the Buyer shall issue to the Supplier a Completion Certificate (Authorised by the relevant Service Delivery Manager and/ or other appropriate Buyer Representative) as indication of a delivery that meets the quality criteria and appears fit for purpose. This will be considered as the Supplier's Authority to Proceed to invoice for services rendered in line with the contractual invoicing process.
3. Either party may request a variation through CCN of the applied capacity, values and RAID content in either direction should the Risk profile be increased or reduced following clarification from the initial understanding, such variation to be by Agreement.

Statement of Work 1 (SOW001)

Operational Assumptions:

- Programme Run / DAA reduced team to work out to the end of September 2022 on separate contractual arrangements.
- Programme Run – Assurance across the Data Hub Processes and Control Room Processes are needed for deployment and are new or defined requirements and would form a separate requirement / commercial agreement following the SOW005 Scope in the original contract

Dependencies:

Dependencies

The Quantum identity can only be removed once all the services that are currently reliant on the Quantum identity have alternative solutions.

The identity workstream is dependent on the following programme deliverables

- Commercial agreements in place with ATOS to utilise DOM1 as the primary account for new joiners
- The PTPP service team to ensure the user app request and fulfilment is built on the MOJO service catalogue
- Safecom print service migrated to an alternative non quantum solution
- If early decommissioning of Quantum identities is required (mitigate big bang approach) a commercial and technical agreement with ATOS is required to decouple of the DOM1 sync with Quantum
- provide access to and necessary input from Service Delivery leads (deployment, technical, service) and appropriate suppliers. This will include data, information and relevant artefacts in appropriate formats in a timely fashion for agreed reporting, reviewing and assurance deliverables, including policy and strategy documentation once developed and agreed.
- Ensure that the Run and Maintain team will be made available and has the appropriate skill sets and capacity to enable the Identity team to provide an effective handover, including a. The Identity team will provide handover to this new team.

[REDACTED]

The Supplier will provide any necessary evidence in support of the achievement of these deliverables upon request.

- The Legacy provider may be instructed to decommission of User Accounts can be done with no Identity risk
