2 Call-Off Contract Specification – Deliverables Context

SOW Deliverables Background:

- The Beta phase of the Product Information Management (PIM) platform builds directly on the outputs of the Alpha phase, particularly the service design artefacts, stakeholder research, and prototype workflows delivered. The key objective of this SOW is to transform those validated Alpha learnings into a fully functioning, user-centred, production-ready digital service. The Beta will incorporate appropriate sign-in options and security controls to ensure safe and reliable access. The end goal is to meet the Government Digital Service (GDS) Beta assessment criteria and prepares for a future public release adhering to the service standard and Technology Code of Practice to deliver a secure, scalable, and user focused digital service. The solution will prioritise the use of open-source code where appropriate to promote transparency, reusability, and cost-effectiveness.
- This engagement will result in the delivery of:
- A functional, scalable PIM Beta platform for NHS and medical device suppliers.
- Enhanced data submission, validation, and correction workflows.
- Secure, standards-based APIs for system integrations.
- Robust user interface aligned with GOV.UK and NHS design principles.
- Comprehensive user support and onboarding experience.
- Measurable improvements in data quality, usability, and stakeholder satisfaction.
- The service will be co-developed with the client team in a transparent and agile manner, ensuring deep stakeholder engagement, accessibility compliance, and alignment with DHSC infrastructure and technical capabilities to support long-term sustainability for future handover.

Delivery phase(s):

Overview of Requirement:

1. Service Development:

Build a digital platform to collate and manage medical device data from public, subscription-based, secure, and directly submitted sources.

2. User Functionality:

Enable consumers to access data via UI, download, and APIs; flag errors and request missing data- all designed and validated through continuous accessibility and usability testing. Enable providers to submit and manage data, respond to consumer requests, and link to MHRA registration systems, ensuring accessible and inclusive user experiences at every stage.

3. Stakeholder Engagement:

Collaborate with MHRA, NHS SC, GMDN, NHS Trusts, and manufacturers to co-design and validate features.

4. Design & Research:

Finalise core data fields, refine user journeys, and define workflows based on Beta insights.

5. Technical Delivery:

Build scalable databases, data pipelines, APIs, and core functions (search, flag, request, submit), with integrated security and role-based access.

6. Private Beta Cohort:

Recruit NHS users and manufacturers for pilot testing; refine based on feedback.

7. Compliance & Governance:

Implement UK GDPR-compliant data handling, governance protocols, and fraud mitigation strategies.

8. Service Assurance & Monitoring:

Conduct usability and accessibility testing, define success metrics (CSAT, data quality, adoption), and continuously improve via Agile sprints.

9. GDS Assessment & Transition:

Prepare for GDS Beta Service Assessment and support transition with full documentation and knowledge transfer. In the event the service does not pass the assessment, promptly address and remediate identified gaps to enable successful reassessment.

The Supplier shall ensure that each of the Insurances is effective no later than:

2 How to manage the insurance

- 2.1 Without limiting the other provisions of this Contract, the Supplier shall:
 - 2.1.1 take or procure the taking of all reasonable risk management and risk control measures in relation to Deliverables as it would be reasonable to expect of a prudent contractor acting in accordance with Good Industry Practice, including the investigation and reports of relevant claims to insurers;

3 What happens if the Supplier is not insured

The Supplier shall use all reasonable endeavours to notify the Relevant Authority (subject to third party confidentiality obligations) as soon as practicable when it becomes aware of any relevant fact, circumstance or matter which has caused, or is reasonably likely to provide grounds to, the relevant insurer to give notice to cancel, rescind, suspend or void any insurance, or any cover or claim under any insurance in whole or in part.

7 Insurance claims

- 7.1 The Supplier shall promptly notify to insurers any matter arising from, or in relation to, the Deliverables, or each Contract for which it may be entitled to claim under any of the Insurances. - 7.3 Where any Insurance requires payment of a premium, the Supplier shall be liable for and shall promptly pay such premium.
- 7.4 Where any Insurance is subject to an excess or deductible below which the indemnity from insurers is excluded, the Supplier shall be liable for such excess or deductible. The Supplier shall not be entitled to recover from the Relevant Authority any sum paid by way of excess or deductible under the Insurances whether under the terms of this Contract or otherwise.

