3. How the Contract works

3.1 The Order Form is an offer by the Authority to purchase the Deliverables subject to and in accordance with the terms and conditions of the Contract.

3.2 The Supplier is deemed to accept the offer in the Order Form when the Authority receives a copy of the Order Form signed by the Supplier.

3.3 The Supplier warrants and represents that its Tender Submission and all statements made and documents submitted as part of the procurement of Deliverables are and remain true and accurate.

4. What needs to be delivered

4.1 All Deliverables

(a) The Supplier must provide Deliverables: (i) in accordance with the Specification and Tender Submission; (ii) to a professional standard; (iii) using all reasonable skill and care; (iv) using Good Industry Practice; (v) using its own policies, processes and internal quality control measures as long as they don't conflict with the Contract; (vi) in accordance with such policies and procedures of the Authority (as amended from time to time) that may be specified in the Contract (vii) on the dates agreed; and (viii) in compliance with all applicable Law.

(b) Without prejudice to the Specification the Supplier must provide Deliverables with a warranty of at least 90 days (or longer where the Supplier offers a longer warranty period to the Authority) from Delivery against all obvious damage or defects.

4.2 Goods clauses

- (a) All Goods Delivered must be capable of meeting the requirements set out in the Specification and be either (i) new and of recent origin, (ii) reused or (iii) recycled.
- (b) All manufacturer warranties covering the Goods will be assigned to the Authority on request and for free.
- (c) The Supplier transfers ownership of the Goods on completion of Delivery (including off-loading and stacking) or payment for those Goods, whichever is earlier.
- (d) Risk in the Goods transfers to the Authority on Delivery but remains with the Supplier if the Authority notices any damage or defect following Delivery and lets the Supplier know within three Working Days of Delivery.
- (e) The Supplier must have full and unrestricted ownership of the Goods at the time of transfer of ownership.
- (f) The Supplier must Deliver the Goods on the date and to the specified location during the Authority's working hours.
- (g) The Supplier, its subcontractor(s) and supply chain must minimise packaging used whilst providing sufficient packaging for the Goods to reach the point of Delivery safely and undamaged. The Supplier must take back any primary packaging where it is possible to do so. Packaging must be 100% re-usable, recyclable or compostable, use recycled content where reasonably practicable and support the Government's commitment to eliminate single use plastic.
- (h) All Deliveries must have a delivery note attached that specifies the order number, type, quantity of Goods, contact and details of traceability through the supply chain.
- (i) The Supplier must provide all tools, information and instructions the Authority needs to make use of the Goods. This will include, where appropriate, any operation manuals which, unless specified otherwise, will be written in English and provided in electronic form.
- (j) The Supplier will notify the Authority of any request that Goods are returned to it or the manufacturer after the discovery of safety issues or defects that might endanger health or hinder performance and shall indemnify the Authority against the costs arising as a result of any such request. Goods must be disposed of in line with the waste management hierarchy as set out in Law. The Supplier will provide evidence and transparency of the items and routes used for disposal to the Authority on request.

(k) The Authority can cancel any order or part order of Goods which have not been Delivered. If the Authority gives less than 14 calendar days' notice then it will pay the Supplier's reasonable and proven costs already incurred on the cancelled order as long as the Supplier takes all reasonable steps to minimise these costs.

(l) The Supplier must at its own cost repair, replace, refund or substitute (at the Authority's option and request) any Goods that the Authority rejects because they don't conform with clause 4.2. If the Supplier doesn't do this it will pay the Authority's costs including repair or re-supply by a third party.

(m) The Authority will not be liable for any actions, claims, costs and expenses incurred by the Supplier or any third party during Delivery of the Goods unless and to the extent that it is caused by negligence or other wrongful act of the Authority or its servant or agent. If the Authority suffers or incurs any damage or injury (whether fatal or otherwise) occurring in the course of Delivery or installation then the Supplier shall indemnify from all losses, damages, costs or expenses (including professional fees and fines) which arise as a result of or in connection with such damage or injury where it is attributable to any act or omission of the Supplier or, where related to the Contract, any of its subcontractors or suppliers.

