Buyer contractual details

G-Cloud lot:	This Call-Off Contract is for the provision of Services under: Lot 3 - Cloud support
G-Cloud services required:	The Services to be provided by the Supplier under the above Lot are listed in Framework Section 2 and outlined below: Assistance with the justification of the selection of dynamics 365. Specifically, the areas that we would like to drill into, based on the previous CPS report, are detailed as follows: Solution Architecture Provider Portal ● Detail the technical architecture (including additional/shared required components such as Azure AD premium etc) required to meet the OfS Provider Portal requirements. A high-level summary of which are: ● Allow Providers to use an online Portal to securely apply for registration and submit evidence that they comply with conditions. ● Allow Providers to use the portal as an ongoing part of registration to securely provide assurance that they continue to meet conditions. ● Allow OfS to securely exchange information with the appropriate members of and HEP (status changes, documents, notifications etc) ● Integrate the Provider Portal into the Dynamics CRM, allowing the display of status against key workflow/processes in the Provider Portal. ● Allow Providers to submit returns (data, xls, word etc – including large file sizes e.g. 1GB files) to OfS securely, and with the receipt tracked, so that the confidentiality and the integrity of the information is maintained. (To achieve this, it is anticipated the Dynamics Provider Portal would have

an iFrame within to present a SharePoint interface. This or other suitable options should be detailed in terms of architecture and implementation effort.)

- Automate the movement of files from the SharePoint interface, through to other OfS system (network file shares / SAS file Structure)
- Automate update of information in Provider Portal /Dynamics CRM when information is returned to SharePoint containers.
- Notify HEPs of their requirements through emails/notifications when deadlines are approaching / actions are required.
- Provide a facility for students and other interested parties to submit institutional-level complaints against a provider (Unsatisfactory Quality Scheme (UQS) and Public Information Disclosure (PID)). – Anonymous users.
- This is effectively expanding the findings in Mike's report and taking them to the next level of detail i.e. to describe how this should be approached, the pro's and con's of different approaches and the effort and timescales for each approach.
- In the same manner we would need to detail this for Dynamics 365.

Solution Architecture Dynamics 365 CRM

- Detail the technical architecture (including additional/shared required components such as Azure AD premium etc) required to deliver the OfS CRM requirements:
- OfS needs to be able to efficiently record interactions with prospective as well as registered providers
- OfS needs to be able to determine the impact of interactions with registered providers on their status and have the means to communicate internally
- OfS needs to be able to know which of its officers are liaising with a registered provider and for what purpose
- OfS needs to be able to display the status of a registered provider to its staff
- OfS needs to be able to display the structure of a registered provider and show any changes to structure or contacts over time
- The CRM needs to integrate with the Workday HR and Finance ERP platform.
- The CRM needs provide the information for the Register (Register

	integration) ● The CRM needs to provide Single Signon for OfS users ● The CRM needs to workflow manage the core OfS regulatory processes (facilitating 'off system' processes such as data analysis, and receiving the outcomes as required) ● There needs to be the ability to provide a range of reports from the CRM information (realtime / operational reports, reports on provider information / status, analytical reports including trends and indicators etc) – The solution architecture should propose suitable technologies including in-built Dynamics reporting; Power BI; Extracts for other system reporting – e.g. Tableau. Records Management ● Detail the mechanisms /method /architecture / effort required to apply high-level corporate Records Management and GDPR requirements to entities and information stored in Dynamics 365, and Dynamics Provider Portal (including the SharePoint interface). Develop Implementation Plan ● Implementation Approach for the proposed solution architecture ● Estimated Costs (components and licenses) ● Estimated Effort (timescales / delivery plan and timeline, and resource FTE) Review / augment the solution options analysis ● Dynamics vs Siebel vs Salesforce vs Pegasystems