 - 11.2.3 where the failure to satisfy the Test Success Criteria results, or is likely to result, in the failure (in whole or in part) by the Supplier to meet a Milestone, then without prejudice to the Buyer's other rights and remedies, such failure shall constitute a material Default.
- 11.3 The Buyer shall be entitled, without prejudice to any other rights and remedies that it has under this Contract, to recover from the Supplier any reasonable additional costs it may incur as a direct result of further review or re-Testing which is required for the Test Success Criteria for that Deliverable to be satisfied.

- 11.8 If there is one or more Material Test Issue(s), the Buyer shall refuse to issue a Satisfaction Certificate and, without prejudice to the Buyer's other rights and remedies, such failure shall constitute a material Default.
- 11.9 If there are Test Issues which exceed the Test Issues Threshold but there are no Material Test Issues, the Buyer may at its discretion (without waiving any rights in relation to the other options) choose to issue a Satisfaction Certificate conditional on the remediation of the Test Issues in accordance with an agreed Rectification Plan provided that:
 - 11.9.1 any Rectification Plan shall be agreed before the issue of a conditional Satisfaction Certificate unless the Buyer agrees otherwise (in which case the Supplier shall submit a Rectification Plan for approval by the Buyer within 10 Working Days of receipt of the Buyer's report pursuant to Paragraph 10.5); and

SECTION 1: SERVICE LEVELS (NOT USED)

1 Definitions

- 1.1 In this Section 1 of this Schedule, the following words shall have the following meanings and they shall supplement Joint Schedule 1 (Definitions):

Term	Definition
Critical Service Level Failure	has the meaning given to it in the Order Form;
Service Credits	any service credits specified in the Annex to Part A of this Schedule being payable by the Supplier to the Buyer in respect of any failure by the Supplier to meet one or more Service Levels;
Service Credit Cap	has the meaning given to it in the Order Form;
Service Level Failure	means a failure to meet the Service Level Performance Measure in respect of a Service Level;
Service Level Performance Measure	shall be as set out against the relevant Service Level in the Annex to Part A of this Schedule; and
Service Level Threshold	shall be as set out against the relevant Service Level in the Annex to Part A of this Schedule.

2 What happens if you do not meet the Service Levels

- 2.1 The Supplier shall at all times provide the Deliverables to meet or exceed the Service Level Performance Measure for each Service Level.
- 2.2 The Supplier acknowledges that any Service Level Failure shall entitle the Buyer to the rights set out in Part A of this Schedule, including the right to any Service Credits and that any Service Credit is a price adjustment and not an estimate of the Loss that may be suffered by the Buyer as a result of the Supplier's failure to meet any Service Level Performance Measure.
- 2.3 The Supplier shall send Performance Monitoring Reports to the Buyer detailing the level of service which was achieved in accordance with the provisions of Part B (Performance Monitoring) of this Schedule.
- 2.4 A Service Credit shall be the Buyer's exclusive financial remedy for a Service Level Failure except where:
- 2.4.1 the Supplier has over the previous (twelve) 12 Month period exceeded the Service Credit Cap; and/or
- 2.4.2 the Service Level Failure:
- (a) exceeds the relevant Service Level Threshold;
 - (b) has arisen due to a Prohibited Act or wilful Default by the Supplier;
 - (c) results in the corruption or loss of any Government Data; and/or
 - (d) results in the Buyer being required to make a compensation payment to one or more third parties; and/or
- 2.4.3 the Buyer is entitled to or does terminate this Contract pursuant to Clause 10.4 (CCS and Buyer Termination Rights).
- 2.5 Not more than once in each Contract Year, the Buyer may, on giving the Supplier at least three (3) Months' notice, change the weighting of Service Level Performance Measure in respect of one or more Service Levels and the Supplier shall not be

entitled to object to, or increase the Charges as a result of such changes, provided that:

- 2.5.1 the total number of Service Levels for which the weighting is to be changed does not exceed the number applicable as at the Start Date;
- 2.5.2 the principal purpose of the change is to reflect changes in the Buyer's business requirements and/or priorities or to reflect changing industry standards; and
- 2.5.3 there is no change to the Service Credit Cap.