4.3 Services clauses

(a) Late delivery of the Services will be a breach of the Contract.

(b) The Supplier must co-operate with the Authority and third party suppliers on all aspects connected with the delivery of the Services and ensure that Supplier Staff comply with any reasonable instructions including any security requirements.

(c) The Authority must provide the Supplier Staff with reasonable access to its premises at such reasonable times agreed with the Authority for the purpose of supplying the Services.

(d) The Supplier must at its own risk and expense provide all equipment required to deliver the Services. Any equipment provided by the Authority to the Supplier for supplying the Services remains the property of the Authority and is to be returned to the Authority on expiry or termination of the Contract.

(e) The Supplier must allocate sufficient resources and appropriate expertise to the Contract.

(f) The Supplier must take all reasonable care to ensure performance does not disrupt the Authority's operations, employees or other contractors.

(g) On completion of the Services, the Supplier is responsible for leaving the Authority's premises in a clean, safe and tidy condition and making good any damage that it has caused to the Authority's premises or property, other than fair wear and tear and any pre-existing cleanliness, safety or tidiness issue at the Authority's premises that existed before the commencement of the Term.

(h) The Supplier must ensure all Services, and anything used to deliver the Services, are of the required quality and free from damage or defects.

(i) The Authority is entitled to withhold payment for partially or undelivered Services or for Services which are not delivered in accordance with the Contract but doing so does not stop it from using its other rights under the Contract.

5. Pricing and payments

5.1 In exchange for the Deliverables delivered, the Supplier shall be entitled to invoice the Authority for the charges in Annex 3. The Supplier shall raise invoices promptly and in any event within 90 days from when the charges are due.

5.2 All Charges:

(a) exclude VAT, which is payable on provision of a valid VAT invoice and charged at the prevailing rate;

(b) include all costs connected with the supply of Deliverables.

5.3 The Authority must pay the Supplier the charges within 30 days of receipt by the Authority of a valid, undisputed invoice, in cleared funds to the Supplier's account stated in the Order Form.

(a) includes all appropriate references including the Purchase Order Number and other details reasonably requested by the Authority as set out in Annex 3; and

(b) includes a detailed breakdown of Deliverables which have been delivered (if any).

Details of the Authority's requirements for a valid invoice at the Start Date are set out in Annex 3.

5.5 If there is a dispute between the Parties as to the amount invoiced, the Authority shall pay the undisputed amount. The Supplier shall not suspend the provision of the Deliverables unless the Supplier is entitled to terminate the Contract for a failure to pay undisputed sums in accordance with clause 11.6. Any disputed amounts shall be resolved through the dispute resolution procedure detailed in clause 35.

5.6 If any sum of money is recoverable from or payable by the Supplier under the Contract (including any sum which the Supplier is liable to pay to the Authority in respect of any breach of the Contract), that sum may be deducted unilaterally by the Authority from any sum then due, or which may become due, to the Supplier under the Contract or under any other agreement or contract with the Authority. The Supplier shall not be entitled to assert any credit, set-off or counterclaim against the Authority in order to justify withholding payment of any such amount in whole or in part.

5.7 The Supplier must ensure that its subcontractors and supply chain are paid, in full, within 30 days of receipt of a valid, undisputed invoice. If this doesn't happen, the Authority can publish the details of the late payment or non-payment.

6. The Authority's obligations to the Supplier

6.1 If the Supplier fails to comply with the Contract as a result of an Authority Cause:

- (a) the Authority cannot terminate the Contract under clause 11 on account of the failure to comply, provided this will not prejudice the Authority's right to terminate for another cause that may exist at the same time;
- (b) the Supplier will be relieved from liability for the performance of its obligations under the Contract to the extent that it is prevented from performing them by the Authority Cause and will be entitled to such reasonable and proven additional expenses that arise as a direct result of the Authority Cause;
- (c) the Supplier is entitled to any additional time needed to deliver the Deliverables as a direct result of the Authority's Cause;
- (d) the Supplier cannot suspend the ongoing supply of Deliverables.