3 Critical Service Level Failure

On the occurrence of a Critical Service Level Failure:

- 3.1 any Service Credits that would otherwise have accrued during the relevant Service Period shall not accrue; and
- 3.2 the Buyer shall (subject to the Service Credit Cap) be entitled to withhold and retain as compensation a sum equal to any Charges which would otherwise have been due to the Supplier in respect of that Service Period ("**Compensation for Critical Service Level Failure**"),

provided that the operation of this Paragraph 3 shall be without prejudice to the right of the Buyer to terminate this Contract and/or to claim damages from the Supplier for material Default.

Part A: Service Levels and Service Credits

1 Service Levels

If the level of performance of the Supplier:

- 1.1 is likely to or fails to meet any Service Level Performance Measure; or
- 1.2 is likely to cause or causes a Critical Service Failure to occur,

the Supplier shall immediately notify the Buyer in writing and the Buyer, in its absolute discretion and without limiting any other of its rights, may:

- 1.2.1 require the Supplier to immediately take all remedial action that is reasonable to mitigate the impact on the Buyer and to rectify or prevent a Service Level Failure or Critical Service Level Failure from taking place or recurring;
- 1.2.2 instruct the Supplier to comply with the Rectification Plan Process;
- 1.2.3 if a Service Level Failure has occurred, deduct the applicable Service Level Credits payable by the Supplier to the Buyer; and/or
- 1.2.4 if a Critical Service Level Failure has occurred, exercise its right to Compensation for Critical Service Level Failure (including the right to terminate for material Default).

2 Service Credits

- 2.1 The Buyer shall use the Performance Monitoring Reports supplied by the Supplier to verify the calculation and accuracy of the Service Credits, if any, applicable to each Service Period.
- 2.2 Service Credits are a reduction of the amounts payable in respect of the Deliverables and do not include VAT. The Supplier shall set-off the value of any Service Credits against the appropriate invoice in accordance with calculation formula in the Annex to Part A of this Schedule.

3 Buyer redress for failure to provide Services at or above Service Levels

- 3.1 The Buyer may ask for a Rectification Plan if the Supplier fails to meet [any][OR][Insert Number] of the Service Levels ("Default") within Section 1 (Service Levels) in any 12-Month rolling period.
- 3.2 This Rectification Plan must clearly detail the improvements and associated timeframes within which the Supplier shall meet and achieve the Service Levels. The Rectification Plan must be provided in accordance with Clause 10.3 of the Core Terms and any failure to correct a Default in line with an accepted Rectification Plan, or failure to provide a Rectification Plan within 10 days of the request may result in the Buyer exercising its right to terminate the Contract in accordance with Clause 10.4 of the Core Terms.

Annex A to Part A: Services Levels and Service Credits Table

[Guidance Note: The following are included by way of example only. Procurement-specific Service Levels should be incorporated]

Service Level Performance Criterion	Key Indicator	Service Level Performance Measure	Service Level Threshold	Buyer redress for Failure to provide Services at or above Service Levels
Accurate and timely billing of Buyer	Accuracy /Timelines	at least 98% at all times	[]	0.5% Service Credit gained for each percentage under the specified Service Level Performance Measure
Access to Buyer support	Availability	at least 98% at all times	[]	0.5% Service Credit gained for each percentage under the specified Service Level Performance Measure

The Service Credits shall be calculated on the basis of the following formula:

[Example:

Formula: $x\% (\text{Service Level Performance Measure}) - x\% (\text{actual Service Level performance}) = x\%$ of the Charges payable to the Buyer as Service Credits to be deducted from the next Invoice payable to the Buyer

Worked example: 98% (e.g. Service Level Performance Measure requirement for accurate and timely billing Service Level) – 75% (e.g. actual performance achieved against this Service Level in a Service Period) = 23% of the Charges payable to the Buyer as Service Credits to be deducted from the next Invoice payable by the Buyer]

1.2 The purpose of the Balanced Scorecard is to promote contract management activity through measurement of the Supplier's performance against KPIs. The Buyer and Supplier shall agree the content of the Scorecard before the Call-Off Contract Start Date including the Material KPIs as defined in Framework Schedule 4 (Framework Management). Targets and measures to be listed in the Scorecard (example above for guidance only) should be tailored to meet the Buyer's needs and the Supplier's competences.

1.3 The recommended process for using the Balanced Scorecard is as follows:

Framework Schedule 6 (Order Form, Statement of Work and Call-Off Schedules)

This Schedule sets out the characteristics of the Deliverables that the Supplier will be required to make to the Buyers under this Call-Off Contract.

Overview:

Off-payroll (IR35) determination	Contracted out service: the off-payroll rules do not apply
Summary of the work	To use the learnings and recommendations from the alpha phase to develop a digital service for collecting and providing medical device data. This digital service aims to improve access to medical device product information for those in the health sector who need it. The service should collate medical devices data from multiple sources (a mix between free, publicly available data, subscription-based data and secure data) and collect data itself. It should enable data consumers to access data via a range of means, including a user interface, downloads of data and API access, enable data consumers to flag data errors and request missing data and enable data providers to proactively submit data directly to PIM, update regulatory data by guiding users to the MHRA Device Registration Service, respond to data consumers' error flags, and respond to data consumers' requests for data. Some of the activities required are detailed in the beta roadmap and the technical backlog (available upon request). Activities in the first instance will include engaging with key stakeholders (including MHRA, NHS SC, GMDN, NHS trusts and medical device manufacturers), further research to identify core standard data fields, design and build database and data pipelines, recruiting private beta cohort, designing, testing and building core functions (like search, flag errors, request missing data, add data), establishing data protection and governance principles and processes and building approach to protecting/mitigating against fraudulent activity. After building and trialling the service with the private beta cohort, activities will include refining all previous steps, ongoing usability testing, accessibility audits, defining and implementing analytics, designing and building APIs, conducting and passing the beta service assessment. Example research in private beta may include interviews, workshops, and surveys for issues where more knowledge

	is required as well as usability testing of prototypes. Public beta will include research activities like satisfaction feedback surveys, analytics data reviews and continuous usability testing for new features. We require our provider to supply all hosting arrangements including both sandbox and live development environments. The service will need to be designed to be shiftable to another hosting environment and to use opensource code. During this contract we will require small scale back-office, help desk style support to support user. We would like this to be supplied by the provider during this stage so feedback can be fed into service development. The supplier will not be expected to support the service over the life of the service or beyond the length of this contract. All licences and software used for the duration of this contract will need to be accounted for in the specified

About the work:

Why the work is being done	This work is being done to improve the accessibility and quality of medical product data that is currently dispersed throughout the healthcare system in the UK. This is one of the aims of the Department of Health and Social Care's Medical Technology Strategy (https://www.gov.uk/government/publications/medical-technology-strategy) which sets out how the department will ensure the health and social care system can reliably access safe, effective, and innovative Medtech. Priority 3 of the strategy, titled 'Enabling Infrastructure', emphasises
----------------------------	---