- (b) demonstrates that the failure only happened because of the Authority Cause;
- (c) has used all reasonable endeavours to mitigate the impact of the Authority Cause.

7.4 The Supplier must provide information to the auditor and reasonable co-operation at their request.

- (a) tell the Authority and give reasons;
- (b) propose corrective action;
- (c) agree a deadline with the Authority for completing the corrective action.

7.6 If the Authority, acting reasonably, is concerned either:

- (a) as to the financial stability of the Supplier such that it may impact on the continued performance of the Contract; or
- (b) as to the sustainability or health and safety conduct of the Supplier, subcontractors and supply chain in the performance of the Contract;

then the Authority may:

- (i) require that the Supplier provide to the Authority (for its approval) a plan setting out how the Supplier will ensure continued performance of the Contract (in the case of (a)) or improve its sustainability conduct or performance (in the case of (b)) and the Supplier will make changes to such plan as reasonably required by the Authority and once it is agreed then the Supplier shall act in accordance with such plan and report to the Authority on demand
- (ii) if the Supplier fails to provide a plan or fails to agree any changes which are requested by the Authority or materially fails to implement or provide updates on progress with the plan, terminate the Contract immediately for material breach (or on such date as the Authority notifies).

8.4 The Supplier must provide a list of Supplier Staff needing to access the Authority's premises and say why access is required.

10. Intellectual Property Rights (IPRs)

10.1 Each Party keeps ownership of its own Existing IPRs. The Supplier gives the Authority a non-exclusive, perpetual, royalty-free, irrevocable, transferable worldwide licence to use, change and sub-license the Supplier's Existing IPR to enable it and its sub-licensees to both:

35.3 Unless the Authority refers the dispute to arbitration using clause 35.4, the Parties irrevocably agree that the courts of England and Wales have the exclusive jurisdiction to:

- (a) determine the dispute;

(b) grant interim remedies;

(c) grant any other provisional or protective relief.

35.4 The Supplier agrees that the Authority has the exclusive right to refer any dispute to be finally resolved by arbitration under the London Court of International Arbitration Rules current at the time of the dispute. There will be only one arbitrator. The seat or legal place of the arbitration will be London and the proceedings will be in English.

35.5 The Authority has the right to refer a dispute to arbitration even if the Supplier has started or has attempted to start court proceedings under clause 35.3, unless the Authority has agreed to the court proceedings or participated in them. Even if court proceedings have started, the Parties must do everything necessary to ensure that the court proceedings are stayed in favour of any arbitration proceedings if they are started under clause 35.4.

35.6 The Supplier cannot suspend the performance of the Contract during any dispute.

35.7 The provisions of this clause 35 are without prejudice to the Authority's right to terminate or suspend the Contract under clause 11.

36. Which law applies

36.1 This Contract and any issues arising out of, or connected to it, are governed by English law.

36.2 The courts of England and Wales shall have jurisdiction to settle any dispute or claim (whether contractual or non-contractual) that arises out of or in connection with the Contract or its subject matter or formation.

Annex 2 – Specification

1.0 Scope of Tender

1.1 The Supplier shall deliver the following:

To undertake the work on the ground there are a number of activities required to deliver the project and meet project aims. The project will deliver habitat improvement across the site through a number of activities. The main aim is to repair and restore the peat hydrology to maintain peat water levels at a height suitable to achieve active peat growth.

The main activities to achieve this are:

- Removal of trees and scrub from the site to reduce evapotranspiration water loss.
- Manage the tussocky vegetation across the site.
- Restrict water loss in all man-made drains across the site to reduce surface and sub-surface water loss from the peat resource.
- Restrict water loss across areas of slope to reduce surface and sub-surface water loss from the peat resource.
- Manage water flows across the site using weirs and dams

Each technique will aim to achieve the main objective with a number of measurable outcomes to determine success, these are:

- Re-hydrate the peat surface to achieve general raise in peat water levels to within 10cm over 90% of the restoration area within 5 years.
- To re-hydrate the acrotelm to create suitable conditions for active peat forming vegetation within 10 years.
- To re-hydrate the peat surface to allow for the laying down of new peat layers within 25 years.
- To encourage the growth and colonisation of Sphagnum species within the ditch network within 5 years.
- To encourage the growth of Sphagnum species, especially hummock and carpet forming species, or appropriate fen peat forming species, on the peat surface (beyond the ditches) within 15 years.
- Removal of dominant vegetation creating negative evapotranspiration affects over 90% of the restoration area (e.g., dense heather, dense scrub or trees)
- To remove vigorous non-peat forming vegetation across 90% of the restoration area within 10 years (e.g., dense heather or *Molinia caerulea*).

1.2 The work must be delivered between November 2023 and February 2024 inclusive. See Appendix A for full specification and drawings.

1.3 The Supplier shall provide labour, welfare facilities, materials, and expertise to complete the work as detailed in Appendix A.

1.4 The Supplier shall work closely with Natural England site managers and project staff to ensure the construction meets the needs of Natural England and the brief provided.

- 1.5 The Supplier shall adhere to the Construction Design and Management (CDM) Regulations 2015 at all times when operating on the site.
- 1.6 This tender will be on a fixed price basis.
- 1.7 The Supplier shall also include advice on materials used to meet the requirements of the project.
- 1.8 The Supplier will be required to attend regular project meetings to update Somerset Wildlife Trust on progress. Some meetings will be required to take place on site.

APPENDIX A

Design Specifications and Drawing

Please note this Contract is only for:

- **Shapwick Area 2, please disregard Area 1 as this work has already been completed. Please see Appendices B & C for diagrams that go with the specification.**

For drawings and maps please see Appendices B & C for detail and specified methodology.

1. Dense Tree Removal

- 1.1 Dense trees are located across much of the project areas at both sites, please see accompanying maps for details. All are considered self-sown trees and natural regeneration. These trees link with other deciduous woodland/trees adjacent to the work area. The trees are considered about 40-60 years old, and the mature trees have girths varying from 250-550mm. There are other dense trees growing in dense stands with the trees about 20-30 years old and a general girth of 100mm to 200mm.
- 1.2 At Shapwick Heath the proposal is to remove trees growing on peat habitat but leaving a small perimeter to act as a visual screen. The total area of tree removal Area 2 is about 3.60Ha (Figure 5.2 shows the tree cover areas.)

The treatment specification includes:

- Dense tree removal - Cut trees down to ground level and leave arising's/tree residue in situ. Remove timber over 150mm from site. Mulch tree arisings and other scrub and vegetation. Mulch vegetation to ground level and mulch residue to be left on the ground. Machinery should be wide tracked, low ground pressure to ensure these can travel across the peat surface and reduce risk of bogging down.

2. Scrub & tussocky removal and management

- 2.1 Scattered scrub and tussocky vegetation are present across the site outside of the dense trees. The scrub is a mix of birch, willow, bog myrtle, gorse and bramble. The dense tussocks are mainly Molinia, heather or rushes. The scrub ranges from 1m to 5m high. The scrub appears to be surviving and will in time continue to grow and dry out the peat surface. The tussocky vegetation is restricting the peat forming vegetation from growing and colonising the peat habitat. The scrub removal and tussocky management should be focused on the areas shown in Appendices B & C. The total area for Area 2 is approximately 7.5Ha (Figure 5.2 shows the location of the scattered scrub and tussocky vegetation).
- 2.2 The treatment specification includes:
 - Scattered Scrub & tussocky vegetation - Generally light scrub or small trees about 1m-5m tall growing across the site within tussocky hummocks of Molinia, heather or