	the need for improving Medtech data standards and encouraging proactive data collection. It also highlights the need for a common product language, standardised product information, improvements to be made in data systems, and a collaborative role between DHSC and industry. This work is also listed as a key initiative of the strategic framework for NHS commercial (https://www.england.nhs.uk/long-read/strategic-framework-for-nhs-commercial/#digital-and-transparency) under the digital and transparency pillar. This work also supports the current government's health mission of shifting from analogue to digital to aid efficiency across the NHS. The need for this work has been emphasised repeatedly in our discussions with stakeholders including NHS Trusts, the MHRA, NHS England, and the wider MedTech industry and has existed as early as 2014 when it was referenced in the NHS eProcurement strategy (https://assets.publishing.service.gov.uk/media/5a7ebfa3e5274a2e8ab47f34/NHS_eProcurement_Strategy.pdf). A shared reference system for exchanging product data will help support the supply chain, patient safety and inventory management needs of NHS Trusts. Making high quality, trusted, key medical device product information more widely available will also support the healthcare system to meet other initiatives. For example, the NHS England Medical Device Outcome Registry initiative that aims to more comprehensively track devices that are implanted into patients. Similarly, this work will help Trusts meet NHS information standards like DAPB4004 (https://digital.nhs.uk/data-and-information/information-standards/information-standards-and-data-collections-including-extractions/publications-and-notifications/standards-and-collections/dapb4004-global-medical-device-nomenclature-gmdn). The work also aligns with the 'collect once, use often' approach to data as recommended by the Independent Medicines and Medical Devices Safety Review (https://www.immdsreview.org.uk/Report.html) and will help bring the UK MedTech system in line with international efforts, as both the USA (https://accessgudid.nlm.nih.gov/) and the EU (https://ec.europa.eu/tools/eudamed/#/screen/search-device) have launched similar systems.
--	---

	The MHRA are undertaking medtech regulatory reform, which will include provisions to require devices registered for use in Great Britain to have a Unique Device Identifier. Through increased coverage of UDIs for medical devices and improved transparency via PIM, it will make it easier to augment datasets together. This will help with other data initiatives across the health sector including NHS Supply Chain's National Equipment Tracking Information System and the NHS England's Spend Comparison Service.
Problem to be solved	Medical technology (Medtech) is a broad field, encompassing all the equipment and consumable products used in healthcare. There is significant complexity and scale in the market, with over three million Medtech products registered for use in the UK and the NHS spending an estimated £10bn a year on purchasing devices. Data on Medtech products is of poor quality and is dispersed throughout the healthcare system. This fragmentation leads to significant inefficiencies as NHS trusts make multiple and repeated information requests to suppliers. Trusts often receive only partially completed information which can have severe patient safety implications and lead to wasted/inappropriately used devices. At the same time, Medtech suppliers have to respond to multiple and overlapping requests, often coming in different templates that may not align with their internal business structure. Overall, this is a resource-intensive and burdensome process. This lack of data is a barrier to making effective decisions as there is no common understanding of the Medtech products currently available and being used. This can also lead to patient safety risks, as standard product characteristics, such as whether an implanted device is MRI safe or whether a consumable item contains latex is not readily available. The alpha validated that there is a user need for a single source of truth for medical devices and it is recommended that a digital service is developed that collects and provides medical device data. The developed service should collate medical devices data from multiple sources as well as collect data itself, enable data consumers to access data via a range of means, including a user interface, downloads of data and API access, enable data consumers to flag data errors and request missing

	data and enable data providers to proactively submit data directly to PIM, update regulatory data by guiding users to the MHRA Device Registration Service, respond to data consumers' error flags, and respond to data consumers' requests for data. Therefore it is expected that the beta team (among other things) - • identify core data fields • identify and access key data sources • recruit private beta cohort • design and build the database and data pipelines • design, test and build the search function • design, test and build the user interface • design, test and build the 'request missing data', 'flag errors', 'contribute data' functions • design, test and build authorisation and authentication features, functionality and workflows More detailed list of expected activities are included in the beta roadmap. Some known risks and challenges include – • a number of existing projects have overlapping user needs with PIM so need to be carefully considered and factored into the design of PIM • the long term, operational team responsible for the ownership and support of PIM have not yet been identified so the long-term technical delivery model needs to be built suitably to allow for transfer of ownership. As part of this, we require the delivery team to conduct an in depth appraisal of long term hosting options and to speak to internal stakeholders to factor in DHSC capability and technological preferences, when selecting design choices. • sufficient incentives to engage manufacturers to contribute to and update PIM data needs to be further explored and validated and has implications for the coverage and correctness of data held in PIM. • PIM needs to have accurate and comprehensive enough data for people to feel confident relying on it. • baseline benchmarks for PIM specific objectives are required to help show case the value of PIM and help to
--	--