rushes. Using a mulcher machine, working off wide tracks, mulch to ground level all scrub and tussocks. Leave arisings on the ground (note these will breakdown over time and not restrict the growth of Sphagnum after re-wetting). The mulching will also remove obstacles for the tracked machines that are required to undertake the peat bund re-wetting which is the best technique for a former forestry or scrub site. Without mulching, the stumps and roots would impede the installation of the bund and digging the borrow pit. Also following re-wetting, when the water table rises the mulching removes the tussock ridges created by the dry peat surface and therefore removes high spots for future trees to grow (even after re-wetting). This technique has been undertaken on a number of similar sites with very good success.

- Some areas of scrub will be retained as habitat to allow for preservation of resident protected species – (to be confirmed on the ground and marked with tape prior to work commencing)

3. Re-wetting Techniques & Access

3.1 There are man-made ditches, access ditches and evidence of former peat cutting across the whole of the site. The main access ditches down the centre of the site are one of the main water loss features, creating a low valley and dry area. To reduce the drying effect of these features a number of re-wetting techniques will be employed. Each re-wetting technique will be used at each location to revert a specific on-site drainage issue. The location of each proposed technique is shown in Appendix B within the re-wetting proposal maps for Shapwick Heath Area 2.

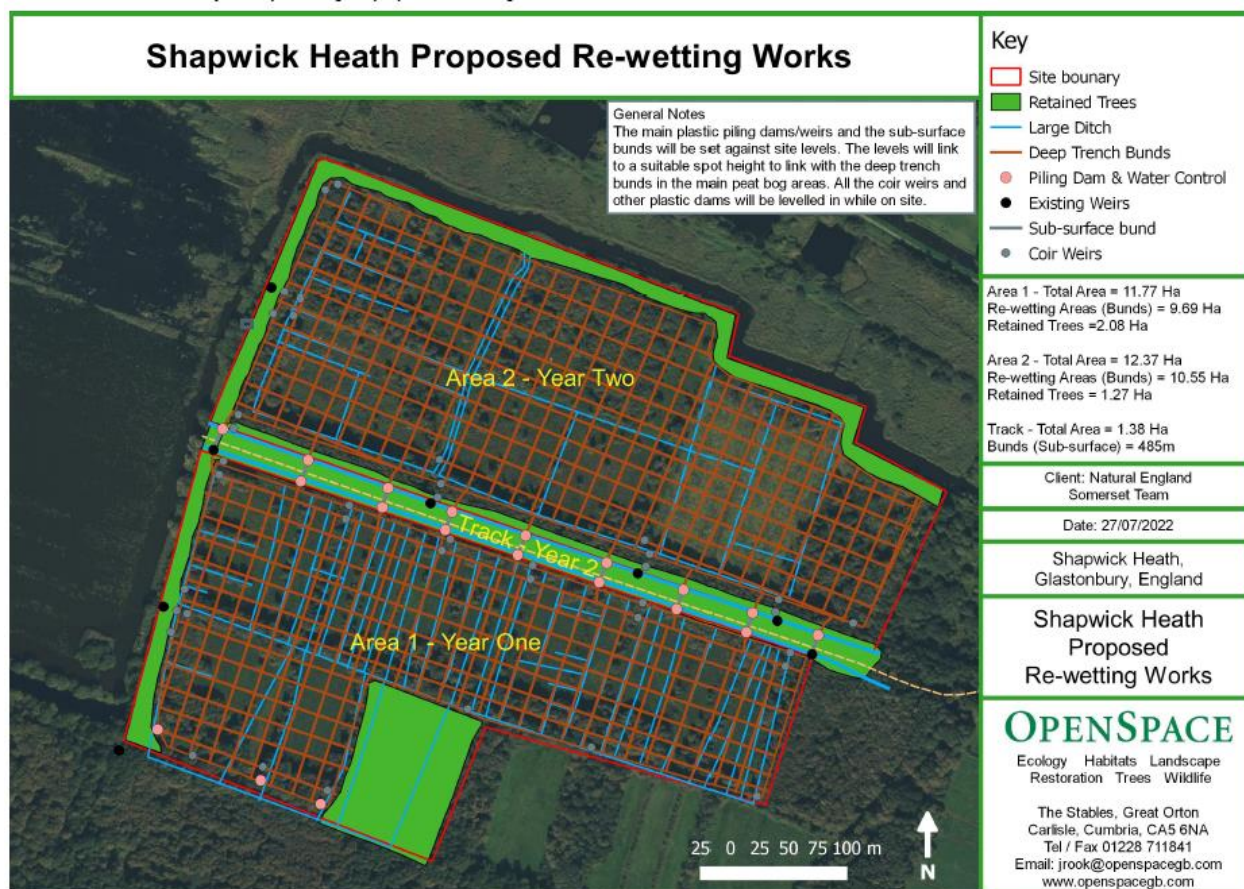

3.2 The re-wetting treatment specification includes:

- Peat bunds using the deep trench technique to slow surface flow and restrict sub-surface flow. These will link to other features such as plastic piling dams and existing sluices. Bunds will be dug down about 1.5m average depth but trial digs will be required to check peat depth. Where peat is less than 1m the aim would be to key the deep trench to the underlying mineral substrate. These bunds will have a low top bund to slow up surface flow within the site top bunds to be approximately 30cm high.
-
- Peat dams – installed in small drains linked to the peat bunds.
- Plastic piling dams with a weir section and supported by peat. These to be installed at a number of locations with the aim to hold back and manage the ditch water.
- Ditch infilling and pulling down the steep sided sides. Along the length of the access ditches reduce the depth of the ditch. This will re-connect the peat surface to the ditch and reduce the depth of the ditch. This will improve the conditions for Sphagnum growth in the ditch following re-wetting.
- Coir weirs – supply and an install coir matting/weirs over deep trench top bund (coir matting installed with pegs to hold in place) where needed to prevent erosion. Set a