	define and measure ongoing success of the system.
Early market engagement	Not Specified
Any work that's already been done	We completed an in-house discovery phase which involved speaking with over 25 stakeholders from across the health system to better understand user characteristics, needs, and journeys. This included representatives from NHS Trusts (patient safety, procurement, and clinical engineering teams), MHRA, NHS Scan4Safety, NHS Supply Chain, NHS England Medical Device Outcome Registry, NHS Digital, devolved governments and health bodies, manufacturers, and medical device data bodies. The pain points investigated in the PIM discovery were about medical device data being hard to find, of poor quality or missing entirely and that accessing this data is slow and inefficient for both data consumers and data providers. The discovery confirmed that there is a viable service DHSC could build that would make it easier for users to do the thing they need to do and that it is cost effective to pursue the problem. In 2024 the Alpha phase was also delivered by an external supplier. In Alpha the goal was to investigate 'how might we deliver a service that makes access to higher quality medical device data easier and more efficient'. The learnings and recommendations from this work will inform the beta stage, however additional requirements are expected to emerge/be refined during further investigation in the beta and incorporated into the build as appropriate. In Alpha, a multi-disciplinary team was used, adapting agile ways of working. The work involved user research and stakeholder engagement through a variety of methods including interviews, workshops and prototype testing. Alongside user research, a range of service design activities were used to understand the current service landscape, including but not limited to reviewing existing/similar services, creating a service blueprint of the as-is service landscape and creating dynamic prototypes of key journey. The proposed data architecture, user interface prototypes and technical architecture were also iterated throughout.

	Alpha report with key learning and recommendations, beta roadmap and technical backlog are all available on request.
Existing team	The existing DHSC team consists of an analyst, senior analyst, and head of analysis. The existing DHSC team can assist with knowledge transfer throughout the beta. In the alpha phase, the Senior Analyst took the position of the Service Owner (but the delivery team also provided a product owner) and the Head of Analysis acted as a Subject Matter Expert at times. The internal DHSC has resource to dedicate to helping the delivery team but this is likely to be between 30-50% capacity. The internal team can help with putting the delivery partner in contact with subject matter experts and key stakeholders from across health system, which includes colleagues from the MHRA who will be closely involved, particularly in areas including understanding data flows and providing architecture assurance. The beta phase does not involve working with another supplier but will involve using the learnings and recommendations from the alpha (delivered by the alpha supplier). It will also involve gathering the requirements for the long term delivery team which may involve engaging with external parties. We require the supplier to provide a temporary hosting arrangement for the duration of the beta phase. This cost is to be included in the price of the bid. The supplier will also be required to fulfil the roles of a MHRA team which should consist of subject matter experts from the business and from a technology perspective, an architect, software/data and DevOps engineers to develop the pipelines, a delivery manager to manage the relationship with the project and change management and service management to deploy the service

Work setup:

Address where the work will take place	Work can be undertaken remotely. The DHSC team have offices in London (39 Victoria Street, Westminster, London, SW1H 0EU) and Leeds (Quarry House, Quarry Hill, Leeds, LS2 7UE), should in person working arrangements take place. MHRA also have offices in London (10 S Colonnade, London E14 4PU). As we will use UK regulatory data, we require data to be kept within the UK. The solution provider will therefore be required to be UK based.
Working arrangements	The supplier's staff will be expected to be available during the typical working hours of Monday to Friday (9.00am to 5.00pm) to maximise collaboration and knowledge sharing. We require the supplier to conduct the usual agile ceremonies, weekly updates, 'show and tell' workshops, planning sessions, and any additional sessions as required. A supplier that can help develop the internal teams project delivery is also preferred. This will include producing resources and documentation of work undertaken to provide a clear record of what has been done and decisions made. We expect clear and continual communication between the supplier and the DHSC team to ensure a joined-up approach. Sessions will take place remotely unless otherwise agreed. Collaborative in person workshops may be arranged as necessary in an appropriate location. Supplier is required to cover travel at their own expense. The contract will be managed in line with DOS 6 call-off contract requirements and using DHSC's contract management guidance. By integrating the Digital Outcomes and Specialists framework guidelines with DHSC's specific contract management guidance, the call-off contract can be tailored to meet the department's unique needs while ensuring compliance with procurement regulations and best practice.