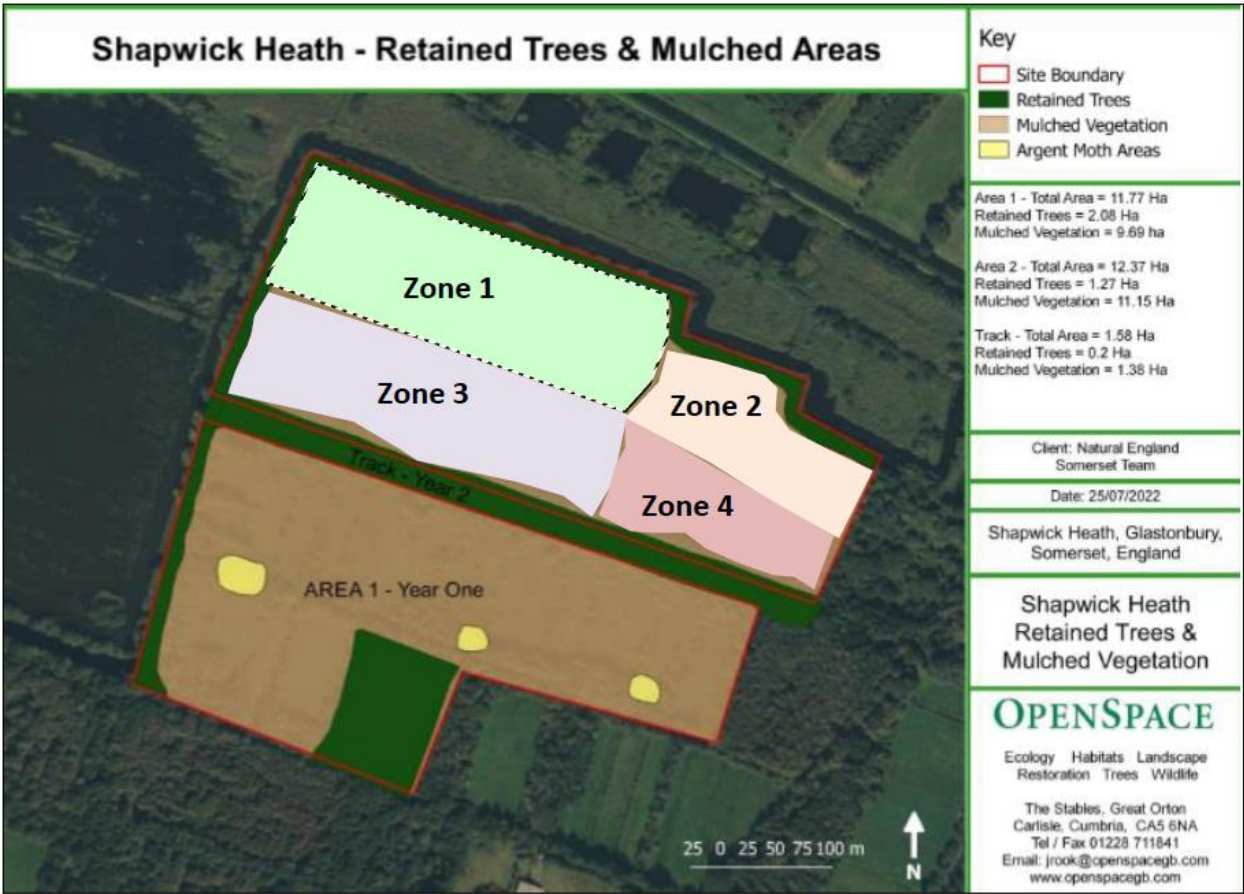

level to ensure the water is managed and water flows over the coir. Allow enough coir to go past the end of the bund.

- 3.3 NOTE: exact location of features will need to be determined on the ground at the start of the installation process. The supplier may need to use levelling equipment to assess the best location for bunds based on changes in topography.
- 3.4 With regard to Historic Environment features, the likelihood of encountering any features in any of the project areas is considered to be low. Contractors and sub-contractors will however be required to attend a toolbox talk on the historic environment and notify site staff if any potential archaeology is encountered.
- 3.5 All machinery used for the project must have low ground pressure tracks fitted to enable work on wet ground and reduce damage to the peat soils through tracking. Tilt rotator heads on excavators are desirable to reduce tracking whilst creating trench bunds.

Annex 5 - Sustainability Requirements

The items below cover the key parts of the Suppliers Bio-security policy as per their tender submission.

Environment/Pollution Prevention Measures

All works will be in accordance with the agreed contract and OpenSpace follow Environment Agency guidelines. Our fuel management procedure and process is shown below.

- OpenSpace will follow strict environmental management procedures.
- All sensitive habitats including watercourses and wet peat will be identified.
- Adhere to dedicated/marked routes at all times to reduce damage to the sensitive habitat.
- All machinery will be inspected before operation.
- Oil, fuel and chemical stores will be stored within a secured bund capable of storing an excess amount than necessary.
- Ensure all machinery is free from oil and/or hydraulic leaks prior to work commencing. Any leaks to be repaired before work commences. Daily checks will be carried out by machine operators.
- OpenSpace operate Bio-hydraulic oil in all plant machinery. This reduces the risk of contamination of habitats.
- A fuel spill kit is located in each plant machine with additional spill kits available in the road vehicles.
- Fuel spill kits will be inspected and maintained daily and will be sufficient to deal with any accidental spillages of fuel, oil or other pollutants.
- Any fuel spillages will be reported to the Natural England Site Officer.
- All waste will be disposed of in a designated waste area.
- Fuel will only be stored in the site compounds in correctly constructed tanks and containers. These will be kept closed and locked when not in use.
- All re-fuelling will be carried out over a drip tray and well away from drains and as far away as possible from any sensitive part of the site.
- All plant will be well maintained in a clean condition.
- Plant will be effectively silenced and comply with the Control of Pollution Act 1974.
- Noise and dust pollution will be monitored and measures taken to reduce it if levels are too high.

OpenSpace machinery is always cleaned prior to mobilising to any site. To add extra precautions, we undertake the following:

- Prior to entering the site all equipment for use in and around the peat bog will be disinfected and cleaned using a suitable disinfectant (Virkon S), rinsed and then left to dry.
- All disinfecting operations will take place at sufficient distance from the watercourses so that no disinfectant or contaminated water can enter the watercourse.
- All equipment will be thoroughly cleaned and disinfected before use at another site.
- All disinfecting will follow DEFRA guidelines as per specification.

We can also confirm the machines have not been working in areas with invasive weeds and therefore will not bring in any unwanted plants.

OpenSpace Fuel Management & Safety Equipment

OpenSpace manage the delivery and use of fuel on site by the following procedure:

1 All fuel delivered to site is from a UKIFDA/FPS fuel supplier who uphold the relevant Code of Practice. All fuel is delivered into the site by their double bunded fuel wagons. Management of delivers will be undertaken by the site supervisor and the wagon will arrive at a designated site.

2 The delivered fuel will be pumped directly into OpenSpace's onsite fuel bowser from the wagon using a shut off fuel nozzle and hose delivery. Spill kits will be next to the tank if there is a small spill but this is unlikely due to the nozzle going into the tank.

3 All fuel stored onsite will be stored in the double skinned fuel bowser which will be located in a designated location away from any open water courses or drains. The tank will be easily accessible and a full spill kit with spill tray will be with the fuel tank.

4 During fill of machines or secondary fuel bowser there will be a spill kit on site and a note of the fuel used will be taken. This to allow management of fuel and fuel levels.

5 Other machine specific procedures are:

Fuel Spill Kit with Softrak/Argo Cat

There are extra pads and rolls to ensure even a large spill can be contained.

All used items are placed in a plastic bag and kept in the secure spill kit bin.

We have a record sheet for fuel/oil spills and this is maintained in the site file.

Diggers/Mulcher/Softrak Fuel Spill Kit

Each machine has a fuel spill kit in the cab with a minimum of 5 pads and 2 rolls. We also have 2L Fire Extinguishers in each machine & Softrak.

The tractor has its own built in Fuel delivery pump and hose. This can be placed directly in to the fuel store and removes the need for cans and funnels.

During each fuel fill there are two spill rolls and one pad placed around the hose area. On filling the operator ensures there are no leaks or spills. Any drips are caught in the fuel spill kit pads.

Before removing the hose nozzle from the fuel tank the operator ensures the fuel has stopped and the nozzle are clicked in to the closed position. The hose and nozzle are safely placed back on to the Softrak.

1000L Bunded Fuel Tank – Double Skinned with a hose delivery with an automatic shut off & non-drip nozzle.

The bunded fuel tank allows for safe delivery to the work site. The tank sits on its own base and is placed in the back of the Softrak. The Softrak has a fixed cover to protect from most of the weather. The tank sits on a Rov Oil/Fuel spill mat which will take up any small drips.

ROV Oil/Fuel spill mat

Simply pull back Velcro seams to replace absorbent pad when full. Multiple uses from one base mat.

Dimensions = 100cm x 100cm

Weight (dry) = 3kg

Oil absorbent capacity is approximately 12ltrs per m² - this will vary depending on viscosity, specific gravity & temperature. Two internal heavy duty oil/fuel absorbent mats catch and absorb the spill. Mats are manufactured from EnviroSorb™, a highly absorbent hydrophobic (water repellent) polypropylene. Open weave, non-slip top of the mat allows easy penetration of spilt liquid.

Applications: Under ROV, crane, HPU, hoses, fuel tanks, storage drums, doorways, exits etc.
